30-Jun-2025 Ms Carolyn Fitzpatrick (CF) Pollokshaws Medical CentreMain Surgery

Comment Comment 0501766405 - S Mcd - patient presented in pharmacy looking for something for UTI - in May she had pivmecillanam, after a course of trimethoprim. She is also diabetic. She does not have any pain on passing urine. Or feel an urgency to pee. She is saying her kidneys / back sore, feels sick and urine smells - I have advised her that I would let you know, as her symptoms exclude her from pharmacy service, and that she should refer contact the surgery

16-May-2025 Dr Steven Halliday (HALL17390) Pollokshaws Medical CentreMain Surgery

History **History** needs diabetes nurse review please - please arrange
Subjective: C/O UTI sx. Prev 2 courses trimethoprim. No improvement.
Sx: freq urination, HA, vomiting, sweating, post-void heaviness. No dysuria.
Sx ongoing "for ages". Bed wetting x2.
T1DM. On insulin 30u AM, 28u PM. Not taking metformin - makes her sick.
Not checking BG. No DM review 4 yrs.
Drinking 5L water over 2 days. Very thirsty.
Objective: BG 19.6.
UA: glycosuria. No ketones, protein or blood.
Assessment & Plan: T1DM - poor control.
BG elevated at 19.6. Advised to check BG regularly.
Consider insulin dose increase if BG consistently >15. Suggested 32u AM, 30u PM if BG remains high.
Contour Plus test strips prescribed. Advised re: link between hyperglycaemia and UTI sx.
?UTI. UA NAD except glycosuria.
MSU sent. Will call pt if infection confirmed.
Advised re: fluid intake

New Referral New Referral 8H...: Referral for further care (SCI
Gateway Referral)

01-May-2024 Nurse Elaine Neilson (EN) Pollokshaws Medical CentreMain Surgery

Comment Telephone encounter with Sharon re latest Hba1c. Says
she is now concerned about her diabetes, did not take it
seriously before but wants to feel better than she does
now. Discussed how to manage this, whether increasing
insulin herself or referring back to DSNs. I would be
concerned about her adjusting insulin doses as she
refuses to check sugars at all. She says if I refer back to
DSNs she will definitely engage. Also discussed diet
again, says she knows she needs to change drastically,
discussed making gradual changes over the next few
weeks so that she does not relapse with this. I will refer
back to DSNs and let Dr Halliday know the plan at the
moment.

01-May-2024 Dr Steven Halliday (HALL17390) Pollokshaws Medical CentreMain Surgery

History **History** hba1c 108. does need follow up prior to removal from list - discussion with her re compliance with insulin and checking blood sugars...can this be done better and repeat hba1c in 3mths or does she need referred to community diabetic nurses - problem being last appt there was 2018 and dna all since...would she engage with them...will also liaise with elaine about whether we can work with her ?relationship developing that will allow her to not dna all the time or be inappropriate...

01-May-2024 Dr Steven Halliday (HALL17390) Data Entry

History **History** likely remove from list - had clear warning letter and then missed appt again....await til I have spoken to elaine and sorted plan for diabetes.

30-Apr-2024 Ms Amanda McGoran (AM) Data Entry

Comment **Comment** Please see Nelly's comment 25.04.24. Patient missed another 30 min appt with the nurse. Came in 2 hours after appt time to check. Nelly has said she gave patient the appt details twice. Now had 3+ DNA's and a letter re behaviour.

29-Apr-2024 Nurse Elaine Neilson (EN) Pollokshaws Medical CentreMain Surgery

Problem **Problem** Type 2 diabetes mellitus
 Comment **Comment** Discussion with Sharon. She was supposed to get her Hba1c checked at the hub but did not do this. Still taking Humulin MR 30 units am, 28 pm, and Metformin 1g BD (had stopped this in Jan but restarted). Diet is dreadul, living on ice cream, chocolate, biscuits etc. Wondering why she feels so terrible and has constant thrush. Advised she must cut down her refined sugar intake. Thinks she also has a UTI, will provide sample while here. Refusing to check blood sugars although she knows she should be checking due to insulin. Hba1c kindly taken by Dr Panesar as Sharon not keen for me to try. Await Hba1c result.

25-Apr-2024 Mrs Neelam Kaur (NK) Pollokshaws Medical CentreMain Surgery

Comment **Comment** Patient came in 2x to fid out time of review appointment with nurse, I had written this down for patient both times but still missed appointment. A new appointment has been given I have written this down for patient

Patient Letter - GP Partners

25-Feb-2024 Dr Steven Halliday (HALL17390) Pollokshaws Medical CentreMain Surgery

History **History** Please send letter to Sharon containing the following from all partners - All the staff in the practice want to try and help and we understand you are having a difficult time at the moment. We want to work through one issue at a time and see if we can put a plan in place to improve the situation. There have been problems at recent consults as you have been getting agitated and frustrated and also not been in a frame of mind to follow up on plans made. Some of the consults have made the doctors feel a little threatened and concerned by your behaviour. You have also missed a few appointments with nurses and doctors. The best way forward is that when you come to the practice you are sober and calm and we will most likely be able to help with several issues. If however this is not the case again or you miss any further appointments in the next 12 months then we will remove you from the list as it better you find a different practice.

23-Feb-2024 Mr David Cooper (DC) Pollokshaws Medical CentreMain Surgery

Medication **Medication** Mirtazapine Tablets 45 mg 28 TABLET ONE TO BE TAKEN AT NIGHT

22-Feb-2024 Mrs Neelam Kaur (NK) Pollokshaws Medical CentreMain Surgery

Comment **Comment** Pharmacy Request - Cattersons have handed in a script for Methadone 1 Mg/MI Oral Solution has a note on its saying send back to practice should have been Mirtazapine 45mg tabs - Methadone script has been cancelled as per catterson request, pls issue Mirtazapine 45mg tabs

History **History** again went direct to voicemail.

20-Feb-2024 Dr Steven Halliday (HALL17390) Telephone Consultation

History **History** phoned left message saying that I was checking in with her as consult yesterday dysfunctional...keen to make plan for investigation of vomiting and ?weight loss...i said I would try one more time today.

19-Feb-2024 Dr Steven Halliday (HALL17390) Pollokshaws Medical CentreMain Surgery

History **History** FY2 consultation reviewed - I will phone tomorrow and check in when sharon is hopefully not intoxicated by drugs...some concerning features although consult was about physical sx and threat re harming self seems to have come when getting frustrated and perceived lack of progress. I considered the options and from discussing with dr walton it is clear that Sharon is unable to engage properly re a risk assessment due to intoxication. she has as documented had option of cdrs as recommended and declined. She has had a mental health assessment today she also states which as per letter 7th feb is likely from her own adrs team as they were contacted however they conclude she is at risk of harm due to illicit substance misuse ongoing. however as above I will phone tomorrow to check in with her re her expectations. depending on that consult may require warning letter re unacceptable to present in intoxicated manner and be quite agitated and aggressive during consult....dr walton was concerned about potential for erratic aggression during consult.

19-Feb-2024 Dr Hannah Walton (HW) Pollokshaws Medical CentreMain Surgery

History	<p>History Sharon voiced multiple unrelated problems during the consultation and was very difficult to assess. Difficulty holding logical conversation and jumping from topic to topic. ? under the influence during our consultation and aggressive throughout - getting up to pace the room, throwing clothes down, tensing arm and making a fist etc. Been feeling nauseous since Christmas and has had less appetite. Vomiting couple of times a day usually morning time - states started at Christmas time. Struggling to sleep. Painful abdo - central abdo pain - I/M. Feels it is anxiety-related. No changes to bowels. No PR bleeding. No dysuria. Not sure about any frequency. Feels has lost weight. Sharon repeatedly said that nobody is doing anything to help her and that she was going to change GP practice. Stated that she now knows why her sister took her own life. Said that being in this area has brought up some difficult memories for her. History taking and assessment was very difficult due to erratic manner. Pins and needles in side of left foot - feels it in 3rd-5th toes and lateral border of foot. Gradually progressed over past 5-6 years. Feels leg swells up after walking++. Some low back pain for a couple of days. Blood glucose sitting at 11 on Saturday. Thinks has lost 2 stone in the past 2 months. States she had a mental health assessment today in Pollock - struggling with anxiety and past trauma. Sharon stated it was organised by herself? I advised that many of her symptoms could be due to poor diabetic control and we need further investigations to find out what is causing symptoms. Advised Sharon that we would need bloods and made appointment for this on Thursday. Sharon was angry that bloods could not be taken now. At the end of the appointment Sharon asked 'what about my mental health?'. Advised Sharon that we can make another appointment this week to discuss it. I note that Sharon was assessed by telephone by MHAU at Leverdale on 03/02/24 who referred her to CDRS. They noted that Sharon's speech was slurred on the phone but she denied being under the influence of any substances. CDRS made contact the same day and Sharon declined support and reported her current distress was managed well. Sharon has no recollection of this telephone call today. Tried to discuss the possibility of contacting CDRS again to refer Sharon but Sharon not engaging in this conversation. Sharon threatened to kill herself and said we were not doing anything to help her. Consultation ended when Sharon aggressively stormed out of the room.</p>	
Examination	SpO2 - Oxygen saturation at periphery Sweaty during the consultation. Temp 36.3, , HR 70, BP 112/80. Abdo generally tender but soft. No peritonism. ? some shifting dullness	98 %
Social Comment	<p>Social Comment Denies any alcohol use. Imp: Incredibly difficult to assess Sharon due to erratic manner. I suspect she was under the influence of substances during the appointment. Poor diabetic control - HbA1c 93 in Nov 22 and no bloods since then. Has DNA'd appointments with diabetic nurse. ? symptoms related to diabetes. Would like to organise full panel of bloods, unsure if Sharon will attend for these. Plan: ? refer to diabetic nurses although I don't feel that Sharon would engage. Bloods. Will discuss with GP supervisor</p>

Comment **Comment** She wasn't wanting seen she wants mirtazapine started again said she should never have changed. Offered phonecall but she said she just wants prescription.

