Consultant: Ms Sarah L Reid

Dear Dr Connolly,

Discharge Summary

Patient Name: Kevin Reynolds
Patient date of birth: 17/07/1979
Patient Address: 103 Old Monkland Road, Coatbridge, ML5 5EX
Date of admission: 23/02/2026
Date of discharge: 23/02/2026

Diagnosis Submeatal stricture
Poor flow rate

Procedure: GA cystoscopy
Urethral S-shaped dilators
Catheterised

This gentleman was admitted for the above procedure. He has been found to have a very poor flow rate and a submeatal stricture. We dilated this using guidewire passage with rigid ureteroscope and then S-shaped dilators. We proceeded to do a full cystoscopy and found that the rest of the urethra and bladder were satisfactory.

An 18ChG Silastic catheter was placed at the end of the procedure. He has been seen before with a raised PSA which then came down to 1.6 and had been found to have a normal MRI. He was therefore reassured. There is no urological cause for his weight loss that was found. He will require follow up with our nurses for a trial of voiding and to be taught how to do intermittent self-dilatation in 2-3 weeks.

Kind regards,

Yours sincerely

Sarah L Reid
Consultant Urologist

Authorised on 26/02/2026 10:45:36 by Sarah Reid.

Waverley Medical Practice**

		National Health Service Number	
CLINICAL NOTES	Surname (Block Letters) REYNOLDS		Forenames (Block Letters) KEVIN
	Address 85 Beauford Ave CRS		Date of Birth 17/7/79

Date		
17/6/97		Seen at addiction clinic. Urine screen obtained to substantiate present drug misuse. To return next week to discuss detox programme plans. PS th DCN
24/6/97		Failed to attend clinic. Mrs Reynolds (mother) attended to inform Kevin was involved with the Police during last week and had also been in hospital ITU re a Heroin overdose. He then refused to stay longer once recovered and failed to meet his mother this morning for appt. Awaiting further correspondence, if none; discharged. PS th DCN
* S/R 24/6/97		Attended later for appt. Drug use discussed, detox plans suggested. Agreeable to try detox at Monklands Psychiatric unit when bed becomes available, meantime advised to gradually then reduce present drug use and to attend next week, without being under the effects of illicit drugs. PS th DCN
17/7/97		Seen at addictions clinic. Attempted drug use reduction until last Sat; took £10 Heroin resulting in unconsciousness and hospital admission overnight only. Requested outpatient detox. Suggest

*This column has been provided for doctors to enter A, V or C at their discretion

Dr. Macachelle,
Coatbridge Fountain,
Coatbridge ML5

Dear Dr. Macachelle,

Kevin Reynolds D.O.B. 17.7.79 - 277060
1 Hawthorn Drive, Coatbridge. ML5

Thank you for sending this young man. He appears to have had some trouble with lower abdominal pain and also with bed wetting for sometime now. He has also been off his food on occasion.

On examination there is a fairly tight foreskin which I think would be better to be removed but I have also started some investigations of his urinary tract in order to exclude significant infection. I shall let you know how he gets on.

Yours sincerely

I.K. Drainer
Consultant Surgeon

Kevin Reynolds d.o.b. 17.7.79
1 Hawthorn Drive, COATBRIDGE.

I saw Kevin today in the clinic. His height at 134 cms is on the 3rd centile. Mother is 4' 9", father 5' 10". Predicated final height for Kevin on the 3rd centile would be 5' 4" which is quite acceptable. As you say, there are no signs of puberty as yet.

In the first instance I have arranged an x-ray for bone age and will see him again in January. Depending on the growth rate at that time, we may consider some screening tests for growth hormone levels.

Yours sincerely,

S Campbell

Dear Dr. Aitchison,

Kevin Reynolds d.o.b. 17.7.79
1 Hawthorn Drive, COATBRIDGE.

Kevin was reviewed at Dr. Campbell's Clinic recently. Since his last visit four months ago he has grown about 1.5 cms which makes his height velocity 4.5 cms per year which is on the 25th centile. He will be on the 10th centile taking his bone age into account. He is still not showing any signs of puberty.

I have simply said we will review his height again in six months time and also assess his pubertal changes.

Yours sincerely,

S. Campbell

Dr. K.J. Aitchison,
126 Bank Street,
COATBRIDGE.

Dear Dr. Aitchison,

Kevin Reynolds d.o.b. 17.7.79
1 Hawthorn Drive, COATBRIDGE.

I reviewed Kevin at Dr. Campbell's Clinic today. All the investigations taken during his short stay for investigation of his growth failure were within normal limits. In particular, his growth hormone showed a satisfactory response to exercise testing. His growth velocity remains very poor at 2.63 cms per year but this may represent a delayed late childhood growth. He remains pre-pubertal.
deceleration

He will continue to be monitored six monthly until the end of puberty.

Yours sincerely,

A. O'DONNELL,

Dear Dr. Aitchison,

KEVIN REYNOLDS DOB. 17.7.79
85 Beechwood Drive, Greenend, Coatbridge.

Kevin was seen for review today in the clinic. Height is now 145.2 centimetres which is progressing parallel to 'though slightly below the 3rd centile.

I would plan to see him again in July and will repeat the bone age at that visit. If he still has the chronological age/bone age gap and height is proceeding along the centile we would probably not need to follow him after that.

Yours sincerely,

S Campbell

1 Centre Park Court
Coatbridge

Dear Dr. Aitchison

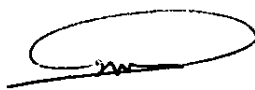

Kevin Reynolds - d.o.b. 17.7.79
85 Beechwood Drive, Greenend, Coatbridge

I reviewed Kevin at the out-patient clinic today for short stature. I am pleased to inform you that Kevin's height is now 154.5 cm and there was an increase of about 9.5 cm in the past year which means his height is progressing but is still slightly below the 3rd centile.

He is pubertal, in stage IV. His weight was just on the 3rd centile and other clinical findings were within normal limits.

I have repeated a bone age. According to his father and mother's height we expect that his final height would be between 156.5 cm and 173.5 cm. We will review him again in 3 months time and, according to the result of bone age, perhaps we will not need to follow him up after this.

