06/02/2026 Letter encounter from patient Hospital Letter Monklands Hospital Urology Ms Sharon Scott

06/02/2026 Nursing care - injections Consent implied SIPC's adhered to BP - 154/92 Patricia has been at the hospital a couple of times this week with cardiac issues. She was told last night they thought she had AF. The hospital called this morning and wish her to re-attend today. Patricia asked if her Aranesp injection could be causing this, as these are new symptoms since commencing her injection. A quick search on BNF and EMC shows there may be a link between Aranesp and cardiac disorders. Patricia has decided not to take today's injection and she shall discuss with the cardiologist when she goes back to the hospital this morning. I have re-booked Patricia for Monday afternoon. She is hoping the hospital will be able to reassure her today. GMcQ Ms Gayle Mcquade

10/10/2025 Telephone encounter patient very upset re being told re positive qfit is concerned may have bowel cancer and felt last night was going to end life as couldnt wait for an op appt to find out, then reports wants me to cancel appt as doesnt want to get checked. would rather just not know. is upset re being called at 555pm and felt left with thoughts racing overnight/worried sick/not sleeping/has triggered anxiety. has PCMHNLN next week re anxiety. tearful and upset on the phone. wishes that i cancel her referral as shed rather not no and doesnt want to go to the appt -advised best to await letter coming through and if she wishes to cancel do it then as she may change her mind in the meantime regarding investigations so better a referral remains in place. tried to reassure that positive qfit is not definitiely a cancer just was needing to rule out things but lots of other causes for anaemia which she has had on off for some time including low dietart iron (has eating disorder) and periods can make people anaemic, and positive qfit not necessarily from a cancer, other benign causes too. offered diaz to help her over the weekend. offered SH to phone next week, she doesnt want to speak to him but if changes mind will call back next week to chat further. patient apologetic to me re her reaction at start of phone call and was calmer by end of phone call. Dr Liz Stafford

09/10/2025 Administration NOS PC to discuss +ve Q-fit and concern of GI cancer. Explained would need camera tests and i am referring urgently for these. Patricia understanding. RE: haematuria, this is longstanding and her renal consultant has been monitoring this.

Dr Stuart Howard

01/10/2025 Telephone triage encounter Situation-telephone call following referral from Gp due to anxiety. Background- Lives with dad and has good support from brother who lives nearby. Currently unemployed. Assessment- Describes symptoms of anxiety/low mood for several years, feels same has worsened in recent months, unable to identify trigger for same. Describes variable sleep pattern, reduced appetite, feeling overwhelmed, avoiding going out due to feeling anxious, nil suicidal thoughts/intent. Nil alcohol, admits to long term cannabis use, stopped same 2 months ago as recognised was not beneficial. recommendation- discussed anxiety/mood management and recommended setting daily achievable goals. Discussed benefits of exercise and encouraged to incorporate walk into daily routine. Advice also given on eating little and often. Discussed illeffects of cannabis on mental health and encouraged to continue to abstain from same. Advice given on challenging avoidance behaviours and directed to Daylight via lanarkshire mind matters for further information/self help. Agreed referral to LAMh for 1:1 support around anxiety/mood management. Agreeable to engaging with discussed resources and no further input required at this time. Advised to contact Gp if requiring further support. Linda thomson primary care mental health and wellbeing team. Ms Linda Thomson

30/09/2025 Administration NOS Still not handed in Q-fit. Has been reminded twice by myself and each time said she would do so. Had explained the urgency of this when I called on 15/09. As still not handed in and delaying further Ix. I have asked reception to book her in to see me to discuss. Dr Stuart Howard

17/09/2025 Failed encounter telephone call on 2 occasions during allocated appointment time, however no answer received. Message left t contact practice. If patient contacts within 3 weeks appointment can be rescheduled, outwith this timeframe please refer back to gp.

Linda Thomson primary care mental health and wellbeing team. Ms Linda Thomson

15/09/2025 Telephone encounter Called to discuss Q-fit. Still not handed this in. Explained test for blood and important to rule this out as potential sinister cause of anaemia. Patricia understanding and will get the Q-fit handed in. Dr Stuart Howard

05/09/2025 Consultation FTF came about swelling RHS face but infact dental abscess - advised to contact dentist today , Temp 37.1 Discussed recent anxiety . Mood irritable . No obvious stress other than health concerns . Refer PCMHNLN . No SI . Dr Anne M McGregor

25/08/2025 Telephone encounter Called RE: Response from gastro. Hasnt handed in Q-fit yet, will do this tomorrow and once I get the result will rerefer back to gastro. Dr Stuart Howard

Dear Ms Hunt

Patient Name: Patricia Hunt
Patient date of birth: 12/09/1982
Patient Address: 22 Cuilmuir View, Croy, Glasgow, G65 9HH

I tried to contact you my telephone recently but was unable to get through. It was to chat to you about your most recent kidney bloods tests, which showed a slight change.

The blood tests suggest that you are very dehydrated and I wonder if you might be able to increase your oral fluid intake. As far as I am aware, you are not on any water tablets or anything like that, but if these have been started then I think they should be stopped again.

I can see that we are due to catch up at clinic again in early July. We will be updating your kidney blood tests prior to that appointment and you should already have a form with my name on it. Hopefully with some increased fluid intake the blood tests will settle back down again.

If you have any questions about this, then please do not hesitate to contact me through my secretary on 01698-752428.

Many thanks.

Yours sincerely

Dr Claire Nolan

Dear Mrs Hunt

Patient Name: Patricia Hunt
Patient date of birth: 12/09/1982
Patient Address: 22 Culmuir View, Croy, Glasgow, G65 9HH

We met at my kidney clinic recently and your blood tests from that clinic showed a slight dip in your overall kidney function to 18%. The pattern of the blood tests suggested you might be a bit dehydrated and I wonder if we might repeat these blood tests over the next week or so. I enclose a blood form with my name on it and I would be grateful if you would contact my secretary when you have had blood tests taken. I will keep my eye out for the results.

In the meantime, I would be grateful if you might increase your oral fluid intake during the day to at least 2 litres or possibly 2-3 litres per day.

Many thanks.

Yours sincerely

Dr Claire Nolan

Dear Dr MacInnes

Patient Name: Patricia Hunt
Patient date of birth: 12/09/1982
Patient Address: 22 Cuilmuir View, Croy, Glasgow, G65 9HH

Diagnosis

1. CKD G4 A3 (PCR 46 July 2025)
2. Nephrocalcinosis
3. Non-steroidal anti-inflammatory overuse
4. Hypocitraturia
5. Renal tubular acidosis type 1 – for genotyping at next clinic
6. Anorexia
7. Iron deficiency anaemia
8. Recent inpatient stay for sepsis/septic shock secondary to pyelonephritis & urinary obstruction
9. Atrial fibrillation

Actions from clinic

1. Updated renal biochemistry
2. Renal genetic screen for renal tubular acidosis
3. General Nephrology follow-up 3 months

It was lovely to meet with Mrs Patricia Hunt at my General Nephrology Clinic today. She was doing well and her weight had increased a bit to 54.6kg (it was 48.2kg at the last clinic).

I have updated all renal parameters and the results will be at the bottom of this letter. Assuming stability, I will catch up with Patricia in 3 months' time.