17-Jan-2024 Dr Elizabeth Jones (EJ) Data Entry

Comment **Comment** Sharon was seen 2 days ago with these same issues - vomiting, mental health, medication. Unless feeling a lot worse than 2 days ago I do not feel we need to see her again so soon

17-Jan-2024 Ms Carolyn Fitzpatrick (CF) Pollokshaws Medical CentreMain Surgery

Comment **Comment** dr krishna from ADRS phoned, seen patient today and she is really struggling with her mental and physical health, not eating and vomiting, says the change from mirtazapine to sertraline does not agree with her - call dr krishna on 07834208641 if you wish to discuss, new number for patient updated

17-Jan-2024 Dr Nihala Haque (NH2) Data Entry

History History See Elaine nurse comment. Script done
 Medication Medication Clotrimazole Cream 2 % 20 gram APPLY
 THREE TIMES A DAY
 Medication Medication Clotrimazole Pessary 500 mg 1 PESSARY
 ONE TO BE INSERTED AT NIGHT

17-Jan-2024 Nurse Elaine Neilson (EN) Pollokshaws Medical CentreMain Surgery

Comment Comment See Dr Haque's entry yesterday- Sharon was symptomatic when she attended last week, pv itch and increased discharge. Had been using OTC Canesten cream with no effect. Have put in message slot re script.

16-Jan-2024 Dr Nihala Haque (NH2) Data Entry

History History I have sent result to Elaine nurse to see whether she had any PV symptoms like itch/increased PV discharge. See lab result that 20% women are asymptomatic with yeasts so no need to treat unless symptoms. I think main concern was regarding STIs

15-Jan-2024 Dr Jasmeet Singh (JS) Data Entry

History History GPST1 consultation reviewed

15-Jan-2024 Dr Michael Smith (MSM) Telephone Consultation

History History Difficult onult, patient changing her story a lot. Initaly starts by saying that she wants to go back to her mirtazpaine tablet - note changed by DC just last week with patient hvaing poor compliance and not really helping, but now she tells em she does take ir egualry and it did work. Tells me that she has felt rubbis sicne starting sertraline and thinks it is caused by this - describes intally being sick with vomiting for the past week, but actaually it turns out this vomiting has only been from this monring. she does describe sx in keeping with viral illness - myalgia, lack of energy, geernlly feeling tired and achey with a globally sore head. she has been reduced appetite the past wek as cant be bothered making food and no appetite, but she has been drinking liquid inc lucozade and juice. she was howeer able to attend her chemist to colect her metahodne this past week (three times a week). No diarrhoea. Vomiting started today. No fevers. IF have encouraged patient to reduce her insulin dose by some - she told me she reduces by 4 units per dose when unwell, agreed with her to do this. I also encouraged her to start checking her BMs as she does not do this.

Examination Examination sounda a bit slurred on the hpone, but she deneis any alcohol or illicit substance use. Is aksing me to fix her at the hospital - I explained I do not think that is necessary

Comment Comment feeling unwell likely due to viral illness, now with less than 12 hours of vomiting. I have encoiuraged to drink plenty of sugary liquid and eat small dry food to start her off. I have advised to reduce insulin dose and monitor BMs. worsneing advuice givne - to get back in touch if not able to keep anything down at all.

Problem Type 2 diabetes mellitus
 Comment **Comment** In for T2DM r/v. Not great today. Says stopped Metformin for 3 weeks as she thought it might improve the pins and needles in her feet, has now restarted. Taking Humulin M3 30 units am, 28 units pm. Still not checking sugars, given another new machine today, I will send script to Cattersons for strips /lancets. Refused foot check, wants nails cut, explained we don't do this in practice. Main issue is pv thrush, prob caused by high sugars. Has also recently had UPSI with someone who she says sleeps around- will self swab whilst in surgery today. 1 attempt at taking blood for Hba1c, unsuccessful and refused to let me try again. Says will attend the hub, I doubt she will but given number and Hba1c requested.

Problem History	Problem ? UTI and under the influence of alcohol/drugs History See DocMan. Wished to talk about her diabetes but no Nurse appts today so booked with me. Withdrew consent for video recording shortly after arriving. Very difficult historian, appears to be under the influence. Note hx alcohol and drug abuse. Patient urinated shortly after arriving in the room and then sat down on fabric chair. Says over last 2 days it just comes away from her but she wanted me to see it as embarrassed by it. Thinks it is her diabetes. Going to toilet more often during the day and night. No dysuria. No abdo pain. No temp. No haematuria. No cloudiness. Sexually active, has mirena coil in situ. Says she has sex with men she shouldn't Not coerced. Signposted to Sandyford for sexual health screen. Says her stomach is bloated. No further hx possible.
Examination	Examination Pale blue jeans became stained with urine shortly after start of consult. Very strong, concentrated and foul odour. Patients' behaviour is erratic. Pacing about room, slightly off balance, speech a little slurred and tearful. Not able to converse normally.
Comment	Comment To provide specimen for dip and MSU. Patient declined Abx until urine is tested. Explained I can dip it today and prescribe if I suspect UTI. Will send to Pharmacy if the case. Will check bloods. Will need chair disposed of - advice sought.

Medication Medication Lyclear Dermal cream 5 % 60 gram TO BE USED AS DIRECTED

13-May-2022 Ms Carolyn Fitzpatrick (CF) Special request

Comment Comment We received a prescription for SM 0501766405 for permethrin cream rinse 1% scalp application, dated 12/05/2022. We believe the item was prescribed in the wrong formulation, as it is to be used on the body. Could you please change it to permethrin 5% dermal cream (Lyclear) 30g? The instructions for administration would be the same, and the quantity needed for two applications would be 60g (2*30g).

Thanks,

Kind regards,

Catterson Pharmacy

12-May-2022 Dr Amy Hudson (AHUD) Pollokshaws Medical CentreMain Surgery

History History Tel call back to sharon to clarify about trazodone - I had overlooked that had been prescribed 300mg once daily and ideally needs reduced before stopping this. Sharon says for several weeks has not been taking trazodone and picked it out of the blister pack. Says that did try and put self back on this 4 weeks ago but this resulted in the "psychadelic experience" - discussed that the street pills may well have caused this which she was accepting of. Still not wishing trazodone and keen to try mirtazapine, previously had this and increased by 15mg daily. Start at 15mg OD mirtazapine at present, coming next week for f2f r/v anyway. Cattersons phoned and they will take trazodone out of blister pack.

12-May-2022 Dr Amy Hudson (AHUD) Pollokshaws Medical CentreMain Surgery

History	History Tel consult. Several issues:
1. Mood issues - has been on trazodone for some time, says does not like this and thinks is having the opposite effect regarding mood. Says gave her a "psychedelic feeling" however not sure how much of this is related to other substances, says had been using "street pills". Known to ARDS and has frequent contact with them, says waiting for IP stabilisation. Says had issues before as was being blackmailed by an individual not known to her. Says has now stopped. Denies any alcohol intake. Denies any TOSH/suicidal thoughts. Says stopped propranolol of own accord. Keen for mirtazapine, says had before and keen to retry this.
2. Intermittent leg swelling - says is L leg. Note attended QEUH end Apr with ?DVT - no clinical exam findings of DVT. Says swelling comes and goes, has pain up medial aspect of leg, no knee pain, says relative had arthritis and wondering if this. Able to weight bear.
3. Itching skin + ?rash - treated for scabies a month ago. Says treatment did help, but has come back and now feels that toes are itchy. Says was at someone else's house and turned lights on and could see black insects everywhere which "looked like nits",, says was scared to sleep on the bed after this.
Comment	Comment Imp: can try mirtazapine, say thinks trazodone in blister pack - I will phone cattersons and ask to take this out however need to reduce to 150mg then can start mirtazapine. Happy to have mirtazapine outwith blisterpack, agreed 2/52 supply first to see if happy with this.
Coming for bloods next week for Hep c viral load -recently diagnosed and due to start treatment. Agreed f2f with me before blood test to examine leg and have a look at skin, for further rx with permethrin in meantime - advised on how to take this. worsening statement given
Medication	Medication Permethrin Cream rinse 1 % 118 ml APPLY ONCE WEEKLY FOR 2 DOSES TO WHOLE BODY THEN WASH OFF AFTER 8 HOURS
Medication	Medication Mirtazapine Tablets 15 mg 14 tablet ONE TO BE TAKEN AT NIGHT

Comment Comment as below - keen for further abx as half of her last course were thrown out by mistake - see rx - she will hand in further sample also
 Medication Medication Nitrofurantoin M/R capsules 100 mg 6 CAPSULE ONE TO BE TAKEN TWICE A DAY FOR 3 DAYS

23-Dec-2021 Dr Sarah Henry (SH) Pollokshaws Medical CentreMain Surgery

History History Yellow telephone consult (today) - suitable for any GP/ANP/GPST3/FY2 (looked on portal, sample not processed as under 10mls)

23-Dec-2021 Miss Niamh Molloy (NIA) Pollokshaws Medical CentreMain Surgery

Comment Comment Ms McDonald phoned up to find out if the results for her urine specimen were back. I told her unfortunately not. She informed me that her symptoms are still epsisting and that she was unable to complete her course of antibiotics as someone threw away three of her antibiotics. Can be contacted any time on her mobile

17-Dec-2021 Dr Nihala Haque (NH2) Telephone Consultation

History History Thinks she has a urine infection. Has type 2 diabetes. Since last Sunday not felt great. On Sunday night says she was hallucinating. Also past few days colour of urine changed- more orange. Unable to pass urine properly. Also smell ++ from urine. No fever or vomiting, See urinalysis - positive nitrite/leucocytes/blood. MSSU has been sent.
 Comment Comment Cover with 3/7 Abx. Push fluids. If MSSU result shows she needs a different Abx we will be back in touch.
 Medication Medication Nitrofurantoin M/R capsules 100 mg 6 CAPSULE ONE TO BE TAKEN TWICE A DAY FOR 3 DAYS

History History psych phoned pt but she said she was on her way to AE

20-Sept-2021 Dr Sarah Henry (SH) Pollokshaws Medical CentreMain Surgery

History History Spoke to Psych on call - realyed story below. they will call pt on mothers mobile