Yours sincerely

25 September 1996

Dr Sharp
Coatbridge Health Centre
1 Centre Park Court
Coatbridge

Dear Dr Sharp

REF: KEVIN REYNOLDS : d.o.b. - 17-07-79
85 BEECHWOOD DRIVE, COATBRIDGE

The above named attended for initial assessment on 9 September 1996. He described his presenting problems as:-

1. Criminal behaviour to secure opiates.
2. Opiate dependence.

SOCIAL CIRCUMSTANCES : He lives with his parents and younger sister (15), he had a YTS with a construction firm although he was sacked for vandalism. He is in receipt of incapacity benefit (£50.00) per fortnight. He missed most of his secondary school due to suspensions of truancy. He is interested in computers, although he recognizes he has little prospect of securing full-time employment.

MENTAL HEALTH : He seen a psychologist at primary school because of problems with school-work. No other problems identified.

PHYSICAL HEALTH : LFT's indicate the following abnormalities. AST 148, ACT 230, APHOS 427, GGT 135.

MENTAL HEALTH / LEARNING DISABILITIES DIVISION
COMMUNITY ADDICTION TEAM
MONKLANDS HOSPITAL
MONKSCOURT AVENUE AIRDRIE ML60JF

TEL: 01236 746182

DATE RECEIVED	
07 OCT 1996	
FUNDHOLDING	☒
FILE	☒

ALCOHOL & DRUG HISTORY : He started drinking alcohol at age 11 daily drinking at twelve, started using ecstasy, LSD, Cannabis and Temazepam at age thirteen, Heroin from fifteen. Drugs/alcohol always taken with friends, at nightclubs or in the street.

CURRENT MEDICATION : Reducing regime of Lofexidine and diazepam.

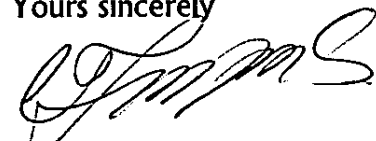

CONFIDENTIALITY : Due in court in November 1996 with various offenses related to theft.

Following this assessment Mr Reynolds has been offered a plan of care which will be achieved by:-

1. Provide pertinent literature and information on alcohol use and its effects, including health and social consequences.
2. Utilise motivational interviewing techniques to perform cost/benefit analysis exercise.
3. Provide opportunity to cease contact or seek help appropriate to stage in process of change, e.g. address of local needle exchanges, harm reduction information.
4. Encourage vigilance over risky situations.
5. Encourage the development of activities to replace harm drug taking.
6. 1:1 weekly supportive counselling at Monklands.
7. Liaise with medical staff regarding commencement of appropriate medication regime and monitor efficacy of same.
8. Obtain urine screen for drug analysis and inform GP and the client of results.
9. Inform the client of results of blood tests and ensure adequate understanding.
10. Monitor urine samples, providing regular feedback to the client.
11. Notification to the Home Office as per the Misuse of Drugs Act.
12. Facilitate attendance at the Coatbridge Recovery and Aftercare Project.
13. Provide written and verbal reports to GP on the clients presenting problems, alcohol /drug history, proposed interventions and outcomes of care.

We will keep you informed of his progress.

Yours sincerely

Valerie Timmons
Senior Charge Nurse.

Dear Sir/Madam

KEVIN REXFOLDS - DOB 17.07.79
85 BEECHWOOD DRIVE COATERIDGE - TEL NO 01236 605710

Thank you for seeing this 17 year old boy who has a problem with drug abuse, mainly with heroin and Temazepam though he denied any injecting. His mother attended with him today as she is anxious and feels he really needs help and insisted that I refer him to Castle Craig. He has attended the Addiction Unit at Monklands District General Hospital in September to December 1996. His main problems were obviously his opiate dependency and his criminal behaviour to secure his opiates. He lives at home with his parents and his sister and is unemployed.

He started drinking at the age of 11. He started using drugs eg, ecstasy, LSD, Cannabis, Temazepam at 13 and heroin from 15. Drug and alcohol are always taken with friends at nightclubs or in the street. When he was seen at the Addiction Unit he was treated with a reducing dose of Lofexidine and Diazepam.

Thank you for seeing him.

Yours sincerely

Dear Dr Chalmers

Re: Kevin Reynolds (d.o.b. 17.07.79) 85 Beechwood Dr, Coatbridge

Thank you very much for referring this young man who came for an assessment today. He was accompanied by his mother, father and an aunt. I fact he tells me that he is currently injecting some £40 worth of Heroin on a daily basis. He began injecting about a month ago (probably a little longer) and was largely forced into this on economic grounds. While it achieved the desired goal of reducing his daily requirement initially his tolerance has of course steadily increased to its current level. He does have injection track marks. Thus far he denies sharing needles/injecting equipment and tells me has managed to use clean equipment. He denies any recent use of Temazepam or other Benzodiazepines. As you note in your referral he has been using drugs in one form or another from the age of eleven. At that time it was mainly alcohol, he then progressed to solvents and glue, Ecstasy, Cannabis. In the last three years or so it has mainly been Heroin. He is clearly physically dependent on opiates, describes a typical abstinence withdrawal syndrome and at the time of assessment was clearly in the throes of early opiate withdrawal. His pupils were widely dilated, there was some lacrimation, rhinorrhoea and involuntary yawning. He described feeling some cramping pains in his legs.

In order to fund his dependence he has resorted to a whole range of criminal activities, mainly theft and has stolen lots of valuables from the family home. This has caused all kinds of problems. His parents seem bewildered and really do not know what to do. They have thrown him out of the house two or three times but this seems to cause even more guilt on their part.

Kevin tells me that his childhood was normal and happy. Nevertheless he experienced problems at school from an early age. There appears to have been considerable disruptive behaviour even before he began using drugs. The latter part of his schooling was characterised by conflict and /...

expulsion from school at the age of fourteen. He eventually left prematurely just after his fifteenth birthday. He has managed to obtain three jobs since leaving school - he worked briefly on construction sites but was dismissed for absenteeism and left the second job of his own accord. He then worked in a factory for two weeks before being dismissed from that. He finds that boredom is a major problem. I sense that Kevin may have been bullied at school though he denied this. Nevertheless his parents told me that he had been teased because of his apparent physical immaturity. They also told me that he had been investigated by a specialist because of slow physical development. They were also concerned about his lack of progress at school describing him as virtually illiterate. Kevin himself had told me that he has great difficulty in reading and writing. He seems to have problems with authority figures. There have been a number of court cases, he is currently the subject of social enquiry reports by a social worker. There are a number of outstanding court cases mainly for theft and I believe he is due to appear in court tomorrow.