Thanks again.

Yours sincerely

Dr Claire Nolan
Consultant Nephrologist and Physician

Dear Dr MacInnes

Patient Name: Patricia Hunt
Patient date of birth: 12/09/1982
Patient Address: 22 Culmuir View, Croy, Glasgow, G65 9HH

Diagnosis

1. CKD G4 A3 (PCR 46 July 2025).
2. Nephrocalcinosis.
3. Non-steroidal anti-inflammatory overuse.
4. Hypocitraturia.
5. Renal tubular acidosis Type 1 – for genotyping at next clinic.
6. Anorexia.
7. Iron deficiency anaemia.
8. Recent inpatient stay for sepsis/septic shock secondary to pyelonephritis and urinary obstruction
9. Atrial Fibrillation

Actions from clinic

1. Change of Sodium Bicarbonate dose of 2gms three times daily.
2. Increase Bisoprolol to 7.5mg daily
3. Patient does not wish to continue with Darbepoetin
4. General nephrology follow up 27th of April at 13.15 hours

I met with Ms Hunt at my general nephrology clinic on the 26th of February. Her renal parameters are stable. Specifically, her potassium was 4.6 and bicarbonate 19 on the 9th of February.

She has now been commenced up Bisoprolol 5mg for treatment of atrial fibrillation. Her rate was 116 at clinic today and therefore I have asked her to increase her Bisoprolol to 7.5mg daily. I have given her a 2 week supply of this with the expectation at your practice.

Patricia has also informed me that she does not wish to continue with her Darbepoetin. She believes this caused her atrial fibrillation. I have copied this letter to the renal anaemia team so that they cancel her prescription. Many thanks.

Yours sincerely

Dear Dr MacInnes

PatientName: Patricia Hunt
Patient date of birth: 12/09/1982
PatientAddress: 22 Cuilmuir View, Croy, Glasgow, G65 9HH

This lady is has been under the renal team for management of her renal impairment:

Diagnosis:

1. CKD G4 A3 (PCR 46 July 2025).
2. Nephrocalcinosis.
3. Non-steroidal anti-inflammatory overuse.
4. Hypocitraturia.
5. Renal tubular acidosis Type 1 – for genotyping at next clinic.
6. Anorexia.
7. Iron deficiency anaemia.
8. Recent inpatient stay for sepsis/septic shock secondary to pyelonephritis and urinary obstruction

She was due to come in for surgery on her renal stones but she failed to attend on the day- when I reviewed this in the pre-assessment clinic I found she had an NTproBNP level of over a 2000. She had given a history of shortness of breath to the pre-assessment nurses and therefore I arranged an outpatient echocardiogram (3/2) - this has picked up she is now in atrial flutter at a rate of 107bpm, unfortunately we were not alerted when she was in the hospital so I contacted her via the phone today. She states she feels well and denied any shortness of breath, cough, haemoptysis, leg swelling or chest pain. However I have managed to arrange for her to see her GP today as an emergency and will follow up the outcome of the consultation. She tells me she is due back in clinic at the end of February so I thought I should update you.

Kind Regards.

Dear Dr MacInnes,

Discharge Summary

Patient Name: Patricia Hunt
Patient date of birth: 12/09/1982
Patient Address: 22 Cuilmuir View, Croy, Glasgow, G65 9HH
Date of admission: 05/02/2026
Date of discharge: 05/02/2026

This 43-year-old GP referral on the 5th of February 2026.

The patient attended Cardiology for an Echo and was found to be in atrial flutter. She has mild LVSD and borderline hypertension. The patient has a background of chronic kidney disease stage 4, Nephrocalcinosis, Renal tubular acidosis and IDA.

The patient was started on 2.5mg of Bisoprolol OD and Edoxaban given EGFR. The patient was asked to return to Ambulatory Care for repeat U & E's and ECG.

On returning to Ambulatory Care bloods were relatively static, ECG showed AF 106bpm. The patient was discussed with Dr MacLean and we have decided to increase the patient's Bisoprolol to 5mg once a day. The patient has been discharged back to GP care and already has Renal follow up.

Yours sincerely

Rosanne Monaghan

ECHO: Technically difficult study. Patient tachycardic throughout, please see ECG attached.

LV dimensions measured by PLAX.

Normal LV wall thickness and cavity size.

Assessment of LV wall motion was difficult due to heart rhythm and rate. The basal inferior wall appears reduced. The remainder of the LV is thought to retain reasonable contractility. Overall LV systolic function is thought to be mildly impaired. No accurate LV ejection fraction possible.

Normal LA size.

Right heart chambers are not dilated. No obvious RV wall motion abnormality seen.

3 cusp aortic valve opens well. No aortic stenosis, trace of regurgitation detected.

Mitral valve leaflets open freely. No mitral stenosis mild jet of regurgitation detected.

Tricuspid valve leaflets open freely, trivial regurgitation detected. Estimated pulmonary artery systolic pressure= TRmaxPG (25mmHg) + RAP (5mmHg).

No pulmonary stenosis or obvious regurgitation detected.

CHI 1209823403

Dear Ms Patricia Jane Hunt

We are writing to you in regard to your recent admission to University Hospital Monklands.

During your stay in hospital, another patient on the ward at that time was found to be carrying a gut bacterium (germ) that is resistant to many antibiotics. This germ is known as a Carbapenemase Producing Enterobacteriaceae or 'CPE'. The germ normally lives harmlessly in the gut and usually does not cause any symptoms. We have included an information leaflet for your information.

There is no action for you to take except should you be admitted to hospital please mention this letter about CPE to staff caring for you.

Please do not hesitate to contact the Health Protection Team on the number above if you wish to discuss further.

Yours sincerely,

A handwritten signature in black ink that reads 'A. Smith-Palmer'.

Dear Patricia Hunt

Patient Name: Patricia Hunt
Patient date of birth: 12/09/1982
Patient Address: 22 Cuilmuir View, Croy, Glasgow, G65 9HH

I have received communication from our Endoscopy department at Wishaw that you were contacted to attend for a colonoscopy. I had arranged this for you in the context of your recent admission as you were found to be significantly anaemic and deficient of iron. A previous test had shown that you were losing microscopic amount of blood on a stool sample. This scope was arranged to rule out a tumour in your gut as a cause for your anaemia and blood loss.

It appears that you did not make contact with the Endoscopy Unit to arrange an appointment. As a result, they have removed you from the waiting list.

I will not reappoint you immediately, but if you wish to be considered for a scope, please make contact with my secretary on the above given number and I will put in a new request.

Thank you.

Yours sincerely

Dear Patricia Hunt

PatientName: Patricia Hunt
Patientdate of birth: 12/09/1982
PatientAddress: 22 Cuilmuir View, Croy, Glasgow, G65 9HH

We met at my kidney clinic on the 15th of December.

Your blood tests at that time are pretty steady showing kidney function at 23%. The potassium salt was normal and the bicarbonate level in your blood was also very good at 26.

I think we could reduce the Sodium Bicarbonate tablets to just 1gm 3 times a day. When we next meet at clinic I will send a specimen of urine to the lab to check for your calcium excretion in the urine. I had hoped to this when we had met last time but the result is not available. If you have a kidney condition where you pass increased amounts of calcium into the urine then we will certainly look at trying to further reduce and stop your Sodium bicarbonate, and use the Potassium Citrate medicine instead.