20-Sept-2021 Dr Sarah Henry (SH) Telephone Consultation

History **History** Spoke to Sharon and her Mum Margaret who she is with. were out in a taxi together when I called. at weekend sharon was assaulted, went to stay with her mum for safety. last night mum found her with a belt around her neck, trying to hang herself but could not find anywhere to take the weight. States has been feeling suicidal since last week. says her daughter (adult) witnessed her putting a knife to her own throat. Feels unhappy that she has not been successful in killing self. I asked how her family would feel if she was dead but she says sh'doesn't care' and 'she will do it' if she does not get help. I think her sister may have committed suicide. Lives alone. Is going to become a grandmother but does nto care about this either. denies drugs/alcohol. says takes 15 valium a day and is on detox from CAT - worker is Janie Rooney. Also in the fight has somehow damaged an acrylic nail that she is worried this may be infected, says hand swollen, says she also has sore arm from attack but does not feel it is broken. offered 2 options 1. attend AE to see to injuries and they would most likely also arrange emerg psych assessment or 2. I couod speak to psych directly. following discussion with her mum this is what she wishes. She was unabel to tell me why she wants to kill herself. I have left my details with MHAS via consultant connect and they will get back to me

20-Sept-2021 Ms Kirsty Carmichael (KC) Pollokshaws Medical CentreMain Surgery

Comment **Comment** Mum Margaret McKenzie called, patient is expressing suicidal thoughts, she found her last night with a belt round her neck. Was attacked last night, phone stolen. Cover in cuts and bruises also had acrylic nails on one is embedded into her nail//finger is diabetic so worried this may become infected. Mum worried ++ Asking if GP can call to speak with Sharon .. Please call 07444219373.

23-July-2021 Dr Jasmeet Singh (JS) Data Entry

History **History** FY2 consultation reviewed

23-July-2021 Dr Andrei Klein (AK) Pollokshaws Medical CentreMain Surgery

Problem **Problem** Generally unwell
 History **History** She presents with a 2 day history of sudden onset severe headache. She has been feeling quite unwell with persistent vomiting (unable to keep down any food but managing some fluids), photophobia, dizziness, L earache, sore throat and polyuria.

She has a background of T2DM on insulin and has not taken her insulin in 2 days. Other PMH includes previous IVDU (on methadone, last injected 1 year ago), previous alcohol excess (denies drinking at present) and Hep C.

Obs - HR 97, BP 107/79, sats 98%, temp 37.4. CBG 7.8.

On examination she is displaying some photophobia but is moving her neck freely, no rashes. PEARL, CN 2-12 intact. She has redness in her L external ear canal. Chest is clear. HS pure. Abdo soft with generalised tenderness.

I suspect she may have a viral URTI or possibly a UTI but given the history of sudden onset severe headache with vomiting and photophobia I would be grateful for assessment in hospital to exclude meningitis.

 Comment **Comment** IMP - ?viral URTI/?UTI, given history need to exclude meningitis. PLAN - Emergency admission to QEUH - called IAU and accepted, referral sent. Sharon will get a taxi to QEUH via her house so she can pick up essentials for overnight stay.
 New Referral **New Referral** 8H2.: Emergency hospital admission (SCI Gateway Referral)

23-July-2021 Mr David Cooper (DC) Telephone Consultation

History **History** Spoke with Sharon she is describing vertigo sx for the past 2/7 associated with otalgia (no d/c) and headache (non-specific). She had her first astrazenaca vaccine 4/52 ago. . Also c/o low back pain (?chronic mech LBP). She feels this is entirely unusual and feels like the worse flu she has ever had. No cough / sob / anosmia / cp / fever /vomiting / rash. No trauma / injury. Does not know her blood sugars for today
 Examination **Examination** sounds distressed via tel call
 Comment **Comment** given sudden onset for examination

Comment Comment Urine dip Leuk ++, Nit -, Protein +, Blood +++, Ketones -, Glucose +++++
 Comment Comment Treatment as below. Worsening advice given.
 Comment Comment Discussed copper coil. She says lasts 5 years and she would like it removed, can still feel the strings. When discussing further contraceptive use says she would like the copper coil again. Advised to visit the sandyford for this. I will call next week with the results of the swab and we will book her in to see Dr Molloy for removal of coil.
 Comment Comment Due to the amount of glucose in her urine she needs a diabetes check when the infection settles. Will discuss an appointment next week when I call her.
 Medication Medication Nitrofurantoin Capsules 50 mg 12 CAPSULE ONE TO BE TAKEN FOUR TIMES A DAY FOR 3 DAYS

25-Sept-2020 Dr Brigid Molloy (BM) Data Entry

History History FY2 consultation reviewed

25-Sept-2020 Mr Jennifer Yau (JY) Telephone Consultation

History History says phoned at start of week for Abx?
 History History Prone to UTI due to diabetes. 2/52 Suffering from frequency, feeling a bit unwell, urinary incontinence, foul odour, cloudy. No dysuria. Mild suprapubic pain. No flank pain, says shredded kidney due to kidney infections. Last UTI about 3 months ago. Denies fevers, shivery, no vomiting. Says changes in (brown) vaginal discharge, says need copper coil removed (says has had for 7 years) and asked Sandyford if they can remove it but they have no knowledge of it being inserted. Last had 2 nights ago and lasts a couple of days. Occurs before period. Unsure of how often this occurs per month. Last period was 3 weeks ago. Denies weight loss, night sweats or fevers. Sexually active. Previously homeless.

Comment Comment Will come down to practice today for urine sample and vaginal swab. I will dip urine today and if positive will give Abx. Send off MSSU and vaginal swab. Worsening advice given re fevers, shakes, vomiting to call OOH or 999. Knowns to stop metformin if vomiting.

25-Sept-2020 Mr Jennifer Yau (JY) Special Requests

Comment Comment Pt not on any of these medications? Is this for the correct patient?

25-Sept-2020 Ms Julie Burns (JB) Pollokshaws Medical CentreMain Surgery

Comment Comment pharmacy request: Atorvastatin 20mg, Propranolol 80mg, Trazodone 50mg

Dear Dr Chong,

Sharon McDonald; D.O.B: 05/01/1976; CHI: 0501766405
Turning Point Scotland, 218 Bath Street, Glasgow, G2 4HW

Sharon attended the Urology Clinic this morning. She is feeling much better in herself and has the support of a Care Worker.

Her urinalysis today showed glucose only. She has normal renal function and CRP. Her HbA1c is awaited. She has review at the Diabetic Clinic on 29 11 2017. She is currently awaiting a follow-up ultrasound scan. If this proves satisfactory then no routine follow-up at urology is planned.

Yours sincerely

MR A JAMES

Consultant Urological Surgeon

HbA1c 113

Dear Dr Muir

**Re: Ms Sharon McDonald (D.O.B. 05/06/76)
Flat D9, 30 St. Vincent Terrace, Glasgow, G3 8UT**

The above named lady was referred to North West Community Addiction Team by Addiction Worker, Willie Colclough. Due to Sharon's chaotic attendance and continued use of illicit substances on top of her methadone prescription whilst attending the Shared Care Clinic, it was felt that Sharon may benefit from input from a CAT clinic.

Sharon was reviewed by Dr Mike Simpson on 21/09/05 and her methadone prescribing has been taken over by us.

Sharon continues on a dose of 100mls of methadone, dispensed daily under supervision, with take home methadone being given on weekends only, every three weeks.

Obviously, you will be kept informed of any changes to Sharon's care.

Yours sincerely

Jacqueline McTaggart
Community Addiction Staff Nurse

Re-Sharon McDonald D.O.B. 5/1/76 of Blue Triangle Supported Accommodation
Dumbarton Rd Glasgow.

Dear DR Muir

Sharon McDonald was admitted to our unit on 10/4/96 following a full assessment of her drug use and associated life style problems.

Sharon completed a stay of 21 days and chose to stabilize her drug use with methadone which she currently receives on a daily basis from our one stop service. Her present dose is 50 mg/mls.

We are able to provide this service for a maximum of 9 weeks from the date of discharge which was 1/5/96. Following this we would commence a 3 week detoxification programme. Sharon does not feel ready for such a detox, and I would therefor respectfully request that you continue with this prescription. Please contact us if you do intend to prescribe to prevent any incidence of double prescribing.

If any further information is required, please do not hesitate to contact us.

Yours sincerely

Anne Marie Carlin

Dear Dr McKnight

SHARON McDONALD 174 HOUSEHILLWOOD ROAD G53
DOB 5.1.76

Your 13 year-old patient was admitted as an emergency to the Southern General Hospital on 18 June 1989 having taken an overdose of antidepressants following an argument with her mother. Apparently her parents had recently separated. She was seen by our psychiatrists who thought that this was an impulsive overdose. Follow up has been arranged with adolescent psychiatrists.

Yours sincerely

ADDRESS:	H53/11, 142 Shawbridge Street, Glasgow, G43 1NR	

The above named patients residing in your practice area are experiencing difficulty in securing the services of a General Medical Practitioner and have applied to the Health Board for assistance.

In accordance with Regulation 20 of the National Health Service (General Medical Services) (Scotland) Regulations 1995, the Health Board has assigned these patients to you with effect from 11 December 1995 until such time that either you remove these patients at your request or the patients transfer to another practitioner.

I regret having to write to you in these terms, but the Board is duty bound to make arrangements for the provision of general medical services for such patients, and it is always the hope of the Board that a satisfactory doctor/patient relationship will be established and your co-operation in this matter is greatly appreciated.

The Medical Records for these patients ~~are enclosed~~ will follow as soon as possible.

Yours sincerely

J.P. Henry

Dear Dr Muir

Re: Miss Sharon McDonald (D.O.B. 05/01/76)
 Flat D9, 30 St Vincent Terrace, Glasgow, G3 8UT

The above named lady is continuing to attend the North West Community Addiction Team for methadone prescribing. Since contact with this service in September 2005, Sharon has consistently tested positive for illicit benzodiazepines. On five separate occasions, Sharon has also tested positive for opiates.