Kevin told me that he sought help at the Addictions Unit at Monklands District General himself - this was not however reflected by his mother. He saw two counsellors there but does not believe himself that he was helped by this experience. I sense that this may have a lot to do with his own attitudes. He did, however, successfully comply with an out-patient detoxification programme but only remained drug free for three days following the completion of that. He described experiencing intense cravings for Heroin so he just went out and "scored".

In attempting to discern Kevin's own perceived needs I believe he would prefer to be stabilised on Methadone. This was apparent in the early part of our conversations.

I have serious reservations about admitting Kevin to the Castle Craig Treatment Programme at the present time. My real sense of this young man is that he is not really ready or motivated sufficiently to participate in an intensive and structured in-patient programme. I told him, for example, of the rules and responsibilities and given his history I have real doubts as to his ability to comply with these. He is clearly a very immature young man who in all probability does not really know what he wants at the present time. One thing is for sure and that is that he is terrified of the prospect of prison. I suggested to him that he needs to develop a sense of personal responsibility. He could make a start in terms of developing this by attending self-help groups - Narcotics Anonymous which could only have a positive influence on him. I believe it would be helpful also if his parents were to attend family support groups (and I explained all of this to them as well).

I do not know if you have a practice policy about prescribing Methadone but it would seem to me to be appropriate in this particular case especially as he has recently started to inject drugs. Perhaps short-term (two to three months) Methadone might at least help stabilise his current rather chaotic lifestyle, give him the opportunity to attend self-help groups and perhaps counselling and I have indicated my willingness to re-assess the situation in two months time. If he has followed through with regular attendance at self-help groups/counselling and gained any insight into ideas such as personal responsibility and complied with any prescribing you may undertake then at that time would more seriously consider an admission. I would of course be happy to see him again in two months regardless of any action on your part to prescribe for him. I have explained all of my concerns and the nature of this assessment to his parents in an attempt to point out that it is Kevin who requires treatment not themselves! I will send Kevin a further appointment in about a week's time. I should of course be grateful if you would let me know whether you do prescribe him any Methadone.

If you need any further information from me at the present time please do not hesitate to contact me.

Yours sincerely

Dr Robert A Hughes
Deputy Clinical Director

Dear Sir / Madam

I would be grateful if you could see the above drug addict who was seen by yourselves in September 1996. He continues to take heroin and smack.

I feel that I personally have little to offer him as he does not seem well motivated but he wishes help and I would be grateful if you could see him again for coming off his habit.

He has had a spell in Longriggend where he was drug free but unfortunately as soon as he came out he started taking drugs again.

He was seen at Castle Craig in January and it was felt that he was poorly motivated and I still personally feel this.

His mum was with him today and feels that he really needs help and I would be grateful if you could see him again.

Yours faithfully

Dr Fiona A Chalmers

Dr Chalmers
Coatbridge Health Centre
1 Centre Park Court
Coatbridge

Dear Dr. Chalmers

REF: KEVIN REYNOLDS : d.o.b. - 17-07-79
85 BEECHWOOD DRIVE, COATBRIDGE

The above named was referred to our services and attended on four occasions. During this time Mr Reynolds continued to abuse heroin and temazepam frequently whilst attempting a detox programme.

The offer of in-patient detox was discussed but Mr Reynolds expressed that it would be of no benefit as he would not get DF118 or methadone whilst in hospital.

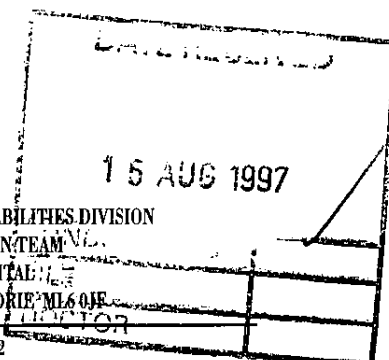

~~Due~~
De to continued use, negative attitude towards treatments offered, and non-attendance I am discharging Mr Reynolds from my clinic. If in the future he appears motivated and more committed to addressing his drug use please do not hesitate to re-refer.

Yours sincerely

Additional Information

This 17 year old known IV drug abuser was admitted with an overdose of Heroin. He had been found by his parents lying beside his bed with a needle nearby.

On admission following Narcan, he was tremulous and agitated. Pulse was 96 regular. BP 120/80. Heart sounds were pure. Chest was clear. Abdominal examination was normal. Oxygen saturation at rest on air was 96% and respiratory rate was normal.

His ECG on admission showed sinus rhythm. Urea and electrolytes, random blood glucose and coagulation screen were all normal. Full blood count revealed a haemoglobin of 14.5, white cell count 18.9 and platelets of 228.

Following the introduction of intravenous Narcan there was considerable improvement in his conscious level. This would be in keeping with an opiate overdose. He became agitated and tremulous and took an irregular discharge before being seen by the Addiction Team.

We have not arranged any formal review.

Payment of benefit and the award of National Insurance credits due to incapacity for work are subject to an incapacity test. If a customer satisfies the test or is incapable of work, they no longer need to send us medical certificates.

22/01/2000

MR KEVIN WILLIAM REYNOLDS

REF: JK976576A

The patient shown above has satisfied the incapacity test or is treated as incapable of work so we do not require further NHS medical certificates for this person's present claim for benefit. However, we may need to contact you for further information about your patient in the future.

Proof of incapacity or illness may still be required for other interested groups or organisations such as employers and insurance companies. The provision of this information is not usually an NHS requirement.

If your patient makes another claim for benefit in the future, we will require medical certificates from the date of incapacity.

The booklet 'A guide for registered medical practitioners' gives you more information. If you do not already have this booklet, you can get it from your local Family Health Authority or Health Board.

If you want to ask us anything about this letter, please get in touch with us. Our phone number and address are at the top of this letter.

Yours sincerely,

IB74

Dear Sir

KEVIN REYNOLDS

DOB: 17/07/79

NHS No: 562-79-411

I refer to your application for allocation to a doctor and have to advise you that the Board has assigned you to the list of Dr K B Singh, Coatbridge Health Centre, 1 Centre Park Court, Coatbridge, who consults as follows:

By Appointment:

Monday:	9:15-11:15	3:30-5:30
Tuesday:	9:15-11:15	3:30-5:30
Wednesday:	9:30-11:30	
Thursday:	9:15-11:15	3:30-5:30
Friday:	9:15-11:15	3:30-5:30
Saturday:	Closed	

You will appreciate that to be allocated is not the ideal way to begin as a patient with a doctor but I hope with understanding on both sides that a good doctor/patient relationship will develop.