Best wishes.

Yours sincerely

2. General nephrology follow up February 2026
3. Reduce Na Bicarb tablets to 1g tid

It was lovely to meet with Patricia Hunt at my general nephrology clinic on the 15th of December. I thought she was looking well considering that she had been profoundly unwell with urinary sepsis in November of this year.

As a result of that inpatient stay, she has also been commenced upon intravenous iron and Erythropoietin Stimulating Agent to treat anaemia.

She was discharged on Sodium Bicarbonate 2gms TID and she has still been taking her Potassium Citrate 10mls daily as well. Her biochemistry today is fairly stable with an eGFR of 23, potassium of 4.9 and bicarbonate of 25. Her anaemia is a little better with haemoglobin rising to 96.

Reviewing previous results, it looks as though Patricia has not had her urinary calcium checked to see whether or not she has got hypocalcaemia. We will check this at the next clinic appointment as if that is present, I would prefer her not to be on Sodium Bicarbonate as this may increase her stone forming risk.

In the meantime given that her bicarbonate are so satisfactory I think we could certainly reduce the Sodium Bicarbonate dose from 2 to 1gm TID (with a possibility of stopping it altogether and continuing with the Potassium Citrate on its own in the future).

I will catch up again with Patricia in February of next year.

Yours sincerely

Dr Claire Nolan

Consultant Nephrologist and Physician

Date of Admission: 20/11/2025	Ward: .ML Ward 07
Mode of Admission: Emergency	Consultant: Dr James Millar (NEPHROLOGY-AG)
Admission Reason: Severe acidosis, AKI on CKD, infection, derranged LFTs,	
Discharge Date: 07/12/2025	Follow Up:

Diagnoses AKI on CKD sec to sepsis and obstruction
 Derranged LFTs
 Severe metabolic acidosis
 Anemia

Co-Morbidities CKD4
 Nephrocalcinosis
 Renal tubular acidosis
 IDA

Pharmacy Dispensary check only

Clinical Progress Dear Dr,

Patricia Hunt was admitted to UHM on 20/11/2025.

She presented following GP referral due to being generally unwell. Bloods showed AKI on CKD, severe acidosis, hypokalaemia, derranged LFTs

Hb low - EPO commenced. CTAP showed moderate bilateral hydronephrosis, with left ureter obstructing stone, and pyelonephritis of left kidney. She was taken for left ureteric stent insertion and received IV antibiotics for infection.

She is now medically fit for discharge with improving LFTs. She will receive a left rigid ureteroscopy, laser stone fragmentation and stent exchange in six to eight weeks as per urology. She will also receive nephrology follow up.

Thank you for your ongoing care,
 Kind regards,
 Cara Birse FY2
 UHM Ward 7

CHI Number: 1209823403

Speciality: **Gastroenterology**

It would appear from our records that one of the following applies:

- ✓ Your patient has not responded to our recent letters inviting them to arrange an appointment.
- Your patient has indicated that they no longer require an appointment.
- Your patient has refused two reasonable offers of appointment.

We therefore assume that your patient no longer needs this appointment. We have removed their name from the waiting list. This is in line with the NHS Greater Glasgow and Clyde's Did Not Attend Policy.

If you still wish your patient to be seen, we will require a new referral.

Yours sincerely

Dear Dr MacInnes,

Discharge Summary

Patient Name: Patricia Hunt
Patient date of birth: 12/09/1982
Patient Address: 22 Culmuir View, Croy, Glasgow, G65 9HH
Date of admission:
Date of discharge:

Diagnosis Left proximal ureteric stone
Renal tubular acidosis, nephrocalcinosis + CKD

Procedure Rigid cystoscopy and left ureteric stent insertion

This lady attended with weakness and slurred speech. She was found to have an acute and chronic kidney injury with significant electrolyte derangement. She was admitted under renal and had CT scans. She was found to have a left proximal 5mm ureteric stone. She was taken to theatre where she had a left ureteric stent inserted uneventfully. She was returned to the renal ward. She will be discharged home once well and will need a left rigid ureteroscopy, laser stone fragmentation and stent exchange in six to eight weeks TTG2.

Plan Left rigid ureteroscopy and laser stone fragmentation TTG2

Yours sincerely

Dear GP,

RE: Patricia Hunt
CHI: 1209823403

Patricia was referred to our service by the Primary Care Mental Health Liaison Nurse at Kilsyth Medical Practice on 1/10/25. I have met with Annette to discuss what our service can offer and have agreed the following:

Low Mood
Sleep Hygiene
Anxiety management
Signposting to recovery groups

I will be the allocated worker for Patricia and their involvement with the service, if you have any queries please don't hesitate to get in touch. I will forward a discharge summary when we have completed the action plan to update you on the outcomes achieved.

Your Faithfully,

Iain Reid
Mental Health & Wellbeing Worker

Dear Dr S Howard

Thank you for referring the above patient for colorectal investigation at high clinical priority. This referral has been triaged based on your patient's statistical risk of colorectal disease. From the qFIT and clinical information you have provided for this patient, their risk of serious colorectal disease is up to 20%. In keeping with NHSGGC guidance, they have been put on the waiting list for a category 1 colonoscopy. This means the investigation carries the highest priority and should be completed within 2-3 weeks.

We are working hard to reduce waiting lists for all patients. Your patient remains at high priority on the waiting list and if your patient was referred as USOC priority they will be tracked. If their clinical information changes, please submit an updated high priority referral indicating what has changed.

You may be receiving this letter as a result of a referral made within secondary care for colorectal investigation, please note your patient has been added to the waiting list as per above.

Regards,

Endoscopy Service GGC

CLINICAL INFORMATION**History of presenting complaint****Presenting complaint**

Description: IDA/positive Q-fit

Comment: Dear colleague,

I would be grateful for your timely consideration of scopes for this lady with longstanding IDA who has been recently found to have a qfit of 284.

Patricia is known to have IDA and this was thought to be related to her CKD and haematuria. She has some blood in her urine but tells me this is longstanding and her renal consultant is monitoring this. There was a plan for a colonoscopy in 2022 after she had a positive Q-fit but this never happened.

Patricia had an admission in July with microcytic anaemia and was given 1 unit PRCs. She was discharged with advice to monitor Hb but no plan for further investigations. I had referred to gastroenterology at this time but was advised to rerefer once I had the Q-fit.

Unfortunately there was a marked delay in Patricia handing in her Q-fit and this has now come back rather raised. She is aware of the possibility of underlying malignancy and why she is being seen.

Kind regards,
Stuart Howard
GPST3

Consultant: Dr Claire Nolan

Dear Dr MacInnes

Patient Name: Patricia Hunt
Patient date of birth: 12/09/1982
Patient Address: 22 Culmuir View, Croy, Glasgow, G65 9HH

Diagnosis

1. CKD G4 A3 (PCR 46 July 2025).
2. Nephrocalcinosis.
3. Non-steroidal anti-inflammatory overuse.
4. Hypocitraturia.
5. Renal tubular acidosis Type 1 – for genotyping at next clinic.
6. Anorexia.
7. Iron deficiency anaemia.