Sharon has been advised that we need to be seeing some progress in her dealing with her illicit drug use. She is very defensive when challenged about this, and tends to digress onto what other clients were doing. I have advised Sharon that this tactic is not helpful and just leads to her avoiding facing up to things. She has also been advised that her attendance at Phoenix Day Care Community Rehabilitation Project would be reviewed, as her attendance has been erratic at times. I have now placed Sharon on a 7-day prescribing of her methadone. She has been advised that once we see clear urine samples, we would then progress onto 2-weekly dispensing. Sharon's current methadone dose is 100mgs of sugar-free methadone daily, dispensed under supervision, with take home for weekends.

Obviously, we will keep you informed of any changes to Sharon's care.

Yours sincerely

Jacqueline McTaggart

Dear Dr Muir,

SHARON MCDONALD D.O.B: 05/01/1976
PIMS NUMBER: 1791566

I had the pleasure of seeing Sharon in the clinic here in the Quadrangle today. She appears to be doing very well at the present time on 85mgs of methadone and tells me that she is wishing to go back to Phoenix. She was suffering from some form of upper respiratory viral infection and tells me that she is seeing your self on Thursday with regards to this. I have issued her with a prescription for methadone, 85mgs daily for 28 days, and we will see her again at that time.

Yours sincerely,

Mike Simpson

Dear Dr Muir

Re: Ms Sharon McDonald (D.O.B 05/01/1976)
 Flat D9, 30 St. Vincent Terrace, Glasgow, G3 8UT

I received the above lady at my clinic based at the North West Community Addiction Team on 5th June 2006.

Sharon was quite tearful at this appointment due to having went on holiday with peers from Phoenix Day Care where there had been substantial drug use and violence. Sharon reported that she was still using illicit Diazepam but denied any other drug use. However, urinalysis was positive for illicit benzodiazepines and opiates. When questioned regarding her drug use Sharon is vague and does not divulge frequency of use or amounts used. Sharon has now stated that she no longer wishes to attend Phoenix Day Care. I have advised Sharon that it would be helpful to have a review meeting prior to stopping this.

Sharon was issued with a 14 day prescription for methadone, 100mgs daily dispensed under supervision with take home for Saturday and Sunday.

I subsequently received a telephone call on 9th June 2006 from Sharon's key worker based at Phoenix Day Care who advised me that peers within Phoenix have alleged that Sharon has been dealing drugs from Phoenix and within her home environment. This information has been passed onto Dawn Campbell, Social Worker to Sharon's children as Phoenix Day Care were concerned as Sharon has access to her children.

Due to myself leaving my post Sharon's care has now been transferred to my colleague Community Addiction Charge Nurse, Chic Donaldson.

Obviously, you will be kept informed of any changes in Sharon's care.

Yours sincerely

Jacqueline McTaggart

Dear Dr Muir

Sharon MacDonald (d.o.b. 05/01/1976)
Flat D9, 30 St Vincent Terrace, GLASGOW, G3 8UT

I had the pleasure of seeing Sharon here at the clinic in the Quadrangle today. She appears to be doing exceptionally well and is reducing her methadone at the present time. I have given her some advice regarding dental hygiene whilst on methadone and she also expressed a wish to come and see our Sexual Health nurse with regards to some form of long term contraception. I have issued her with a prescription of 45mls for 14 days and we will see her again at that time.

Yours sincerely

Mike Simpson
Medical Officer

Dear Mrs. McDonald,

I am sorry you have been unable to bring Sharon to the Department for any of her appointments, and hope that this means the situation has settled for the moment.

I would be grateful if you could let me know if indeed this is the case, or whether you wish me to send another appointment for Sharon to attend the Department.

I look forward to hearing from you.

Yours sincerely,

R. Silvera.

NHS NO.: 623/76/068
ADDRESS: Flat 53/11, 142 Shawbridge Street, Glasgow, G43 1NR

The above named patient residing in your practice area is experiencing difficulty in securing the services of a General Medical Practitioner and has applied to the Health Board for assistance.

In accordance with Regulation 20 of the National Health Service (General Medical Services) (Scotland) Regulations 1995, the Health Board has assigned this patient to you with effect from 10 April 1996 until such time that either you remove this patient at your request or the patient transfers to another practitioner.

I regret having to write to you in these terms, but the Board is duty bound to make arrangements for the provision of general medical services for such a patient and it is always the hope of the Board that a satisfactory doctor/patient relationship will be established and your co-operation in this matter is greatly appreciated.

The Medical Records for this patient are enclosed/will follow as soon as possible.

Yours sincerely

Clinical Comments: Dear Doctor,
 Thank you for your continuing care. This 41 year old lady was admitted to GRI on 18/10/17 due to severe lower abdominal pain, several vomiting episodes and urinary incontinence. She has a background of type 2 Diabetes, hepatitis C, and is an IVDU. She reported several days of dysuria, PV discharge and loose stools following a period of constipation. Her diabetes is poorly controlled and had a random glucose level of 40. She was pyrexial at 38.8 degrees on admission and had a WCC of 9.9, CRP of 607, and a lactate of 2.5. Her renal function was also impaired with an eGFR of 41 and Creatinine of 125 on admission. A CT Abdomen and Pelvis was done and it reported acute pyelonephritis and fluid around the gall bladder. She was treated following the DKA protocol and was started on IV temocillin, amoxicillin and metronidazole, following culture sensitivities. On 24/10/17, she informed the nursing staff on ward 70 she was going to self-discharge, and before the medical staff could explain to her the risks of leaving were while she would still require several more days of IV antibiotics

Dear Dr Muir

Re: Sharon McDonald DOB: 05/01/1976

This is to advise you that I saw your patient at our Callander Street Clinic today. Date of assessment 12/01/2010.

In terms of drugs misuse Sharon tells me that she feels quite happy about her 60mls of Methadone dose. She denies any illicit heroin use at present. She tells me that she used to inject years ago, but not recently. With regards to valium or benzodiazepine use, she tells me that she usually bought 80 tablets of 5mg Diazepam and 80 tablets of 5mg to 10mg Temazepam on a monthly basis, usually probably taking 3 to 5 Diazepam a day.

It appears that her Diazepam supply dried up as she cannot buy them any longer in the street. She tells me that she has never discussed these issues with yourself. She denies any cocaine, amphetamine, acid use. Smokes cannabis on a daily basis, probably 3 to 4 joints a day. She denies any seizures or fits in past history. In terms of alcohol use, she tells me that she is teetotal.

With regards to physical health, she tells me that is type 2 diabetic, diagnosed probably 18 months ago. She has not received any treatment yet and no recent BM check was performed, probably because of her non attendance. With regards to hepatitis C, she tells me that she was tested years ago which was negative. She was offered a repeated hepatitis C testing, but she declined. With regards to hepatitis B immunisation, it appears that the history is unclear.

With regards to mental health, she tells me that she suffers from anxiety, experiences withdrawal symptoms at the moment combined with significant insomnia. She is also troubled by bereavement, as she had a few deaths in the family lately. She tells me that she has been prescribed previously for her mood disorder, probably Prozac, but that was years ago. She also tells me that she used to self-harm years ago, but no recent episodes of this. No admissions to mental health wards. Denies any suicidal or self-harming thoughts at present.

With regards to social issues, she tells me that she lives alone in her own house. She is not in debt and probably on Income Support and Incapacity Benefit. She has 2 daughters a 16 year old and a 9 year old. Both children are in foster care. She does have a Social Worker who is based in Partick

NHS Confidential: Personal data about a patient

and is called Ann Patterson. She tells me that she sees her children approximately once a month. There are no outstanding criminal justice issues at present.

Plan: We will continue to prescribe Methadone 60mgs, 14 day prescription is given today. Diazepam prescription 5mg for 5 days was given starting on the 12th. We strongly encouraged her to attend reviews by yourself to review her diabetes. She may be referred for anxiety management through us. We also advised that Momentum or Hill Street Project through Phoenix Futures would be beneficial once she is feeling more stable.

Should you need any more information, please do not hesitate to contact us.

Best regards,

Dr Sandor Hajnal
Medical Officer
West Community Addiction Team

Cc Debbie Campbell, Social Care Worker

Clinical Comments: Dear Doctor,

Sharon was admitted on 22/04/18 with dysuria and urinary frequency. She had a GCS of 14 due to taking street diazepam, and so was admitted overnight.

She has been started on a course of nitrofurantoin, and her GCS is now 15, so she is ready for discharge.

Many thanks,
 Dr Elizabeth Kennedy, FY1.

Clinical Comments: Dear Doctor
 Ms McDonald was admitted to GRI following street valium ingestion. Staff at women's refuge became concerned as patient became increasingly drowsy and difficult to rouse. Patient states she has taken over 40 street valium. Denies any other illicit drug use. Suicidal intent, stating 'didn't want to live anymore'.
 On admission patient was well. GCS 13 (E3, V5, M5) Initially hypotensive but normotensive when rechecked. Patient was observed overnight. Reviewed by addiction and liaison psychiatry. Patient became alert and orientated and was found fit for discharge.
 Kind regards
 Cory Dunnigan

Dear Dr. C Ho Chong Teck,

Sharon McDonald; D.O.B: 05/01/1976; CHI: 0501766405
99 Mansion Street, Glasgow, G22 5LL

Admission: Specialty - General Medicine; Ward - GRI Ward 46 Head Injury/General Medicine
 Consultant - Dr Allan Cameron; Date of Admission - 03/05/2018
 Date of Discharge - 03/05/2018; Discharged to - Private Residence - living alone

Diagnosis:

Poisoning by Benzodiazepines (ICD10: T42.4)

Follow Up: None**Clinical Comments:**

Ms McDonald was admitted to Glasgow Royal Infirmary following street Valium ingestion. The staff at women's refuge became concerned that she had become increasingly drowsy and difficult to rouse. She stated that she had taken over 40 street Valium but denied any other illicit drug use. On presentation she stated that she had suicidal intent, saying she 'didn't want to live anymore'.

On initial examination she was drowsy with GCS of 13 (E3, V5, M5). She was initially hypotensive but this resolved spontaneously.