I would point out, however, that Dr Singh can request your name to be removed from his list and is not required to give a reason for the removal. Similarly, a person may change to another doctor without giving a reason.

Yours faithfully

For Assistant Director - Primary Care Services

Fracture Clinic **5.1.00.** **ST/LH**

History: This young man injured his left hand on 29.12.99. sustaining a fracture of the neck of third metacarpal which has been treated with garter strapping and wool and crepe bandage.

Review: On review today examination shows that apart from minimal bruising and swelling of the third metacarpus he has no significant problems. Finger movements are full range with no rotational deformity.

Treatment: The patient has been reassured, advised to continue with garter strapping and review again in a month for discharge.

Dear Dr Singh

KEVIN WILLIAM REYNOLDS DOB 17 07 79 HOSPITAL NO 1235053
C/O PHOENIX HOUSE 586 KEPPOCHHILL ROAD GLASGOW G22 5HS

I saw this young man in my HCV clinic on 22 March 2001. We have confirmed him to be HCV PCR positive indicating ongoing viral activity but his LFT's are normal, which would suggest minimal inflammatory activity. He has been infected for approximately 5 years and is currently in residential drug rehab. Today I reassured him that although he remains infected with hepatitis C it is not currently causing any hepatic problems. I have advised that his priority should be his addiction problem so he will return in 6 months when we will repeat his LFT's and PCR.

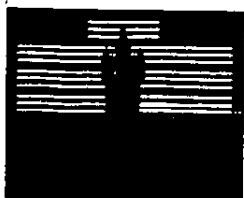

Yours sincerely

Dear Dr Singh

KEVIN WILLIAM REYNOLDS, DOB 17.07.79
PHOENIX HOUSE, 586 KEPPOCHILL ROAD, GLASGOW
HOSPITAL NUMBER: 1235053

I reviewed Kevin at Dr Fox's Hepatitis C Clinic today. He was referred up by a Medical Counsellor from Phoenix House where he is currently having drug rehabilitation. Kevin injected drugs between 1994 and November of last year, during which time he has shared needles with a number of people. He has no other risk factors for hepatitis C other than unprotected heterosexual intercourse. He reported he had never been tested for hepatitis B. He also had an HIV test in April of 1999 whilst in the local prison, this was negative. He has no significant past medical history and in particular has no history of epilepsy, psoriasis or mental health problems which can interfere with treatment. He is not on any current medication. He is a smoker of 2oz of tobacco per week. He does not drink any alcohol. He is currently living in Phoenix House and has not injected since November of last year. He currently does not take any illegal drugs.

On examination today he looked well and there was no stigmata of chronic liver disease. Cardiovascular and respiratory examination were entirely unremarkable. Kevin and I had a discussion about hepatitis C and its modes of transmission and treatment options. In the first instance I have repeated his hepatitis serology including hepatitis B and checked his other routine blood tests. I have also referred him to our Counselling Clinic, at his request for HIV testing. We shall see him back at our clinic in 6 weeks time.

Yours sincerely

Simon Sheridan

Dear Dr McGowan

KEVIN REYNOLDS 17 07 79 8133
85 BEECHWOOD DRIVE, GREENEND, COATBRIDGE

Diagnosis Hepatitis C
Previous IV drug user

I saw this young man at my clinic today. He has been an IV drug user of predominantly heroin since age 14. He has clearly shared needles but has very little else in the way of risk factors for hepatitis C. He has currently been at Phoenix House on a detoxification programme, is doing well and tells me that it has been ten and a half months since he last injected.

He current has no symptoms and nothing to find on clinical examination.

I took some time to discuss with him again the natural history of hepatitis C and he is keen to consider therapy in this respect. For this reason therefore I have arranged for him to have an ultrasound guided liver biopsy and as soon as this has been performed we shall make a decision about whether treatment is merited or not.

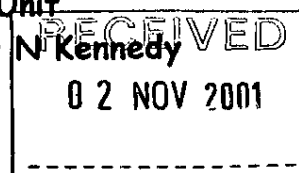

Yours sincerely

Dear Mr Reynolds

We have some recent blood results available, which show firstly that your virus is still present in your system and we shall therefore go ahead and organise a liver biopsy. One of your vitamin levels is slightly low so it would be helpful for you to attend your own doctor and receive a prescription in this respect.

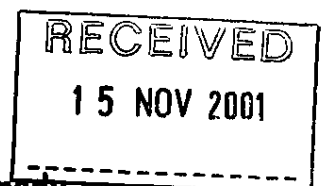

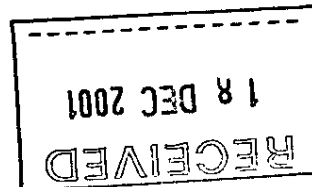

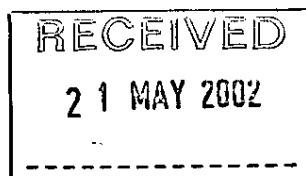

Yours sincerely

Community Addiction Team Initial Assessment

Date: 16 May 2002

Chi number:

Name: Kevin Reynolds

d.o.b. 17/07/79

Date of Assessment: 23/04/02

Address: 85 Beechwood Drive, Coatbridge (Tel: 605710)

GP: Dr Benaran

Carers/relatives involved in assessment process

1. Substance Using History

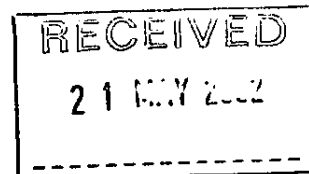

Started using cannabis at 11 years old. At 13 years old was using Temazepam. At 14 years old he began using heroin (I.V.), usage increasing over the years, on a daily basis.

2. Present Substance Use

Table of Current Use					
DAY	Substance	Amounts	Route	Length of Use	Consequences
MONDAY	Opiates	"3-5 bags"	I.V.	3-4 months	Physical/Social/ Relationship problems
TUESDAY					
WEDNESDAY					
THURSDAY					
FRIDAY					
SATURDAY					
SUNDAY					

3. Past Medical History/Past Psychiatric History

June 2001 - broken leg. Was in hospital 3 weeks ago for a liver biopsy. Was diagnosed Hepatitis C positive in 1998. No psychiatric history. Was in a rehabilitation unit (Phoenix House) last year - was drug free for almost 4 months.