Actions from clinic

1. Updated bloods taken at clinic today.
2. Referral to Renal Anaemia Team for intravenous iron.
3. General nephrology follow-up 4 months.

It was lovely to see Mrs Hunt at my general nephrology clinic today. She had a recent inpatient stay with profound anaemia, with a haemoglobin of 61, and she was transfused 1 unit of packed red cells. She gave no symptoms of anaemia today, but did look pale. I have updated all her bloods at clinic today, presuming that she remains significantly anaemic.

I will refer her to our Renal Anaemia Team to start some regular intravenous iron infusions. If her haemoglobin has dropped significantly again then I will arrange an outpatient blood transfusion.

Her renal biochemistry has been a bit more stable since she stopped taking the regular non-steroidals. She does have significant CKD with an eGFR of 25 and creatinine clearance of only 19 – which might be more accurate given her extreme low body weight. I will await today's U&Es before making any changes to her potassium citrate mixture. I will plan to do some tubular genotyping when Patricia returns to the clinic next time.

Yours sincerely

Dr Claire Nolan

Diagnosis

1. Microcytic anaemia

Procedure:

Bloods

ECG

Co-Morbidities

1. CKD stage 4A1
2. Iron deficiency anaemia
3. OGD in 2021 showed erosive gastritis
4. Renal tubular acidosis
5. Anorexia
6. Hypocitraturia
7. NSAID over use
8. Nephrocalcinosis
9. Smoker

Discharge Medication:

Nil

Follow up:

With GP

This 42 year old lady presented to ambulatory care with worsening lethargy and shortness of breath. Over the past 2 weeks she has been unable to climb the stairs having to stop 3 times due to lethargy. Family have commented that she looks pale and that her oral intake has been reduced.

She was seen by the GP and bloods were taken 2 days ago. She denies any chest pain, she has a dry cough which is long standing and no haemoptysis. She denies any nausea or vomiting and eats a varied diet. Her last bowel movement was a brown stool with no blood and there has been no change in her bowel habit. She has no urinary symptoms. Her last menstrual period was 2 weeks ago which was not heavy with no clots. She has had some swelling and discomfort to the left calf which has now resolved.

On examination, she is thin and pale. Her weight is 45.5kg. Both calves were soft and non-tender. NEWS score is 1 with heart rate is 108. Her respiratory and abdominal examination were unremarkable and her heart sounds were pure.

Bloods show a haemoglobin of 61, an iron level of 2 and a ferritin of 4.6. ECG shows normal sinus rhythm and patient was transfused 1 unit of packed red cells and discharged home. GP to monitor haemoglobin.

Yours sincerely

CLINICAL INFORMATION**History of presenting complaint****Presenting complaint**

Description: IDA/increased heartburn

Comment: Dear Doctor,

I would be grateful for your assessment and consideration of urgent scopes for this lady with a significant IDA.

Patricia has a history of gastritis/duodenitis and previously became anaemic due to this. In addition it appears she was planned for a colonoscopy in 2022 for a positive Q-fit but she never arranged this.

Bloods were done last month due to new leg swelling and she was found to have Hb 69 and raised platelets. Patricia was admitted for assessment and had a transfusion. She feels a lot better following this but there doesn't appear to be a plan for further investigations. Her Hb is now at 73 but her platelets are still raised. I have started her on Iron.

Patricia denies weight loss, haematemesis, swallow issues or bowel change. She has noticed her heartburn has worsened over the last few months and had increased her PPI to compensate. She is unaware of any other blood loss and reports regular periods.

Of note she has CKD but the opinion of the renal team last month was this was unlikely the cause of her anemia.

Given her previous changes on her scope, significant IDA, raised platelets and increased gastric symptoms I would appreciate if you could arrange endoscopy +/- colonoscopy to look into the underlying cause.

Consultant: Dr Claire Nolan

Dear Dr MacInnes

Patient Name: Patricia Hunt
Patient date of birth: 12/09/1982
Patient Address: 22 Cuilmuir View, Croy, Glasgow, G65 9HH

Diagnoses

1. CKD G4 A1
2. Nephrocalcinosis
3. Non-steroidal anti-inflammatory overuse
4. Hypocitraturia
5. Renal tubular acidosis type 1
6. Anorexia
7. Iron deficiency anaemia

Actions from clinic

1. Patricia has not been taking potassium citrate, 10ml twice daily, as prescribed – Patricia advised to start immediately – potassium in October on lower side
2. Updated biochemistry – forms provided
3. Follow-up at General Nephrology Clinic 4-6 months

I saw Ms Hunt at the General Nephrology Clinic today. I noted she had blood tests done in October 2024, which showed low potassium and on enquiry she told me she has not been taking her potassium citrate 10ml twice daily, rather she has been taking this once daily. I have asked her to ensure she takes her potassium citrate at 10ml twice daily.

I have repeated her blood biochemistry in clinic today. Her urine dipstick showed her urine PH was 7.1. Her blood pressure in clinic was 114/74, weight 38.6kg and systemic examination was unremarkable. I will review her again in 4-6 months' time. If any medications require to be changed I will let you know once I have reviewed her clinic blood results from today.

Yours sincerely

Dr Azhar Khan

2. Nephrocalcinosis
3. Non-steroidal anti-inflammatory overuse
4. Hypocitraturia
5. Renal tubular acidosis type 1
6. Anorexia
7. Iron deficiency anaemia

Actions from clinic

1. Updated biochemistry
2. Continue with increased dose of potassium citrate, 10ml twice daily
3. Follow-up at General Nephrology Clinic 6 months

It was lovely to meet with Ms Hunt at my General Nephrology Clinic today. She had some blood tests in August of this year, which showed a dip in her potassium to 2.9. Her potassium citrate mixture was increased to 10ml twice daily, and most recent bloods in September show potassium of 4.8 and eGFR of 30.

Blood pressure readings at your practice are satisfactory.

I have updated all the bloods again today and assuming stability will catch up with Patricia in 6 months' time.

Many thanks.

Yours sincerely

Dr Claire Nolan

Dear Dr MacInnes

Patient Name: Patricia Hunt
Patient date of birth: 12/09/1982
Patient Address: 22 Cuilmuir View, Croy, Glasgow, G65 9HH

Diagnosis

1. CKD4
2. Nephrocalcinosis
3. Non-steroidal anti-inflammatory overuse
4. Hypocitraturia
5. Renal tubular acidosis
6. Anorexia
7. Iron deficiency anaemia

It was lovely to meet with Ms Hunt at my General Nephrology Clinic today. Since January she has been taking her Potassium Citrate 10mls once daily and I can see that most recent biochemistry is good with potassium in the reference range and eGFR improved to 29.

Blood pressure was excellent at 117/76 and weight has increased to 42.4kgs which is also good.

I've updated haematology at clinic today along with iron stores. Patricia was given an infusion of intravenous iron in January and hopefully her haemoglobin has incremented. In January of this year her random glucose had increased to 13.9 so I have also repeated this today along with a HbA1c and I will put the results at the bottom of this letter.

I will catch up with Patricia in 6 months' time. She should continue on the same dose of Potassium Citrate. I have also given her a blood form to have her U&Es checked in 3 months as well. If she feels at all unwell (and she is aware of the symptoms of when she is dehydrated from previous admissions) then she will not wait until the next clinic appointment but will be in touch with either myself or your practice.