She was admitted for overnight observation which passed uneventfully and was subsequently reviewed by the addiction team and by liaison psychiatry. There was no evidence of suicidal thoughts at this point and it was noted that she is well known to the community addictions team. She was discharged without any medical follow-up.

Kind Regards,

Dr Allan D Cameron

Dear Dr Muir

Re: Sharon McDonald DOB: 05-01-1976

Diagnosis: F11.22, F12.1

Management: 55mls Methadone

Urine: Positive for Methadone and Benzodiazepines only

Pharmacy: LG, St Vincent Terrace

This is to advise you that I saw your patient at our Callander Street Clinic today, 12 October 2011.

Sharon has been prescribed 55mls Methadone for a long time now. She tells me that she last used heroin 18 months - 2 years ago. She does not feel it to be a problem at all now. With regards to valium, Sharon remains on a 20mg's benzodiazepine prescription from yourself and apparently. She is also being prescribed 10mg's tablets for night. There was no cocaine, ecstasy, speed or acid use. With regards to cannabis use, Sharon tells me that she is smoking 5 - 6 joints of hashish every night. Detailed harm reduction advice was given and brief intervention was carried out informing her of the dangers of smoking as many joints.

She remains tee-total in terms of alcohol use.

With regards to physical health, Sharon suffers from type 2 diabetes and she continues to be on her regular prescription which is a sulfonylurea and metformin. She appears to be very compliant with the current treatment however, capillary blood glucose remains unclear to me. She tells me that she lost some weight, but then put it back on again. Even a year ago, she was talking about abnormal cervical cell results, but apparently there was no follow up into this. I strongly advised her to address this either with yourself or through the Sandyford Clinic where she was to attend anyway, according to her story.

In terms of mental health, Sharon tells me that she is still bothered by her brother's death and also a friend was murdered back in 2010. She feels that she has not addressed these issues, but she has managed to stay in the same flat away from her abusive partner. She continues to take her paroxetine 30mg's which is prescribed by yourself. She finds it quite effective. She also finds her friends easy to talk to and quite helpful. Sharon tells me that her current symptoms stem from continued bereavement issues and also the stress involved in not having contact, for 2 years, with her 11yr old child. She is hoping to build up this relationship as she maintains a good relationship with her 17yr old daughter.

North West Community Addiction Team 11 Callander St, Glasgow, G20 7JZ Tel: 0141-531-9254

NHS Confidential: Personal data about a patient

Sharon has no self-harm or suicidal thoughts at present. She continues to live with a friend at the moment and is on Income Support and incapacity Benefit. She has 6 outstanding charges which include theft and carrying an offensive weapon. She is hoping to avoid a custodial sentence.

Our plan includes a detailed mental health assessment, continued methadone prescription at 55mg and further encouraging engagement with NHS services regarding her physical health. A urine screen will be carried out repeatedly.

Should you require any further information, please do not hesitate to contact us.

Best regards

Dr Sandor Hajnal
Medical Officer
North West CAT

Dear Dr Muir

Re: Sharon McDonald
CHI: 0501766405
Address: Flat D9, 30 St. Vincent Terrace, GLASGOW, G3 8UT

This patient continues to attend the North West Community Addiction Services at: Callander St

Diagnosis: Opiate Dependent on Substitution Therapy F11.22
Current prescription: Methadone - increased to 55mls today
Supervision arrangements: Daily supervised with Saturday 110mls for Sundays
Pharmacy: LG Pharmacy
Addictions Care Manager: Tracey Myatt
Last drug screen: Completed today, positive for methadone, opiates and benzodiazepines
BBV status: Testing was declined
Impact parental substance use: Has an 15 year old, who is in Foster Care with no contact. Has a 21 year old who's lives in his own flat.

I reviewed this lady today. She was quite upset as her partner of 16 years was murdered a few weeks ago. She'd had to identify the body. His son has been accused of the crime and I believe it went to court last week. Since then she has been dabbling with heroin again and says she's using a couple of bags every few days. She has been smoking heroin and also injected a few times in her hand. She said she used clean needles and has never reused a needle. I examined her hands today and there didn't seem to be any obvious infection or damage. Due to her recent injecting she has asked for an increase and I agreed to put her up to 55mls today. She is also using Diazepam about 70 milligrams most days and has been buying this. We discussed the risks of taking this along with her other medication as this increases her risk of overdoses.

North West Community Addiction Team, 11 Callander St, Glasgow, G20 7JZ, Tel 0141 531 9254 Fax 0141 531 9258

Criminal Justice

She is due a court date in October for possession of valium.

She denies any alcohol in the last few weeks. She has undergone Naloxone training and has a supply of Naloxone at home. She has a past history of self harm and cutting herself. She was cutting herself several weeks ago but has not done so in the last few weeks.

She described mood swings but does not feel suicidal at present and has no plans made for this. She's managing on her benefits at the moment. Her prescription was given today for 55mls for the next 2 weeks.

Yours sincerely

Aislinn Garmany
Medical Officer

Clinical Comments:	
	Dear Doctor, Thank you for your continuing care of this patient. Ms McDonald was admitted to QEUH Ward 11A following an overdose. She has a past medical history of multiple previous overdoses. She was brought in by ambulance having been found drowsy and unresponsive by her friend. She was given 2 injections of Naloxone IM. Ms McDonald became more responsive and had taken street valium, gabapentin and heroin. She had a prolonged QTC and so her Trazadone was withheld on admission and has now been restarted in a divided dose. She was treated for a chest infection with Amoxicillin and Metronidazole. She was reviewed by Addictions Liaison and Fajeh Liaison, who have discharged her. She was given Praxosad and training on how to use it prior to discharge. She will be followed up by the CAT team. Kind regards, Douglas Young FY1 Ward 11A QEUH

Dear Dr Muir

Re: Sharon McDonald
CHI: 0501766405
Address: Flat D9, 30 St. Vincent Terrace, GLASGOW, G3 8UT

This patient continues to attend the North West Community Addiction Services at Callander Street.

Diagnosis: Opiate Dependent on Substitution Therapy F11.22
Current prescription: Methadone 55mg daily
Supervision arrangements: Daily supervised with Sundays dose on Saturday
Pharmacy: LG Pharmacy
Addictions Care Manager: Tracey Myatt
Last drug screen: In October positive for methadone and benzodiazepines
BBV status: Was tested in 2013 and negative declined today
Impact parental substance use: Aged 22 years and 15 years who do not stay with her.

I reviewed this lady today. She's got a space in the 218 Project to start tomorrow. She is hoping to stay there for 3-6 months and detox and come off her methadone. She has attended the Day Programme in the past and has managed to reduce a little bit but due to life circumstances ended up having to increase her methadone again. She tells me she has been buying some street diazepam. She also tells me she is prescribed 5x 2mg a day from yourself. She denies any alcohol or other illegal drug taking. She said her last use of drug taking was a long time ago and she has been an injector in the past. She tells me she has already been tested for Hep C and HIV a few years ago and this was negative. She said she has been under a lot of stress over the last five years and many of her family members have died and she also had a traumatic event in the summer in July time when her partner was murdered. She tells me she has had her Mirtazapine put up to 45mg daily and feels this has been helping her moods. She has Type 2 Diabetes but it sounds like her control of this is poor and she certainly admits to eating a lot of sugary foods such as chocolate. She has a court date with a criminal justice issue in June or July I think for possession of illegal diazepam. I've continued her prescription of 55mg today and 218 Project will take over her prescription from here.

Yours sincerely

Re: Sharon McDonald

D.O.B: 05/01/1976

To Dr Muir,

I am writing to advise you that your patient Sharon McDonald is due to demit from Turning Point Scotland 218 Residential Service on the 09/05/2016.

Please find attached a copy of the kardex with current medications listed. If you require any further information please don't hesitate to contact the 218 Project.

Yours sincerely

218 Staff Nurse

21 MAY 2019

Dear Dr Crawford

Name:	Sharon McDonald	CHI: 0501766405
Address:	Elder Street Project, 55 Elder Street, G51 3PX	

Diagnosis:	Opiate dependence on opiate replacement therapy F11.22
Prescription Issued:	Methadone 1mg per 1ml daily 85mls daily
Dispensing / supervision:	Daily supervised with Sunday dose on a Saturday
Pharmacy:	LG, St Vincent Street
Addictions Care Manager:	Tracy Myatt
Last drug screen:	23/04/2019 – Positive for opiates, methadone, cocaine and benzos
BBV status:	Aug 2018 – Negative. Declined further testing today.
Children and Families:	N/A
ECG / QT risk:	N/A
Naloxone:	Has a supply.
Driving Advice:	DVLA advice given. Not driving.

Recovery Plan:

Drug Use:

Presented this morning as had missed the chemist for the last few days. Reports missing 3 days at the holiday weekend. Reported drug use- illicit methadone one day 70 mls, another day 60 mls. Also injected heroin a few times. Injected into arms- inspected, thrombosed area over left forearm tender but not red or hot, does not look infected. Reports using clean needles and no sharing. Taking illicit benzos- unsure of amounts buys 1000 at a time, taking at least 30/day. Very mildly intoxicated.

NHS Confidential: Personal data about a patient

Alcohol Use:

Conflicting reports- Says she is drinking a bottle of Buckfast every 2-3 days, then says she is not drinking.

Physical Health:

Has Diabetes and stopped taking her insulin for a week. Monitoring her BMs every few days last tested at the weekend- level 15. Discussed testing ketones, says she lost her ketone monitor and advised to contact GP for another. Discussed the risks to her health of high sugar levels. BBV test declined - strongly encouraged to take the test. On insulin, metformin, Jardiance, Atorvastatin.

Mental Health:

Moods up and down. Describes poor memory- long term benzo use for years. On trazodone and Propranolol- takes these intermittently. Low at times and fleeting suicidal thoughts, no plans not actively suicidal. Discussed mental health assessment if manages to reduce illicit drug use.

Contact with Children:

NA.

Legal:

Police charge for drug possession.