Community Addiction Team Initial Assessment

4. Current Health Status

General health is OK at present, though diet is extremely poor as well as sleep pattern. Was diagnosed Hepatitis C positive in 1998, had a liver biopsy 3 weeks ago and is awaiting the results. No on any prescribed medication.

5. Social Situation

Lives at home with parents, relations strained at present due to drug abuse. Good relationship with sister. Unemployed at present. His mother is threatening to throw him out of the family home. Has no children of his own and denies any debts.

Details of Children

NAME	D.O.B.	Living with Client (if not, where)	SW STATUS

Name of Social Worker:	
Area Office:	Telephone No.

6. Legal History

Theft, breach of peace, fraud. Case pending for an unpaid fine related case. He is not worried regarding this. Nil else pending.

7. Problems Arising From Substance Use

General physical health has been poor in the past, weight loss, abscesses etc. Many regular problems identified due to illicit drug misuse. Diet and sleep pattern poor at present, having problems with the law. Most of his friends/associates are also drug abusers. Admits to thieving to fund habit.

Community Addiction Team Initial Assessment

8. Client's Perceptions of Their Substance Use

States he still enjoys the feeling heroin gives him, though feels the consequences outway the positives!

Previous Interventions		
DATE	INTERVENTION	OUTCOME
Numerous Detox's over the	Last 5-6 years via CAT	Short term
Jan 01 - Phoenix House Rehab	For 1 year	Good - 4 months drug free

9. What Does the Client Wish to do About Their Substance/Alcohol Use?

Requesting a methadone detox, advised same was probably more realistic to attempt stabilisation period/methadone maintenance. Client agreeable to same.

10. [a] With What Other Services is the Client Involved [Health, Social, Legal etc]?

Agency	Contact Name	Telephone
	Helen Cullen	753341

10. [b] Is the client aware that information will be shared with other agencies?

YES ☒

NO ☐

Dear Dr McGowan

KEVIN REYNOLDS D.O.B. 17.07.79 8133
85 Beechwood Drive Greenend Coatbridge ML5 4RB

Diagnosis: (i) Hepatitis C positive
(ii) Previous intravenous drug use

Mr Reynolds attended Dr Kennedy's ID clinic for review today. He complains of feeling nauseous with poor appetite and significant weight loss of 3½ stone in the past 4 months. He also describes a lack of energy and feeling "run down". He has no other symptoms of diarrhoea, cough, shortness of breath, dysuria, dysphagia and denies any drug use or alcohol intake.

On examination he was afebrile with a heart rate of 80. He had palpable lymph nodes and no oral thrush. His chest was clear and his abdomen was non tender with some muscle guarding.

His liver biopsy (25.03.02) was consistent with some mild chronic Hepatitis with stage 1/grade 3.

At present he does not warrant any treatment for his Hepatitis C infection. I have arranged for him to have some blood tests done today. We will otherwise continue to follow him up regularly and plan to see him in 6 months time with repeat liver function tests. In meantime he has been advised to abstain from alcohol and any recreational drug use.

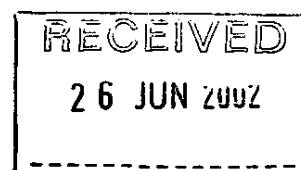

Thank you for your ongoing care.

Yours sincerely

Notes:

CLIENT AGREEMENT

This is an agreement between Kern Reynolds the key worker Alex Murphy
 and the prescribing doctor K. Singh on condition of receiving the
 proposed medication: Methadone

to commence from 23/7/99.

The conditions of this contract are as follows:

1. To maintain an agreed frequency of contact Every Wk with your key worker.
2. I will provide a urine specimen for drug screening as requested, failure to provide a urine specimen will be considered a breach of contract.
3. If a urinalysis result, is negative for prescribed medication, then I will be in danger of losing my prescription for medication.
4. If a urinalysis result, is positive for non-prescribed drugs, then I will be in danger of losing my prescription for medication.
5. I will obtain my script fromChemist.
6. My medication will be decided by negotiation between myself, the Key Worker, and the prescribing Doctor.
7. Threats of violence to staff members or others will be a breach of this contract.
8. I will not demand extra supplies of the proposed medication from any Doctor or expect lost scripts to be replaced for whatever reason.
9. Any change in the prescribing of drug medication will be negotiated with the prescribing Doctor and the Key Worker.
10. Additional conditions/goals.

.....T.B. keep your appointment at the
clinic in surgery and come in time

Failure to comply with the above conditions will constitute a breach of the contract.

A copy of this agreement will be retained by the prescribing doctor and/or the key worker, your General Practitioner and yourself.

I have read, understood and agree to the above conditions.

Situation

Hepatitis Nurse Led Clinic – University Hospital Monklands – 20th April 2026

Background

1. Hepatitis C – treated with Maviret for 8 weeks.

Assessment

Kevin attended the Hepatitis Nurse Led Clinic for a Hepatitis C PCR test more than 12 weeks after his treatment. I am pleased to confirm that this has returned a negative result indicating that the treatment has been successful and he can be considered cured of Hepatitis C infection. As his Fib 4 score was low pretreatment, he does not require any further follow-up, and I have discharged him from the Hepatitis Clinic.

Yours sincerely

Dear Dr Connolly

Patient Name: Kevin Reynolds
Patient date of birth: 17/07/1979
Patient Address: 103 Old Monkland Road, Coatbridge, ML5 5EX

Mr Reynolds, a 46-year-old male, attended the clinic today for a flow test, post-void bladder scan, and intermittent self-dilatation (ISD) teaching. He is known to the urology service with a history of poor urinary flow and recently underwent a general anaesthetic cystoscopy and urethral dilatation for a submeatal stricture.

He was well today, with no signs of urinary tract infection and no bothersome urinary symptoms. His flow test was undiagnostic as he voided only 107 ml, and his post-void residual volume was 5 ml. ISD was taught using Hi-Slip Plus 14 French female catheters, and he expressed a preference to carry out ISD at home.

GP recommendation: Please add Hi-Slip Plus 16 French female catheters to the patient's prescription.

He will return in six weeks for a repeat flow test and ISD review.