Thanks again.

Yours sincerely

Dear Dr MacInnes,

Discharge Summary

Patient Name: Patricia Hunt
Patient date of birth: 12/09/1982
Patient Address: 22 Cuilmuir View, Croy, Glasgow, G65 9HH
Date of admission: 06/02/2024
Date of discharge:

Please make reference to the discharge summary completed on the 25th of January 2024.

Mrs Hunt was asked to return to the Ambulatory Care unit after discharge on the 25th of January. Her first return visit was on the 30/01/24. Her U&Es were repeated and her potassium was 5.8. Mrs Hunt blood results were discussed with Dr Nolan and she recommended that Patricia stopped her potassium drinks for three days and then to resume these once daily for four days prior to returning to Ambulatory Care.

On the 06/02/24 Mrs Hunt returned the Ambulatory Care again for repeat U&Es. Her bloods were discussed with Dr Nolan who has advised that the patient should continue to take potassium drinks once daily until follow up at Dr Nolan's clinic in March.

Yours sincerely

Dear Patricia Hunt

Patient Name: Patricia Hunt
Patient date of birth: 12/09/1982
Patient Address: 22 Cuilmuir View, Croy, Glasgow, G65 9HH

We had you booked in for a follow up appointment with Gastroenterology on the 26th of January 2024 but unfortunately you did not attend. I hope you are well. I can see that you have recently been in hospital with problems with your kidneys. The last time I had seen you we had discussed carrying out a colonoscopy given your positive bowel screening test and your weight loss. I know you hadn't been keen to pursue this at the time, I won't send you out a further routine appointment, however if you would like to be seen please get in contact with the department to reschedule. We would be happy to see you back in future.

Yours sincerely

Dear Patricia Hunt

Patient Name: Patricia Hunt
Patient date of birth: 12/09/1982
Patient Address: 22 Cuilmuir View, Croy, Glasgow, G65 9HH

It was lovely to catch up with you at my general kidney clinic today. You had been feeling pretty well since your hospital admission in December. You are drinking a good volume of fluid during the day, and your current medicines include Esomeprazole, Mirtazapine, vitamin D and potassium citrate 10ml twice daily.

Your blood pressure was excellent today at 127/76. We have updated your kidney blood tests from clinic today and the results will be mentioned at the bottom of this letter. Assuming that everything remains stable, we will catch up in 2 months' time. If your potassium level from today's clinic is in the normal range, then we will carry on with your current dose of potassium citrate.

Best wishes.

Yours sincerely

Dr Claire Nolan

Co-Morbidities	CKD/nephrocalcinosis Type 1 - renal tubular acidosis Recurrent UTIs Chronic iron deficiency anaemia Emphysema Depression Gastritis Eating disorder Drug addiction
Investigations	US kidneys 13/12/23: nephrocalcinosis noted
Clinical Progress	Dear doctor, Ms Hunt attended UHM on 13/12/23 for a clinic appointment with Dr Nolan following a recent episode of hypercalcaemia. On this visit she was found to have reduced kidney function (with eGFR 7, Cr 606). Other than reduced appetite for 2 days, Ms Hunt denied any other symptoms preceding admission. She was admitted and treated for AOCKD with hypercalcaemia - managed with IV fluids and colecalciferol withheld. She developed hypokalaemia as an inpatient, now resolved. She had clinically improved renal function (Cr back to baseline - 159) and was normocalcaemic (Ca2+ 2.31) on discharge. Ms Hunt will have an OP appointment on 20/12/23 in Ambulatory Care for review and repeat bloods. She has been commenced on a lower dose of colecalciferol to continue and new ferrous fumarate. Thank you for your ongoing care. Best wishes, UHM Renal

Patient date of birth: 12/09/1982
PatientAddress: 22 Cuilmuir View, Croy, Glasgow, G65 9HH

It was lovely to catch up with you at my kidney clinic today. We met when you were recently an in-patient in University Hospital Monklands with some vomiting symptoms and a deterioration in your kidney function.

I was delighted to see that your most recent kidney function in November this year has improved from 21% to 39%. Your potassium level is at the upper end of normal and your bicarbonate levels are also normal.

I have repeated all your blood tests today and the results will be at the bottom of this letter. I am anticipating that things will remain stable, and if so I will catch up with you at this clinic in 4 months' time.

Best wishes.

Yours sincerely

Dr Claire Nolan

PS: There has been a change in the kidney blood tests – function has dipped to 19% again. Also, your Calcium level is a bit high and this can affect kidney function. PLEASE STOP your vitamin D tablet called cholecalciferol.

ALSO, we need to repeat your blood tests and probably give you a drip of fluids to rehydrate you. I can arrange this as a day patient in the ambulatory care unit, rather than admitting you to hospital - I will be in touch. CN

Clinical Progress

Dear Doctor,

Patricia Hunt was admitted on 26/10/23 with a 5 day history of nausea and vomiting. She was found to have an AKI and severe hypokalaemia. She was treated with IV fluids and potassium replacement.

She was also reviewed by substance misuse for recent addiction to neurofen. They will refer to rapid access on discharge for ORT. In the meantime they have asked for her to be prescribed dihydrocodeine 30mg PRN.

She improved as an inpatient and is now fit for discharge. She is to return to ambulatory care for repeat U&Es on Thursday 2/11/23.

Many thanks for your ongoing care of the patient.

Follow-up Ambulatory care for repeat U&Es on Thursday 2/11/23

Medication Changes Started dihydrocodeine 30mg PRN as per substance misuse team

Good morning

I had a telephone call from P Hunt yesterday evening about a medicine we started her on.

Her folate level was 3.6 on 5/6/23 so when she was seen at outpatient clinic on 16/6/23 we arranged 2 weeks supply of folic acid 5mg/day tablets from our hospital pharmacy. We asked Patricia to hand the outpatient recommendation into the practice. I'm not sure what she handed in, but it seems that she isn't getting an ongoing supply.

Could you please continue with folic acid 5mg/day tablets until a 3-month course is complete.

Many thanks

Karen Dingwall

Dear Dr MacInnes

PatientName: Patricia Hunt
Patient date of birth: 12/09/1982
PatientAddress: 22 Cùlmuir View, Croy, Glasgow, G65 9HH

It was lovely to meet with Miss Patricia Hunt at my general nephrology clinic today. Patricia is a 40-year-old lady with non-proteinuric CKD3 and hypocitraturia with previous biochemistry consistent with renal tubular acidosis type 1.

She has been managing to take her Potassium Citrate twice daily, when she initially took it 3 times daily she had significant heartburn, but has been fine on the reduced dose. She has had no frank haematuria or symptoms of a urinary tract infection.

I have repeated all her bloods again today including her renal biochemistry, full blood count, haematinics and also a random glucose and HbA1c, as I noted that a random glucose in November was slightly high at 10.1. Any significant results will be at the bottom of this letter. If Patricia has ongoing iron deficiency anaemia, then I will arrange for her to have some intravenous iron, as she has previously not been able to tolerate oral iron supplements.