Social:

Accommodation at risk as illicit drugs found there. No partner. Money - getting her benefits. DVLA advice- not driving. Safe storage discussed.

Risk, Harm Reduction and Recovery Interventions:

Decision to continue with current script dose- 85 mls daily and reassess next week for increase in dose. To keep a drug diary, intends to attend GDCC . Advised on community support. Advice on self-directed detox from benzos.

GP Action:

You may wish to consider adding the above prescription to EMIS as medication prescribed by specialist services.

Please consider the risks of co-prescribing other opiates, benzodiazepines, gabapentinoids and other medication for this patient

Yours sincerely

Dr Aislinn Garmany

Dr. Gaw
Woodside Health Centre
Barr Street
Glasgow

Dear Dr. Gaw,

Re: Sharon McDonald
CHI: 0501766405
Address: Flat D9, 30 St. Vincent Terrace, Glasgow, G3 8JT

This patient continues to attend the North West Community Addiction Services at: Possilpark Health Centre.

Diagnosis: Opiate dependence substitution therapy
Current prescription: Methadone 1mg/1ml, 75ml daily
Supervision arrangements: Daily supervised with Sunday dose on Saturday.
Pharmacy: L&G
Addictions Care Manager: Tracey Myatt
Last drug screen: 19 April 2017 – positive for methadone, positive opiates, positive for benzodiazepines.
BBV status: Accepted today, taken on the 3 May 2017
Impact parental substance use: Has two grown-up children aged 17 and 23.

I reviewed this lady today. She did look a bit sleepy-eyed, but said she hadn't slept last night. She does report to having taken a friend's dihydrocodeine for back-pain. She has been encouraged not to do so. She also tells me she is buying diazepam, sometimes street ones, sometimes prescription. She thinks these are 2mg tablets, but she says she is buying 200 every few days. We discussed the risks associated with this. She is at high-risk of overdose, with using illicit diazepam and her methadone prescription. Also, she reports to smoking heroin a few times a week over the last few weeks. No injecting noted, but an episode of injecting and sharing a needle was mentioned in January time and she agreed to HCV and HIV testing today. I questioned her on having taken some diazepam before attending the clinic as she did look quite heavy-eyed today, but she denied this and said it was because she was feeling very tired and had not slept last night.

NHS Confidential: Personal data about a patient

With her medical history, she is diabetic and is on insulin, although on further questioning, she says her diabetes is doing fine but when I asked for specific levels for her monitoring of her blood-sugar, she says she has not been monitoring this. She also says she takes mirtazapine 45mg daily for her moods. She tells me she has been unwell recently and has attended A&E with a urine infection. She reports having quite frequent urine infections. I have tried to explain the importance of checking her blood-sugars as she is on insulin therapy and will need to adjust the dose according to these readings and this might be having an effect on other parts of her health.

We discussed her mental health, which she said was poor at present, but did not seem suicidal. I will discuss with our nurse a mental health assessment for her, but this may not be possible due to the level of illicit diazepam use with Sharon.

With her social history, she has her own place. She lives alone. She does not have a partner and is not sexually active at present. She has attended the 218 and is hoping to attend the day-programme there.

With regards to her criminal justice involvement, she said there were no issues pending. We discussed safe storage of her methadone; she is aware of this as well as DVLA advice and she does not drive.

I did offer to increase her methadone today as she is still struggling with her heroin use, but she declined this. I have continued her prescription at 75ml today. She has been given overdose advice and was offered naloxone training, but declined this.

She will be seen again in two weeks time.

GP Action required: If you are considering prescribing other opiates, benzodiazepines or gabapentin/pregabalin for this patient or have any concerns then please get in touch at the number below.

Yours sincerely

Aislinn Garmany
Medical Officer
North West Community Addiction Team

I regret to inform you that we have been unable to persuade your patient to attend the colposcopy clinic. No further appointments will be arranged for her to attend the clinic. I would appreciate it if you could encourage her to attend.

I have written to her asking her to contact you or alternatively to contact the clinic directly and we will do our best to try and accommodate her.

If she has changed address or moved from your practice I would be grateful if you could let us know.

This patient has now missed 4 appointments without notification.

Yours sincerely

Butterbiggins Medical Practice
134 Butterbiggins Road
Glasgow
G42 7AF

Dear Dr

Name:	Sharon McDonald	CHI: 0501760405
Address:	Govanhill Womens Project, 14 Polmadie Street, Glasgow, G42 0PQ	

Diagnosis:	F11.22 Opiate dependent prescribed opiate replacement treatment.
Prescription Issued:	105ml methadone (1mg/ml) daily
Dispensing / supervision:	Dispense daily, Saturday for Sunday, supervised on day of collection
Pharmacy:	Robertson Cathcart
Addictions Care Manager:	Tracy Myatt
Last drug screen:	Taken August 2019 positive for methadone, opiates, cocaine and benzodiazepines
BBV status:	Updated 11/12/19- negative
Children and Families:	No children in her care
ECG / QT risk:	To be arranged
Naloxone:	Declined has supply in her accommodation
Driving Advice:	DVLA advice not driving

This Patient continues to attend the North West Alcohol and Drug Recovery Service at Woodside Health & Care Centre and I reviewed them on. 11/12/19

Drug Use: Sharon presented late to clinic seen with her worker. Reports IV cocaine use , multiple injection sites on both forearms - not infected. Using fresh needles but occasionally sharing other works. Also states injecting in her groin but declined inspection. Seems moderately intoxicated and volatile in mood, unkempt. States 'no-one is helping me' , stated were are trying to help her but she must also help herself . No heroin use reported. Buying illicit valium has managed to reduce this slightly did not quantify amount. Discussed an increase dose, initially reluctant then agreed .

Alcohol Use: No alcohol today , says she was drinking at the weekend.

Physical Health: Has diabetes not been checking her levels, taken insulin yesterday. Not been eating and lost weight- explained that this may be caused by her drug use. Says someone she uses with has HIV, BBv test updated.

Mental Health: tearful and aggitated at times and shouting . Then managed to calm down. No thoughts of self harm or suicide. Evidence of future planning.

Contact with Children: None in her care.

Legal: Not discussed.

Social: On benefits to fund drug use, no shoplifting or prostitution. In Govanhill, does not like it there- says only using cocaine as it is ' all around me' . Discussed keeping safe and away from drug use. Care manager to phone housing to check if any more suitable accommodation is available. Asking to go back to 218.

Risk, Harm Reduction and Recovery Interventions: Naloxone- in accommodation declined a supply. Script given Methadone 105 mls daily for 7 days. Care manager to contact Sharon next week to check if a further increase is needed.

GP Action:

You may wish to consider adding the above prescription to EMIS as medication prescribed by specialist services.

Please consider the risks of co-prescribing other opiates, benzodiazepines, gabapentinoids and other medication for this patient.

Yours sincerely

NHS Confidential: Personal data about a patient

This Patient continues to attend the North West Alcohol and Drug Recovery Service at Possilpark Health Centre and I reviewed her on 23/08/18.

Drug Use: Presentation better today, slightly heavy eyed but not intoxicated. Still reports using diazepam buying someone's script and taking about 25 x 5 mg daily. If not she buys illicit diazepam and takes 20/30 a day. Long term use. Last urine positive for benzos, methadone and opiates. Last injected heroin a few weeks ago, no sharing of equipment gets clean needles. No history of seizures. Asking about a benzo detox, I will discuss with her worker regarding motivation and arrangement.

Alcohol Use: None reported.

Physical Health: Has diabetes and recurrent urine infections. Not good at monitoring her sugar levels. Had her bag stolen last week so lost her monitor, must see practice nurse for replacement. Agreed to BBV test today. On insulin twice daily, metformin, atorvastatin. Not sexually active at present.

Mental Health: Moods up and down, not suicidal. On trazodone 300 mg daily.

Contact with Children: None in her care.

Legal: No issues.

Social: In supported accommodation. Like it there. Safe storage discussed. DVLA advice.

Risk, Harm Reduction and Recovery Interventions: Naloxone declined. Script given: methadone 85 mls daily for 28 days, 170 mls on Saturday. Fp same, next appointment 19/9/18.

GP Action:

You may wish to consider adding the above prescription to EMIS as medication prescribed by specialist services.

Please consider the risks of co-prescribing other opiates, benzodiazepines, gabapentinoids and other medication for this patient.

Yours sincerely

Sharon Elizabeth McDonald; D.O.B: 05/01/1976; CHI: 0501766405
14 POLMADIE STREET, Glasgow, Lanarkshire, G42 0PQ

Admission: Speciality - Gastroenterology; Ward - QEUH Ward 8B General Medicine
 Consultant - Dr Heather Lafferty; Date of Admission - 12/07/2020
 Date of Discharge - 17/07/2020; Discharged to - Private Residence - no additional detail added

Clinical Comments: Diagnosis:

New Hepatitis C infection, Insulin requiring Diabetes, adverse social circumstances, ongoing intermittent illicit drug use.

Further to this ladies IDL, her Hepatitis C PCR came back positive and I arranged for Sharon to be seen by one of our Hepatitis & Liver Nurse Specialist. This happened on the 4th August 2020. Her LFT's do seem to be settling and it maybe that she clears the virus however she will be under follow-up for the time being. Her Hepatitis C RNA remain sdetected on the 4th August 2020.

Her glucose levels were high whilst she was in hospital and she was reviewed by our Diabetes team who checked c-peptide levels. These were low despite hyperglycaemia at the time and the advice from the Diabetes team is that this means that she does require insulin and should **not be re-started on her Empagliflozin**. The Pharmacist from your practice have been in touch to query this but at the time, I didn't have access to her medical notes which have been taking for scanning nor did I have the c-peptide results.

The third issue was that she had evidence of consolidation on her chest x-ray and she was treated with a course of Co-amoxiclav and a repeat chest x-ray has been requested and I will be back in touch in due course with the result of this.

Kind regards

Name SHARON MCDONALD
Date of birth 05-Jan-1976
Address FLAT D9, 30 ST VINCENT TER, GLASGOW G3 8UT

This patient has not attended their screening examination following three recent invitations. Could you please check that we have the correct patient details. If any are incorrect, please let us know so that we can update our records and offer a further appointment.