Yours sincerely

Roshni Jose
Urology Specialist Nurse

Dear Dr Connolly

Patient Name: Kevin Reynolds
Patient date of birth: 17/07/1979
Patient Address: 103 Old Monkland Road, Coatbridge, ML5 5EX

Mr Reynolds attended the clinic on 11/03/26 for a trial without catheter (TOV). He had been catheterised following a GA cystoscopy and urethral dilatation using S-shaped dilators. He is known to have a sub-meatal stricture and a history of poor flow rate. He was commenced on Tamsulosin in October 2025. His U&Es were normal as of 06/11/25, and his PSA was 1.6 as of 01/10/25.

Mr Reynolds was feeling well on 11/03/26 with no signs of UTI. He reported severe constipation and was advised to contact his GP for laxatives. A TOV appointment was booked for 18/03/26.

18/03/26 – TOV Review

Mr Reynolds attended the clinic for his scheduled TOV. His constipation had resolved; however, he had stopped taking Tamsulosin. He was advised to re-commence the medication. Another TOV appointment was arranged for 25/03/26.

25/03/26 – TOV Review

Mr Reynolds attended the clinic for his repeat TOV. He was feeling well with no signs of UTI and no complaints of constipation. He confirmed he was taking Tamsulosin.

A size 16Fr catheter was removed with verbal consent. He returned to the clinic after passing urine twice. His post-void residual volume was 1mL. He is aware to attend A&E in the event of urinary retention. He declined intermittent self-dilatation today.

A follow-up appointment has been arranged in four weeks' time for a flow test and discussion of ISD.

Yours sincerely

Dear Dr Connolly

Patient Name: Kevin Reynolds
Patient date of birth: 17/07/1979
Patient Address: 103 Old Monkland Road, Coatbridge, ML5 5EX

11/03/2026

Mr Reynolds, a 46-year-old gentleman, attended the clinic for a Trial of Void (TOV). He had been catheterised following a general anaesthetic cystoscopy and urethral dilatation using S-shaped dilators. He is known to have a sub-meatal stricture and a history of poor urinary flow. His U&E results were normal on 6 November 2025, and his PSA was 1.6 on 1 October 2025. He has been taking Tamsulosin since October 2025.

He reported feeling well with no symptoms of urinary tract infection but complained of severe constipation. He was advised to contact his GP for laxatives. A further TOV appointment was arranged for 18 March 2026 at 8 am.

18/03/2026

Mr Reynolds attended for his scheduled TOV. His constipation had resolved; however, he had stopped taking Tamsulosin. He was advised to recommence the medication. Another appointment was arranged for 25 March 2026.

25/03/2026

Mr Reynolds returned for TOV and reported feeling well, with no signs of urinary tract infection and no further issues with constipation. His 16Fr catheter was removed with verbal consent. He subsequently returned to the clinic having passed urine twice, and his post-void residual volume was 1ml.

He declined intermittent self-dilatation (ISD) due to ongoing soreness. A further appointment has been arranged for a flow test and ISD education.

He has been advised to attend A&E urgently should he experience symptoms of urinary retention.

Yours sincerely

Dear Dr Connolly,

Discharge Summary

Patient Name: Kevin Reynolds
Patient date of birth: 17/07/1979
Patient Address: 103 Old Monkland Road, Coatbridge, ML5 5EX
Date of admission: 20/12/2025
Date of discharge: 20/12/2025

Diagnosis-
Prolonged flow

Findings-
Severe stricture starting from distal urethra
Unable to tolerate dilation under local anaesthesia

Procedure: Flexible cystoscopy

I saw Mr Reynolds in the flexible cystoscopy suite today. He was referred due to an abysmal flow rate. He is getting treatment for hepatitis and has unexplained weight loss. He is managing to dribble very slowly at the moment.

On flexible cystoscopy, I encountered a very dense sub meatal stricture in his urethra. I attempted self-catheter dilation and I went down to a size 10 french but was still unable to dilate it. He was in a lot of distress following the procedure and I had to stop. He will require a general anaesthetic bouginage +/- s-shaped dilation if there are any strictures in his proximal urethra. I will copy this letter to my theatre scheduler colleagues for this to be added on as an urgent.

Follow up:
Urgent urethral bouginage +/- s-shaped dilation

Yours sincerely

Lieo Jiun Tan

Dear Kevin Reynolds

Patient Name: Kevin Reynolds
Patient date of birth: 17/07/1979
Patient Address: 103 Old Monkland Road, Coatbridge, ML5 5EX

Many thanks for attending for your CT scan carried out under the RCDS on 17th December 2025.

There is no CT demonstrable evidence of malignancy seen on scan. Incidental findings include:

- Emphysema within both lungs - this is damage to the air sacs in the lungs. Many people do not realise they have it. It is a largely preventable condition. You can significantly reduce your chances of developing it if you avoid smoking. If you already smoke, stopping can help prevent further damage to your lungs before it starts to cause troublesome symptoms. Please see your GP should your symptoms worsen.
- Inflammation within the right lung – if you feel symptomatic please discuss with your G.P.

Should your symptoms persist please see your GP for further review.

Yours sincerely

Dear Dr McColgan

Patient Name: Kevin Reynolds
Patient date of birth: 17/07/1979
Patient Address: 103 Old Monkland Road, Coatbridge, ML5 5EX

Situation

I had a telephone consultation with Mr Reynolds today, 5th December. As you are aware he was referred to the service with:-

- Weight loss
- Fatigue

Background

Kevin advised that he has lost three stone in weight over the course of the last three to four months and this is unintentional and despite no loss of appetite. He believes he eats very well and has also been buying Ensure Plus to try and combat the weight loss. He advises he has been referred to the Dietician as it has been quite expensive buying supplements. He has no nausea or vomiting.

He denies any change in bowel function. He has been having obstructive urinary voiding. He has been reviewed by Urology and currently waiting on cystoscopy.

He has persistent unexplained fatigue.

Co-morbidities/Past Medical History:

- Hepatitis C diagnosed in 1998 whilst in HMP Glen Ochil. Did not have treatment. Had recent review by Infectious Diseases and currently on his second week of an 8 weeks course of Mayvret.
- Previous ex-IV heroin user. Has been abstinent for 16 years
- Known gallstones noted on ultrasound October 2025
- Smoker of 15 cigarettes per day
- No alcohol intake

Lives with his sister. Currently works in building construction however has been off sick due to his symptoms. Normally independent and active but he is struggling with the fatigue.

Assessment

Haematology blood bundle incomplete. Shows raised platelets 552, white blood count 14.8 and neutrophils 11.4. Ferritin of 566. Kevin advised that he is currently on antibiotics for a urinary infection. HbA1c is elevated at 46. Coeliac serology has been omitted.