Thanks again

Yours sincerely

Dr Claire Nolan
Consultant Nephrologist and Physician

Dear Ms Hunt

Patient Name: Patricia Hunt
Patient date of birth: 12/09/1982
Patient Address: 22 Cuilmuir View, Croy, Glasgow, G65 9HH

Your blood tests from your kidney clinic appointment on 5 June show that you are more anaemic than usual. In addition, your iron stores remain very low. I have asked my colleagues in the renal anaemia team to urgently arrange an iron infusion, however I would be grateful if you would let me know if you have any symptoms of breathlessness, chest tightness or dizziness. Your blood count is low enough where we might consider a blood transfusion.

In addition, I wonder if your GP might be able to arrange to check your full blood count in a week's time just to make that it has not fallen any further.

Thanks for your help.

Yours sincerely

Dr Claire Nolan
Consultant Nephrologist and Physician

Dear Colleagues

Patient Name: Patricia Hunt
Patient date of birth: 12/09/1982
Patient Address: 22 Cuilmuir View, Croy, Glasgow, G65 9HH

I would be very grateful for your urgent intervention with Mrs Patricia Hunt. She is a young woman who attends my General Nephrology Clinic with probable type 1 renal tubular acidosis and hypocitraturia. She has had long-standing iron deficiency anaemia but has previously and repeatedly failed to tolerate oral iron supplements. Her most recent parameters at my General Nephrology Clinic show is more anaemic with haemoglobin of around 60 and low iron stores.

I would be very grateful if you would be able to urgently arrange some intravenous iron as an out-patient with repeat full blood count taken at the same time.

Thanks very much for your help.

Yours sincerely

PMHx: Fe anaemia, gastritis, acute renal failure

Ms Hunt attended Kilsyth Health Centre on the 9th November 2022 and her weight was recorded as 46.8kg (BMI: 18.1kg/m²) and so has been relatively stable in the last 3 months.

She reports that she has had a cold/virus for the last 2 weeks and migraine for a week so reduced appetite and not finishing meals recently. She also mentioned that she stopped taking the Ferrous Fumarate as this upset her stomach, but did confirm that she may be due for an iron infusion later this month.

She continues to smoke 20 cigarettes per day, but stated that she was on patches during her inpatient admission and is keen to stop, so sign-posted to the smoking cessation services.

No regular eating patterns reported and frequently misses lunch. Also estimated fluid intake of approximately 6,000mls per day, which is 370% of her estimated minimum fluid requirements. Ms Hunt is aware that excess fluid and smoking will be having a significant impact on her appetite.

As there is scope to improve her dietary intake, I reinforced the importance of regular eating patterns for general health, mood and energy levels. I also recommended that she aim for a maximum of 3 litres of fluid per day and include nourishing options, such as full cream milk, fruit juice or smoothies - instead of water. Also to avoid caffeine drinks around mealtimes to aid iron absorption.

A review appointment has been arranged for the 11th January 2023. If you wish any further information, please do not hesitate to contact me.

Yours sincerely

Karen Martin

PMHx: Iron deficiency anaemia, gastritis and acute renal failure

Ms Hunt attended Kilsyth Health Centre on 09/11/2022 and her weight was recorded as 46.8kg (BMI:18.1 kg/m²) so weight stable in the last 3 months since discharge from hospital.

She mentioned having cold/virus 2 weeks ago and migraine for last 5 days and so reduced appetite/smaller portions.

No recent changes to medications reported, but she did state that she had stopped taking Ferrous Fumarate as upset stomach, but may be scheduled for an Iron infusion at the end of this month, together with up-to-date bloods. I also note that a scope has been recommended as QFit > 400, but Ms Hunt is not keen to schedule until renal investigations complete.

Bowels are regular – opening 1-2/d. Still smoking 20/d but had been on patches as IP and keen to stop, so sign-posted to Smoking Cessation services.

From diet history, regular breakfast and dinner, but often misses lunch and only occasional extras/snacks/puddings. However, excessive fluid intake as estimated intake 5.5L - > 6.5L/d (Coffee: 3-4/d, Tea - 2-3/d, FCM - 2-3 pints/d + water - 3L/d), which is 340% of estimated minimum requirements.

As there is scope to improve dietary intake – I reinforced nourishing food and fluid options, including fortification, together with the importance of regular eating patterns for general health/mood and energy levels, with written information provided.

2/2

Plan:

1. Aim 3 regular meals per day, with food fortification when able
2. Encouraged with daily pudding
3. Encouraged with regular snacks between meals
4. Limit fluid intake to max 3L/d - fluids after food to minimise impact on satiety (and avoid caffeine drinks at mealtimes to aid Iron absorption)
5. Investigate Smoking cessation support

A review appointment has been arranged for 11/01/2023, to offer further support.

Yours sincerely

Karen Martin

Consultant:

Dear Dr MacInnes,

Patient Name: Patricia Hunt
Patient date of birth: 12/09/1982
Patient Address: 22 Cuilmuir View, Croy, Glasgow, G65 9HH

Diagnosis:
 28/11/2022 (CKD) Chronic kidney disease - stage G3b A1
 28/11/2022 Hypocitratemia

Primary Renal Diagnosis: Not yet coded

I saw Miss Hunt at Dr Nolan's general nephrology clinic today. She is a 40-year-old lady with presumed distal renal tubular acidosis type 1. Since her last review in clinic, at the end of October, her urine citrate result over 24 hours has come back showing her urine citrate is less than 0.1 and the urine citrate creatinine ratio cannot be calculated because it is below the lower limit of detection. This confirms the suspected diagnosis.

On examination today, her weight is down to 47.6kgs but she states that she has been eating normally other than having a few days a few weeks ago when she did not eat because she had a cold. She states she is drinking plenty of water, at least 3 litres a day and her renal function is pretty stable since her last clinic attendance. Her urine dip once again is positive for nitrites and leucocytes but she is a-symptomatic of UTI. I have sent off a urine culture today.

As per Dr Nolan's previous comment in August 2022, the plan is now to move her from sodium bicarbonate onto potassium citrate. I discussed this with Alison, our renal pharmacist, who advised that the newer preparations are not yet licenced and so as agreed with Dr Skamperdoni we should start her on citric acid with potassium citrate which is 10mls 3 times a day to replace her sodium bicarbonate. I would appreciate if this could be changed in practice as these discussions were had after the patient had left the clinic. She will receive an appointment for 2 months' time and she has been given a blood form including a glucose, as her random glucose was raised at 10.1. She has been given worsening advice regarding urinary tract infection and is aware to present if she develops worsening symptoms.

Action for GP; Please change Sodium Bicarbonate (Stop) to Citric Acid with potassium citrate 10 mls 3x a day, diluted well with water as per the BNF.

Yours sincerely

Dr Rosa McMillan
 IMT1

Consultant: Dr Claire Nolan

Dear Dr MacInnes

Patient Name: Patricia Hunt
Patient date of birth: 12/09/1982
Patient Address: 22 Cuilmuir View, Croy, Glasgow, G65 9HH

I met with Mrs Hunt at my general nephrology clinic today. She is a 40-year-old lady with nephrocalcinosis, presumed distal type I tubular acidosis +/- Hypocitraturia - the 24 hour urine citrate result is still outstanding. Miss Hunt has handed in an early morning urine sample for pH sampling. Her PH was 6 ie she was not able to maximally acidify her urine, which again suggests a renal tubular acidosis. Miss Hunt has been well since I last met with her at clinic. She is managing her Sodium Bicarbonate tablets with most recent biochemistry showing both potassium and bicarbonate sitting in a satisfactory range. However, her urea and creatinine had increased suggest that she is more intravascular deplete. She tells me she is drinking up to 3 litres of fluid per day.