Unless we hear from the patient in the meantime, they will be re-invited next year. However, should you have contact with the patient and wish them to be seen please get in touch and we will send them another appointment.

Should you have any queries, please contact us on 0141 277 7417 or 0141 277 7418.

Yours sincerely

Dear Ms McDonald

As you will know, you have been referred to the Alcohol & Drug Recovery Psychological Therapy Service. I am pleased to offer you an appointment with Dr Mooney as follows:

VENUE: South ADRS, New Gorbals Health Centre, 2 Sandiefield Road, Glasgow, G5 9AB

DATE: Monday, 15 July 2024

TIME: 2.15pm

This appointment will normally last for no longer than an hour.

During this appointment, you will have the opportunity to discuss your concerns and consider whether a psychological therapy may be helpful to you.

The outcome of this appointment may include being offered: advice, individual psychological therapy, a group programme or another service if this would be of more help to you.

If you are unable to attend, please contact me on the telephone number above. Our service needs to manage the waiting list as fairly as possible, therefore if you contact to rearrange the appointment we will do our best to accommodate this.

Please be aware that if you do not attend the appointment without notifying us of this in advance, this is likely to result in your discharge from the Psychological Therapies Team.

Yours sincerely

Dr Patricia Mooney
Consultant Clinical Psychologist and
Professional Lead for Psychology

Dear Colleague,

SHARON McDONALD – DOB: 05.01.1976
House 12a, 20 Harriet Place, Pollokshaws, Glasgow G43 1HR

I am writing to update you regarding my input with Sharon.

I have met with her on two occasions (one of which she was significantly late for) and she has failed to attend a further 4 appointments. As a result, I haven't seen her since July and she hasn't attended since I sent her an 'opt in letter'. This, alongside her somewhat sedated presentation on the two occasions that she did attend, means that I was unable to complete my assessment with her. However, from the meetings that we did have, Sharon did not appear to have any clear aims or goals that she wished to get out of psychological therapy. All of this leads me to the opinion that now is not the right time for Sharon to be able to engage in, or receive benefit from, psychological therapy and I have discharged her from my caseload.

Sharon may be re-referred should she be in a position to engage in work of a psychological nature in the future. However, I would suggest that she consider whether she wishes to prioritise reducing her dose of methadone before this, as we do not recommend someone engage in a psychological intervention (particularly a trauma related one) and reduce protective medications at the same time.

Please do not hesitate to contact me should you wish to discuss this further.

Yours sincerely

Dr Patricia Mooney

How does depression affect you?

Sharon McDonald
 Flat 9D
 30 St Vincent Terrace
 GLASGOW
 G3 8UT

Filling in this "Patient Health Questionnaire" (PHQ) will help us understand how your depression affects you now.

Thinking about the last two weeks, how often have you been bothered by the following problems?

	Not at all	Several days	More than half the days	Nearly every day	Score
	0	1	2	3	
1 Little interest or pleasure in doing things.		✓			
2 Feeling down, depressed, or hopeless.		✓			
3 Trouble falling or staying asleep, or sleeping too much.			✓		
4 Feeling tired or having little energy.		✓			
5 Poor appetite or overeating.				✓	
6 Feeling bad about yourself—or that you are a failure or have let yourself or your family down.				✓	
7 Trouble concentrating on things, such as reading the newspaper or watching television.			✓		
8 Moving or speaking so slowly that other people could have noticed. Or the opposite—being so fidgety or restless that you have been moving around a lot more than usual.				✓	
9 Thoughts that you would be better off dead, or of hurting yourself in some way.		✓			
					Total 18

2. If you checked off any problems, how difficult have these problems made it for you to do your work, take care of things at home, or get along with other people?

Not difficult at all Somewhat difficult Very difficult Extremely difficult

Total number of symptoms

Total score

Dear Sharon,

I am sorry that you did not attend your psychological therapy appointment on Monday 2/12/24. As I have written to you before asking that you contact me if you would like another appointment, and you have not managed to make any of these, then I have to assume that now is not the right time for you to do any psychological work and so I have discharged you from the Psychological Therapies Service.

I understand that attending psychological therapy is a big step and can feel challenging for some people. It is important for you to feel like it is the right time to be able to take that step.

If you would like psychological support again in the future, you are welcome to speak to your worker about a possible re-referral.

Yours sincerely,

Dr Patricia Mooney

Dear Sharon,

I am sorry that you were unable to attend your appointment with me today. I hope that you're well.

I understand that engaging with psychological therapies can be difficult, but regular participation is essential for people to gain benefit from this work. Therefore, could you contact the office to let me know if you still wish an appointment?

If I don't hear from you within two weeks from the date of this letter, then I will assume that you no longer require to be seen and will discharge you from the psychological therapies waiting list. Let me reassure you that should this happen, it will not impact the rest of the treatment that you receive from the team and you may also be re-referred in the future should you feel ready to engage with this kind of work.

Yours sincerely

Dear Doctor

Name/Address: SHARON MCDONALD, FLAT D9, 30 ST VINCENT TER, GLASGOW, G3 8UT

Patient ID/CHI: 0501766405

DOB: 05-Jan-1976

Date of Gartnavel General Hospital Appointment: 16-Feb-2018

Please find a clinic summary sheet attached.

Summary:

The above patient diabetic control is improving as her Hba1c today is 72.

Her does of humulin m3 is 28 units morning and 30 units evening along with her metformin 2g daily.

Her weight is up by 3kgs to 90.4kgs BMI 31

I have recommended to add in Jardiance 10mgs daily

To try and increase activity support worker was with her and will try and implement this for Sharon.

The patient is back in 3months to see myself.

Next review:

Yours sincerely

 Christine Matheson
 Diabetes Specialist Nurse

Dear Dr McKnight

SHARON McDONALD DOB 5 1 76
174 HOUSEHILLWOOD ROAD, GLASGOW

Further to our letter of 4 September 1989 we are writing to inform you that Sharon and her mother have disengaged from contact with our department and we are subsequently discharging the family from our case load.

I have recently been in touch with her school where I spoke to staff of the pupil support unit. They viewed Sharon as being immature for her year and someone who stood out from other pupils by virtue of this. They hope to involve her in the near future in a social skills group run jointly by themselves and the educational psychologist. They feel this would benefit her.

Should there be further difficulties we would, of course, be willing to reassess the situation at a future date.

Yours sincerely

Barbara Cullen

DoB: 05-Jan-1976

Clinical Comments:	<p>Sharon was admitted to QEUH on 12/7/20 generally feeling unwell. She was pyrexial and complained of feeling dehydrated.</p> <p>She was found to have deranged LFTs and raised CRP. CXR found: compared to previous chest radiographs, there is a small new linear density in the left mid zone. This could be artifactual or could be due to focal infection. I would advise a repeat chest radiograph following treatment to ensure that this resolves and is not due to malignancy. This responded to co-amoxiclav and she should complete a weeks course. CXR will need to be repeated in 4-6 weeks.</p> <p>Liver screen didn't show any abnormality and USS found There is an area of focal fatty sparing seen within the left lobe of liver. This appears unchanged since the previous ultrasound in 2017.</p> <p>She had very poorly controlled diabetes, HbA1c this admission was 88. She was reviewed by the diabetic team and her insulin regime was changed to 30 units mane and 26 units at tea time. She is awaiting new meter to measure glucose.</p> <p>Her bloods and symptoms improved on antibiotics and she was fit for discharge. We had struggled to get in contact with the addictions team as an inpatient.</p> <p>Follow up as below, changes to insulin as mentioned, to complete abx but no other changes to made.</p> <p>Many thanks for continuing care</p> <p>Ward 8b</p>
Follow Up:	Yes follow up with community diabetic team, follow up CXR 4-6 weeks booked
Results Awaited:	No
Pharmacist Comments:	
Final Discharge Letter to Follow:	Yes

Name/Address: SHARON MCDONALD, FLAT D9, 30 ST VINCENT TER, GLASGOW, G3 8UT

Patient ID/CHI: 0501766405

DOB: 05-Jan-1976

Date of Gartnavel General Hospital Appointment: 07-Mar-2016

Please find a clinic summary sheet attached.

Summary:

The above patient was referred to me from the clinic to convert onto insulin therapy due to high Hba1c 93 and being symptomatic.

The patient came with her support worker.

Education and leaflets have been given to the patient prior to coming today, so try and get a clearer picture and understanding of her diabetes.

She has been monitoring her readings x4 daily before main meals target readings 5-7mmols and at bedtime target 8mmols.

Will stop her gliclazide completely from today continue metformin 1g twice aday.

Will add in humulin m3 twice aday.

She has her ID card.

I have went over how the insulin works and when it should be given, I have went over injection sites, storage of her insulin, how to dispose of the needles.

She knows to have regular main meals and a supper at bedtime, was seen by the dietician today.

I have said to the patient we will discuss hypo's and sick day rules.

We will discuss alcohol and exercise.

Dear Dr Muir

Sharon McDonald (05.01.76)
House 2, 21 Riverbank Street, Glasgow, G43 1QD

I regret that your patient failed to keep her appointment at the Southern General Hospital on 2 August 1999. As she has not been in touch with me about it either, no further appointments have been arranged for her. If you feel it is appropriate to refer her again, please do not hesitate to get in touch with us.

Yours sincerely

This patient has been on a methadone programme for some time now. She has started using high doses of benzodiazepines, claiming to be taking 200mg or more of diazepam daily. She is experiencing panic attacks and depressive symptoms and has tried to reduce her intake successfully. She continues on methadone 70ml. For sometime she was prescribed moclobemide and clonazepam but this seems pointless in the face of her illicit use.

She has been on methadone with me since 1996 and had several prescriptions prior to this. She seems unable to detox without relapsing. She has not taken up the offer of testing for infections and was a poor attender at counselling. She has a five year old daughter, cared for by her mum, and had a TOP last September; I believe she feels very guilty about this.

I feel she may require inpatient detoxification from such a high dose of benzodiazepines and would be grateful if you could see her.

Yours sincerely

Alastair Muir
M.B.Ch.B.