Biochemistry blood bundle complete and normal with the exception of a raised calcium 2.63.

2/2

Additional Tests Include:

- 11.11.25 qFIT <7 (no bowel symptoms)
- 06.11.25 Magnesium normal
CRP elevated at 68
Vitamin D normal
- 25.09.25 Iron low at 10 and transferrin low at 1.9
Gamma GT normal
AST normal
- 15.09.25 B12 and folate – low folate <2 and currently on folic acid replacement

Microbiology

Urine for chlamydia, gonorrhoea negative.

ECOG performance status 1 and Dalhousie frailty score of 3 due to current symptoms.

Recommendations

- 1 Update RCDS bloods to include coeliac, repeat calcium. Discuss with Kevin if blood borne virus/HIV testing has been discussed with him. He advised that at his last visit at Infectious Diseases they had spoken to him about this and unfortunately, he had difficulty with obtaining bloods at the clinic however he is due for return within the next week or two for further assessment and bloods. I will leave this with the Infectious Disease Team.
- 2 CT.

Yours sincerely

Dear Dr Connolly

Patient Name: Kevin Reynolds
Patient date of birth: 17/07/1979
Patient Address: 103 Old Monkland Road, Coatbridge, ML5 5EX

Situation

Patient is commencing treatment for Hepatitis C – University Hospital Monklands – 21st November 2025

Background

Medication: Maviret
Duration of Treatment: 8 weeks

Assessment

Kevin is due to commence treatment for his Hepatitis C infection with an 8-week course of Maviret.

I will ask that an appointment is sent out to obtain an end of treatment HCV PCR.

We will contact you again when treatment has been completed and 12 weeks post treatment, or earlier if any significant issues arise. If you require any further information, please do not hesitate to contact me on 01698-752445.

If you commence the patient on a new drug it is recommended that drug interactions can be checked on www.hep-druginteractions.org.

Yours sincerely

Consultant: Nurse Krystle Graham

Dear Dr Kirkwood

Patient Name: Kevin Reynolds
Patient date of birth: 17/07/1979
Patient Address: 103 Old Monkland Road, Coatbridge, ML5 5EX

Thank you for referring this 46 -year-old gentleman to the nurse led high PSA clinic. He presented with lower urinary tract symptoms of nocturia, poor flow, dribbling and incomplete emptying. He has also lost 1½ stone weight loss in six weeks. A PSA was 8.4 and then went to 1.6 which is within normal parameters for a gentleman of his age.

As he had an abnormal rectal examination, an MRI was requested. I contacted him today with his results and informed him that there is no significant lesion within the prostate. His prostate volume is of a normal size at 30cc and his PSA density is 0.05 based on a PSA of 1.6.

My colleague, Lorna Wilson, has already arranged a flexible cystoscopy to be carried out due to his obstructive voiding and my colleagues will keep you informed of his progress.

With regards to his PSA, no further follow-up is required in the high PSA clinic.

Yours sincerely

Krystle Graham

Consultant: Nurse Sharon Woods

Dear Dr Connolly

Patient Name: Kevin Reynolds
Patient date of birth: 17/07/1979
Patient Address: 103 Old Monkland Road, Coatbridge, ML5 5EX

Situation

Hepatitis Nurse Led Clinic – University Hospital Monklands – 30th October 2025

Background

1. Hepatitis C PCR Positive
2. Recently lost 1 ½ stone in 6 weeks
3. Undergoing investigations for enlarged prostate and urinary symptoms

Assessment

I met this man at the Hepatitis Nurse Led Clinic. He tells me that he was diagnosed with Hepatitis C in approximately 1998 whilst in HMP Glenochil. He advised me that he underwent a liver biopsy in 2002 in University Hospital Monklands but did not progress to Hepatitis C treatment at that time. Unfortunately, this predates clinical portal and his paper records have not been scanned on to the computer so I am unable to gain access to further information regarding this.

He has a history of drug use and this is his most likely route of acquisition. His past medical history is unremarkable other than recent weight loss of 1 ½ stone in 6 weeks with a raised PSA of 8.8 and an enlarged prostate with urinary difficulties for which he is undergoing investigation.

His current medication comprises of Tamsulosin 400mgs Od, Folic Acid 5mgs Od and Ferrous Fumarate 210mcg Od.

He does not drink any alcohol and has never had an alcohol problem. He stopped using drugs over 16 years ago but prior to this was injecting heroin. He is a current smoker with no inclination to stop at present and declined referral to Smoking Cessation Service.

He has no current partner and I have given him advice regarding the use of condoms should he enter a new relationship.

There are no mental health difficulties and he does not envisage any problems with completing an 8-week course of Hepatitis C treatment.

He works in the construction industry but is currently off sick at present. He has good family support and his sister attended the appointment with him.

He was seen by our Pharmacy Technician who will check for drug to drug interactions.

I have calculated his Fib 4 score to be 0.65 indicating that advanced fibrosis is unlikely. He had recent abdominal ultrasound which shows a normal appearance in his liver.

I have discussed Hepatitis C treatment and explained that the likely treatment will be Maviret 3 tablets once daily for 8 weeks. I will discuss him at our Hepatitis MDT and keep you updated with his progress.

Recommendations

Acute actions

1. For discussion at Hepatitis MDT.
2. Pharmacy Technician to check for drug to drug interactions.

Primary care and patient actions

Yours sincerely

Dear Dr Connolly

Patient Name: Kevin Reynolds
Patient date of birth: 17/07/1979
Patient Address: 103 Old Monkland Road, Coatbridge, ML5 5EX

Thank you for referring Mr Reynolds. He presented with nocturia, dribbling, poor flow and incomplete emptying. He has also had 1½st weight loss in six weeks.

A repeat PSA had dropped from 8.4 to 1.6 and he attended the urology suite on 9 October for repeat DRE.

This was found to be firm with a hard right lobe and an MRI scan was requested. We also carried out a flow and scan and this has shown a very flat, prolonged, obstructive void of 193ml, maximum flow of 2.3ml/sec and a post void scan of 114ml. He commenced Tamsulosin on 22 September and I would advise that this remains on his repeat prescription.

I have referred him for an urgent flexible cystoscopy for his obstructive voiding. We will keep you up-to-date with all the results in due course.