Urine dip today showed some non-visible haematuria, a small amount of proteinuria and was positive for nitrates and leucocytes. Although the urine looks slightly cloudy, Miss Hunt had no symptoms of urinary tract infection. Given the change in biochemistry I have sent an MSSU sample to the lab for microbiology and I have repeated U&E's again urgently today. If there has been further deterioration, I will be in touch with Mr Hunt for probably antibiotics course and possible intravenous fluids. If biochemistry is stable or improved today, then I will meet with Miss Hunt back at clinic on 24.11.22.

Thank you.

Yours sincerely

Dr Claire Nolan

Diagnosis

1. Iron deficiency anaemia.
 - Previously admitted with a haemoglobin of 39 (MCV 61.8).
 - Normal D2 biopsies.
 - qFIT > 400 – missed scheduled outpatient colonoscopy.
 - Upper endoscopy done at the time of admission.
2. Nephrocalcinosis and possible distal renal tubular acidosis.
 - Most recent creatinine 169 (eGFR 32).

Many thanks for coming up to the clinic for your gastroenterology appointment. I am pleased to see that you are looking bit better than when I had last seen you and that you had managed to put on some weight – your weight at your initial clinic appointment was 36.3kg, and you were 48.5kg at clinic today.

We discussed the results of your recent blood tests which have shown that your iron levels were again on the low side – your blood counts had normalised in June of this year (haemoglobin 126) but now has fallen again to 91. This seems to be due to underlying low levels of iron – I will book you into the Planned Investigation Unit for an iron infusion to try and replenish this. I can see this has been rescheduled for November.

Given your raised qFIT (>400) we would strongly recommend carrying out some form of lower gastrointestinal investigation – a colonoscopy would be first choice. You have missed appointments for a couple of these and I think you are anxious about getting this done. You are feeling worried about your kidneys and wanted to focus on this at the moment. We spoke about some of the other potential options including a virtual colonoscopy, capsule colonoscopy and the benefits of just going for a regular colonoscopy in the first instance (this allows us to get samples at the time of the procedure) – you are going to have a think about this. We will liaise with the renal team to try ensure it doesn't have any negative impact on your kidneys. Please will you give us a ring if you want to go through with the test and we can arrange this for you.

I will book you in for a return appointment.

2/2
Yours sincerely

Dear Dr McGregor,

Work Capability Assessment Outcome Notification

**RE: Miss. Patricia Hunt, DOB 12 September 1982, 22 Cuilmuir View, Croy, Kilsyth
Glasgow G65 9HH**

This patient has been claiming Employment and Support Allowance. We recently assessed their ability to work using the Work Capability Assessment.

WCA Effective Date 7 August 2022

Customers with potential capability for work enter the Work-Related Activity group, whilst those who have limited or no capability for work related activity enter the support group

This patient meets, or is treated as meeting the eligibility criteria for Employment and Support Allowance [Work related activity group/Support group].

You no longer need to issue an NHS medical certificates for this person's claim to benefit. However we may need to contact you for further information about this person's illness or disability in the future.

Proof of illness or disability may still be required for other interest groups or organisations such as employers or insurance companies. The provision of this information is not usually a NHS requirement.

If your patient makes another claim for benefit in the future, we will require medical certificates from the date of illness or disability.

Consultant: Dr Claire Nolan

Dear Dr,

Patient Name: Patricia Hunt
Patient date of birth: 12/09/1982
Patient Address: 22 Cuihmuir View, Croy, Glasgow, G65 9HH

I met with Miss Hunt at my general nephrology clinic today, the 25th of August. Ms Hunt is a 39-year-old lady who has nephrocalcinosis and may possibly have distal renal tubular acidosis.

I met with her when she was an inpatient in Monklands recently, with acute kidney injury, hypokalaemia and low bicarbonate. The overall picture was that of a mixed metabolic acidosis, however I note that her urinary anion gap at that time was positive. She had further investigations and a 24-hour urinary collection for calcium, phosphate and oxalate were all normal. Her 24-hour collection for citrate is outstanding and it will be interesting to see if this demonstrates high hypocitraturia. Cortisol, serum ACE, and myeloma screen were all negative, as were GN screen including ENA's.

Miss Hunt weighs 51.4kgs and an eating disorder would come into the differential diagnosis here. I chatted to Miss Hunt about this today and she admitted that in the past she has had eating disorder though feels things are better in that regard at present. Regardless, I think she should continue her sodium bicarbonate capsules at present at 1 gram bd, as this appears to be keeping her potassium and bicarbonate satisfactory for the time being.

I will catch up with Miss Hunt fairly soon, if, as expected, she also has hypocitraturia there will be dietary advice to impart and possibly a change of sodium bicarbonate to potassium citrate instead.

I wonder if the practice might be able to help with an early morning urine pH reading. If this can't be done at the practice (and the result forwarded to me) then I will arrange for it to be done at Monklands hospital.

Thanks for your help.

Yours sincerely

Dr Claire Nolan
Consultant Nephrologist and Physician

Dear Patricia Hunt

Patient Name: Patricia Hunt
Patient date of birth: 12/09/1982
Patient Address: 22 Cuilmuir View, Croy, Glasgow, G65 9HH

Your GP had recently got in contact with us towards the end of June to enquire whether you were still on the waiting list for a colonoscopy. You had been re-added to the waiting list but I have recently received correspondence from the endoscopy department to say that you had not been in contact to make an appointment and you have subsequently been removed from the waiting list again.

I can see that you have had a couple of recent admissions to hospital and I wonder if this may be the reason why you didn't get in touch with the endoscopy department to schedule the appointment.

If you want me to re-request it, please will you get in contact with the department so this can be arranged. Our number is 01698 742 432. If you are very anxious about the test and would want to discuss alternatives, please let us know and we can schedule you for an urgent appointment where we can discuss this with you in more detail.

Yours sincerely

Dr Adam Wimpres

Consultant: Rachel Hunt

Dear Colleague,

Patient Name: Patricia Hunt
Patient date of birth: 12/09/1982
Patient Address: 22 Culmuir View, Croy, Glasgow, G65 9HH

Please accept the transfer of care for above patient who was recently seen in Dietetic outpatient general clinic in University Hospital Monklands on 4/8/22. Patient was initially referred as an inpatient, however discharged before being seen. Referred for low weight.

Current weight = 47.4 Kgs (on 4/8/2022)
BMI = 18.2 Kg/m²
Weight = 48.6 kgs (Feb 2020)
Weight on referral = 41.8 kgs (18 July 2022) however query this weight as likely inaccurate.

Patient has a past medical history of Iron deficiency anaemia, gastritis. On Iron, Folic Acid, Ferrous Fumarate, Calcichew and Esomeprazole.

The patient's current dietary intake is two meals daily, occasionally three, however often skips evening meal or takes a very small portion. Includes snacks and glasses of full fat milk daily. Patient is in calorie deficit due to skipping evening meal.