Dear Doctor

Name/Address: SHARON MCDONALD, FLAT D9, 30 ST VINCENT TER, GLASGOW, G3 8UT

Patient ID/CHI: 0501766405

DOB: 05-Jan-1976

Date of Gartnavel General Hospital Appointment: 28-Nov-2017

Please find a clinic summary sheet attached.

Summary:

I saw Sharon again today in the company of her support worker. She is still at Turning Point in Bath Street. Recently she was admitted with a severe pyelonephritis and her blood glucose levels were very high. Her insulin doses were adjusted upwards and she is currently on 30 units bd. Looking at her meter, her blood sugars are still running in the high teens and early 20s most of the time with no obvious pattern. This is supported by an HbA1c today of 11.3. She continues to take Metformin 1g bd.

She just needs more insulin and I have increased the doses to 36 units bd today, but have warned her that she will probably need a lot more than this to break the back of the current vicious cycle. I have asked Christine Matheson, DSN, who spent some time with her last year, to see her again in a few weeks' time to continue the momentum of dose titration.

Next review: 2.8.18

Yours faithfully

Dear Dr. SH Goldberg,

Sharon Elizabeth McDonald; D.O.B: 05 Jan 1976; CHI: 0501766405
14 POLMADIE STREET, Glasgow, Lanarkshire, G42 0PQ

Attendance: Specialty - Gastroenterology; Clinic - VICTGA3-NURSE C MCTAGGART LIVER TUE
AM

Date and Time of Appointment - 04/08/2020 12:30

Clinical Comments:**Diagnosis:**

1. Recent Hepatitis C infection ?acute.
2. Diabetes.
3. Ongoing alcohol and drug use.

Sharon attended the Nurse Led Liver Clinic last week accompanied by a Worker from Govanhill Women's Project.

You will be aware that during her recent admission at the QEUH, she was found to be Hepatitis C antigen positive. She had been Hepatitis C antibody negative in December 2019 so this was obviously a recent infection.

I explained to her that it maybe that she has an acute infection and that she is going to clear the Hep C virus without any treatment.

NHS Confidential: Personal data about a patient

McDonald Sharon Elizabeth

CHI: 0501766405

OPCL 04/08/2020 v1

Her LFTs have improved, ALT 53, Alk Phos 23, Albumin 34. Her Hepatitis C viral load is also dropping currently 568/ml.

I tried to get a hold of her on the phone today but she didn't answer. I have therefore written to her and given her an appointment to come back and see me in October for updated bloods.

She said that she last injected at the start of July. She still occasionally takes street Valium or Diazepam. She drinks a bottle of Buckfast twice a week.

Please do not hesitate to contact me if you have any queries.

Yours sincerely

Christine McTaggart

Gastroenterology Nurse Specialist

Dear Ashley,

Sharon Elizabeth McDonald; D.O.B: 05/01/1976; CHI: 0501766405
HOUSE 12, 20 HARRIET PLACE, Glasgow, Lanarkshire, G43 1HR

I would appreciate it if you could arrange for a Hep C PCR to be taken on this patient.

She last attended me in August and her Hep C viral load was 568 IU/ml and I wondered whether she was clearing spontaneously. Unfortunately she has then failed to attend two further appointments with me.

A dried blood spot test would be suitable if there is difficulty getting a venous sample.

Thank you for your help.

Yours sincerely,

Christine McTaggart

2024-05-27	Propranolol 50mg tablets	oral	ONE TABLET DAILY		Patient does not require

Reason for Admission and Presenting Complaints	Admission Category
No data available	No data available

Clinical Comments:

Dear Colleague,

Your patient Ms Sharon McDonald attended the Queen Elizabeth University on the 21/05/2024 due to a 2 day history of lower abdominal pain and left sided back pain. The patient was vomiting and passing reduced urine with a burning sensation and a foul smell. She had also been feeling slightly feverish.

The patient was found to have an admission elevated urea and creatinine and an eGFR of 37. Her blood sugars were also found to be elevated. Otherwise the patient's blood results were found to be normal including ketones and infection markers.

NHS Confidential: Personal data about a patient

McDonald Sharon

CHI: 0501766405

DoB: 05-Jan-1976

	<p>Sharon is prone to recurrent UTIs and therefore a renal ultrasound was performed which showed gross cortical scarring of the left kidney. The patient had blood cultures performed which came back negative. A midstream urine sample was also done however the results came back inconclusive. Therefore a diagnosis of an AKI, left sided pyelonephritis and hyperglycaemia secondary to poor diabetes control was made. She received 2 doses of gentamicin for her infection and completed a course of amoxicillin.</p> <p>The addiction liaison team reviewed Sharon and made the decision to co prescribe diazepam and methadone whilst she is an inpatient. They will follow her up in the community.</p> <p>Sharon is now feeling well with her AKI and infection resolved and therefore we believe she is appropriate for discharge.</p> <p>Thankyou for your ongoing care, Kind regards,</p> <p>Ward 5A QEUH</p>
Discharge Comments:	
Follow Up:	Yes Addictions follow up in the community
Results Awaited:	Yes BBV screen blood results
Pharmacist Comments:	
Final Discharge Letter to Follow:	Yes

Yours sincerely,

Raeesa IJAZ

Date:

Dear Dr. N Haque,

**Sharon Elizabeth McDonald; D.O.B: 05/01/1976; CHI: 0501766405
A12, 20 HARRIET PLACE, Glasgow, Lanarkshire, G43 1HR**

Admission: Specialty - Diabetes; Ward - QEUH Ward 5A General Medicine
Consultant - Dr Paul Connelly; Date of Admission - 22/05/2024
Date of Discharge - 27/05/2024; Discharged to - Private Residence - no additional detail added

Clinical Comments:

Sharon was admitted to the QEUH between 22nd and 27th May 2024. Sharon was admitted with an acute kidney injury secondary to pyelonephritis. Sharon responded well to fluids and antibiotics and was deemed medically fit for discharge.

Yours sincerely

Dr P Connelly

DR ALASTAIR J MUIR
WOODSIDE HEALTH CENTRE
BARR ST
GLASGOW G 207LR

Dear DR ALASTAIR J MUIR,

DIABETIC RETINOPATHY SCREENING PROGRAMME
PATIENT NON ATTENDANCE

CHI No: 0501766405
Name: SHARON MCDONALD
Address: FLAT D9, 30 ST VINCENT TER
GLASGOW, G38UT

This patient has not attended retinal screening following three recent invitations. Could you please check that we have the correct patient details. If any are incorrect, please let us know so that we can update our records and offer a further appointment.

Unless we hear from the patient in the meantime, they will be re-invited next year. However, should you have contact with the patient and wish them to be seen please get in touch and we will send them another appointment.

Should you have any queries please contact us on 0141 277 7417 or 0141 277 7418 or 0141 277 7449.

Yours sincerely,

Dr William Wykes

Dear Dr Haque,

Sharon Elizabeth McDonald; D.O.B: 05/01/1976; CHI: 0501766405
HOUSE 12, 20 HARRIET PLACE, Glasgow, Lanarkshire, G43 1HR

THERE ARE A NUMBER OF SERIOUS DRUG DRUG INTERACTIONS WITH THIS TREATMENT.

PLEASE ENSURE THAT THIS IS HIGHLIGHTED ON THE PATIENT'S ECS.

CONTACT DETAILS ARE LISTED BELOW FOR FURTHER ADVICE.

The above patient will commence treatment for Hepatitis C with Maviret on the 16 May 2022.

I have instructed her to stop Atorvastatin for the duration of Maviret treatment due to drug drug interaction.

The prescriptions will be prescribed by the hospital team and will be dispensed at the patient's chosen community pharmacy. The dose is as follows:

Glecaprevir 100mg/ Pibrentasvir 40mg tablets (Brand name- Maviret). Three tablets daily with food.

Please ensure that these drugs are added onto this patient's emergency care summary.

There are potential drug-drug interactions and your patient's current drugs have been screened and any changes to doses or timings have been advised. Please check prior to prescribing any new medication that there are no significant interactions. You can check on <http://www.hep-druginteractions.org>, contact Fiona Marra (HCV specialist pharmacist on 211 3367 or the liver nurse specialists 451 6080).

NHS Confidential: Personal data about a patient

McDonald Sharon Elizabeth

CHI: 0501766405

GCL 11/05/2022 v1

The length of treatment is 8 weeks.

Maviret is generally well tolerated. The most common side effects are lethargy, headaches and nausea.

The use of contraception has also been discussed and explained in detail. Maviret is not licensed to be used in pregnancy. Women of childbearing potential and their partners must use effective contraception during treatment. Female partners of male patients on treatment should use effective contraception during their partner's treatment. Female partners of male patients on treatment who are already pregnant should use barrier contraception. It is important that female patients do not take an oestrogen containing contraceptive.

Your patient will be seen at the nurse led hospital clinic as required.

Yours sincerely,

Christine McTaggart

Liver Nurse Specialist

Electronically Signed: Nurse Christine McTaggart, Nurse Practitioner

Dear Dr. N Haque,

Sharon Elizabeth McDonald; D.O.B: 05 Jan 1976; CHI: 0501766405
House 12a, 20 Harriet Place, Glasgow, Lanarkshire, G43 1HR

Attendance: Specialty - Gastroenterology; Clinic - SULGGA8-NURSE L GRAHAM LIVER CLINIC
THURS PM
Date and Time of Appointment - 08/09/2022 15:15

Clinical Comments:**DIAGNOSIS:**

1. Hepatitis C – completed Maviret August 2022
2. Fibroscan – normal liver stiffness 3.6 kPa, IQR 13%

Sharon attended clinic on the 08 September 2022 accompanied by Diane McCormick, BBV ADRS Addiction Nurse.

She is keeping well and has maintained abstinence from illicit drugs since discharge from the Stabilisation Unit. I have advised her to re-start her Statin and she has already started this.

Bloods - liver function tests/fbc within normal range, hcv pcr not detected at end of treatment. I have updated the patient.

She will require bloods in three month's time which I will arrange.

Yours sincerely,