Yours sincerely

Dear Dr Kirkwood

Patient Name: Kevin Reynolds
Patient date of birth: 17/07/1979
Patient Address: 103 Old Monkland Road, Coatbridge, ML5 5EX

Thank you for referring Mr Reynolds with a one-off PSA of 8.8, nocturia and dribbling for five weeks with the sensation of incomplete emptying. He has also lost 1½ stone in weight loss.

As per protocol, a repeat PSA and MSSU were required prior to further investigation and I have contacted him today to advise his PSA has returned to normal limits of 1.6 with no evidence of infection, which is very reassuring.

You mentioned his prostate examination felt an enlarged but smooth prostate, but also hard. Unfortunately, this was not repeated in secondary care so he would still require an MRI for abnormal rectal examination. I have scheduled a further review on 9 October 2025 to repeat his DRE.

I also plan to carry out a flow and scan and assessment of his urinary symptoms. I will keep you up-to-date with his progress in due course.

Yours sincerely

Dear Dr

Information proved by Public Health Scotland (PHS) suggests that this patient may have previously tested positive for Hepatitis C. There is no record of the patient having received successful HCV treatment, having migrated elsewhere or having died.

We have contacted the patient (copy of letter sent enclosed) to try to re-engage them in care, with a view to initiating Hepatitis C treatment if indicated.

This letter is to information only. There is no expectation of any action (s) from the patients GP or other Primary Care Colleagues.

Yours sincerely

Chi No. 1707795134

Dear Mr Reynolds

DOB: 17/07/1979

We are writing to you as our records show that you may have previously tested positive for a potentially serious liver condition. The reason we are contacting you is either because:

- we have no record of you having been treated by us,
- your treatment was previously unsuccessful or
- the outcome of your previous treatment remains unknown and requires a blood test to clarify.

This liver condition is curable with a short course of tablets.

We would like you to call the NHS Lanarkshire on 01698 751 039 to discuss testing and/or treatment. If we are unable to answer your call, please leave a message stating your name, date of birth and a contact number and we will phone you back.

Should we need to re-test you, we can arrange for this to be done at a location close to you and if you require treatment, can arrange for you to access medication from a local pharmacy.

If you have had treatment elsewhere then please phone us so we can update your records.

We will try to contact you by telephone if we do not hear from you after three weeks of us sending this letter – if you would prefer us not to contact you or have any concerns about the content of this letter, please call us on 01698 751 039.

Yours sincerely

Dear Dr Connolly,

Discharge Summary

Patient Name: Kevin Reynolds
Patient date of birth: 17/07/1979
Patient Address: 85 Beechwood Drive, Coatbridge, ML5 4RB

This right hand dominant groundsman sustained an avulsion fracture to the right 4th metacarpal on 20/03/2023. He was seen by my colleague and given advice with regards to return to work but did have full range of movement. He was due for a telephone review today but unfortunately both his numbers were unobtainable and so I was unable to get in touch with him. We have copied the letter to him so that if he does require our service then he can contact us for review.

Yours sincerely

Debbie Pipe

Dear Colleague,

REQUEST FOR RE-REFERRAL OF UNTREATED HEPATITIS C (HCV) PATIENTS WHO HAVE BECOME LOST TO FOLLOW-UP

Patient details:

1707795134
17/07/1979 M
REYNOLDS Kevin
85 Beechwood Drive
Coatbridge
Lanarkshire ML5 4RB

We hold a database on all patients with Hepatitis C (HCV) who have been referred to us for assessment and treatment. A recent 'look back' exercise was undertaken to identify patients on the database who meet the following criteria:

- Not currently under active follow-up with our service
- Not known to be deceased (based on Trak)
- Not previously treated for HCV by us, OR may have previously have received treatment but a successful treatment response has not been established

We are concerned that these 'lost to follow-up' patients who meet the criteria above are currently unable to potentially benefit from recent major advances in HCV therapy. We are therefore very keen to offer them an opportunity to re-engage with our service.

The patient referred to at the head of this letter meets the criteria, according to our records. We obviously do not know whether s/he actually wishes to be seen again for assessment and potential HCV therapy. However, we would be very grateful if you could make enquiries with the patient in question to discuss - and encourage - re-referral. Patients can be re-referred electronically (to 'Hepatitis' or 'Infectious Diseases' at Monklands Hospital), or using a traditional letter.

Thank you very much indeed for your help with this matter. If you have any further questions or queries about this, please do not hesitate to contact me.

Yours sincerely

Dear Dr McCartney

Patient Name: Kevin Reynolds
Patient date of birth: 17/07/1979
Patient Address: 85 Beechwood Drive, Coatbridge, ML5 4RB

Situation

Right corneal epithelial defect

Background

This patient presents with a one day history of a red eye and right eye irritability. Today he tells me that he woke up with increased pain, photophobia and watering associated with blurring of his vision in the right eye. He tells me that he works as a ground worker but does not recall anything going into his eye. He does not describe any discharge and is not a contact lens wearer.

Assessment

On examination visual acuity was right eye 6/19, improving to 6/9.5 with pinhole, N8 and left eye 6/7.5, N6. He had moderate conjunctival injection and corneal examination revealed an epithelial defect just below the visual axis with very minimal central staining less than 0.5 mm. There is no infiltrate. Anterior chamber was quiet.

Recommendations

I have prescribed Chloramphenicol ointment six times a day and asked the patient to follow up in four days time. I have explained to the patient if his symptoms get worse over the next few days he should seek further advice.

Yours sincerely

GREENOCK PA15 2NE

30.08.07 This 28 year old man sustained a twisting injury to his knee when playing football. He presented to the Emergency Department with increased pain and swelling and unable to weight bear. He was assessed by orthopaedic doctor who aspirated 120ml of blood from his left knee. Of note there is a history of a tibial plateau fracture in this left knee which required 2 screw fixation a year ago.

On examination his pain and swelling has significantly improved and he is now mobilising without too much difficulty. There is still a mild effusion in his left knee and he still lacks 10° to full extension compared to the right side. He also has reduced flexion compared to the right side by approximately 15°. Lachman's and anterior draw test were both unremarkable and I could not elicit any laxity when compared to the right side. Similarly assessing his collateral ligaments was unremarkable compared to the right.

I have advised Mr Reynolds to be cautious with this knee and have given him some tubigrip. I have advised him to avoid participating in sports such as football for the next 4 to 6 weeks, however, I am under the impression that he will be non compliant with this. Discharged.