Plan

1. Patient was given food fortification advice and provided with nourishing diet NDR leaflet.
2. Encouraged to increase high calorie and high protein sources.
3. Advised to leave 30 minutes after taking caffeine drinks to help with absorption of Iron at meal times.
4. Encouraged patient to increase Iron sources.

Patient is for Community follow up. (Aiming to discharge on next review if weight stable).

Please do not hesitate to contact me regarding patient on 01698 752010.

Yours sincerely

Rachel Hunt
Dietitian

Dear Ms Hunt

Your Reference: CHI Number 1209823403

You were referred to the Endoscopy Unit with symptoms thought to be coming from your stomach/bowel.

We wrote to you recently inviting you to contact us to make an appointment to attend the Endoscopy Unit, unfortunately you have not responded to our communication to you and you have been subsequently been removed from the Endoscopy waiting list.

We have copied this letter to both your General Practitioner and your Hospital Consultant. If you have any ongoing concerns you should discuss this with your General Practitioner.

Yours sincerely
Elizabeth Dolan

New Condition
Urgent Internal

Consultant: Dr Raheel Syeed

Dear Renal Medicine

Patient Name: Patricia Hunt
Patient date of birth: 12/09/1982
Patient Address: 22 Cuilmuir View, Croy, Glasgow, G65 9HH

- Diagnosis:**
1. Recurrent episodes of acute kidney injury
 2. Ultrasound scan in February suggested nephrocalcinosis but CT scan in February suggests no abnormality.
 3. Microalbuminuria
 4. Recurrent urinary tract infections
 5. Iron deficiency anaemia – under gastroenterologists
 6. Positive antinuclear antibody and anti-ENA antibodies
 7. qFIT positive

I would be grateful for your advice on whether you would suggest any further investigations or whether you would consider seeing Patricia Hunt earlier in clinic. This is a lady referred to you, I believe in March 2022 by the gastroenterologists. She had an admission in June 2022 following an episode of vomiting where she developed hyperkalaemia and AKI.

During this admission she was given intravenous fluids and her renal function returned back to normal. The day after discharge her renal function was still completely normal. However, her GP has been monitoring her renal function, which has again deteriorated and her eGFR has dropped to 40, urea of 10.8 and potassium of 3.2.

Unfortunately, her GP has not passed on any further information about whether the patient. I note there has been a further positive urine specimen from 7th July with an e-coli and on 16th June she had an e-coli UTI.

The patient is from Kilsyth.

In view of the previous imaging, I wonder whether the patient needs to be seen urgently by yourselves or does she need any further imaging.

Of interest, I believe she may have had Trimethoprim as treatment just prior to her last admission.

Yours sincerely

Raheel Syeed
Consultant Physician (General & Respiratory Medicine)

Date of Admission: 17/06/2022

Ward: ML Ward 17

Mode of Admission:

Consultant: Dr Raheel Syed (RESPIRATORY MED-AQ)

Admission Reason:

Discharge Date: 21/06/2022

Follow Up:

Diagnoses AKI and hypokalaemia

Clinical Progress this lady was admitted with an acute kidney injury secondary to vomiting. She was also hypokalaemic. she has been treated with IV fluids and potassium replacement and has no clinically improved and is fit for discharge. She has previously been referred to renal and is on their outpatient worklist, as she has a previous AKI and has positive ANA and ENA antibodies. She has a history of iron deficiency anaemia on a positive Q fit, and has not attended for colonoscopy when arranged. We will refer her back to gastroenterology for further investigation. We would be grateful if U+E's could be checked in 2 weeks to ensure renal function stable off IV fluids.

Follow-up Gastro o/p referral
 U+E's in 2 weeks please

Dear Miss Hunt

Patient Name: Patricia Hunt
Patient date of birth: 12/09/1982
Patient Address: 22 Cuilmuir View, Croy, Glasgow, G65 9HH

We had you booked in for another appointment at the beginning of March, and this was to discuss investigations in a bit more detail. You had previously not responded to invites from the endoscopy unit inviting you to go for a colonoscopy. This was in the context of having a very low blood count and a positive qFIT test > 400. This is a test similar to bowel screening and can suggest there is something serious going on such as bowel cancer.

It sounded as if you were happy to go for the colonoscopy when I spoke to you at clinic, however, if you were wanting to explore alternative investigations please get in contact with the department and we could book you in for an urgent appointment.

Yours sincerely

Dr Adam Wimpres

Dear Dr Veryan

Patient Name: Patricia Hunt
Patient date of birth: 12/09/1982
Patient Address: 22 Cuilmuir View, Croy, Glasgow, G65 9HH

Thank you for your referral with regards to this lady. I see that she had a recent renal ultrasound that showed increased echogenicity in the calluses which is suggestive of nephrocalcinosis. Interestingly, her immunology screen was done and she is positive with ANA 1-160 speckled and positive La antibody level which could be associated with sjogren's syndrome. Her serum bicarbonate level has also been on the low side previously at between 15 to 17 albeit it was normal in February this year. I have appointed this lady a routine new patient appointment but in the meantime please let us know if there is any deterioration to her renal function, it might be useful to have her urine dipstick to see what her urinary PH is.

Many thanks for your referral and I look forward to seeing this lady in clinic.

Kind regards.

Yours sincerely

Dr Wan Wong

Dear Ms Hunt

Patient Name: Patricia Hunt
Patient date of birth: 12/09/1982
Patient Address: 22 Cuilmuir View, Croy, Glasgow, G65 9HH

Thank you for arranging to have your blood tests done on the 9th February. Some of these were more specialist tests so the results have taken a bit of time to come through.

Your kidney blood tests are improving, though one of the kidney blood tests (creatinine) remains higher than we would expect for someone of your age, and the urine sample showed that there is some protein leaking from your kidneys. Your kidney ultrasound scan showed some new changes which were not present when your kidneys were last scanned in 2013. I've therefore asked the kidney specialists to arrange to see you. To try to keep your kidneys working as well as possible, you should drink at least 2 litres of water a day.

Your blood count (haemoglobin) is improving having started taking the iron and folic acid tablets - you should continue taking these for now.

Your recent CT scan showed some changes in your lungs called emphysema. If you smoke, it's very important you stop to reduce the risk of the emphysema resulting in symptoms with time. You can access help with stopping smoking online and in most local pharmacies.

It is still very important that you have the telescope examination of your bowel (colonoscopy) - Dr Wimpress will discuss this with you when you come back to his clinic next month. If you have any questions in the interim, please don't hesitate to get in touch via my secretary.

Yours sincerely

New Condition Urgent Internal

Dear Colleagues

Patient Name: Patricia Hunt
Patient date of birth: 12/09/1982
Patient Address: 22 Cuilmuir View, Croy, Glasgow, G65 9HH

I would be grateful if you would consider seeing this 39-year-old lady in clinic. She was seen in Adam Wimpres' Gastroenterology clinic in December 2021 having been referred with recurrent iron deficiency anemia, upper abdominal pain and unintentional weight loss.

Bloods checked in clinic in December 2021 showed abnormal renal function (urea 15.6, creatinine 121, bicarbonate 16, K+ 3 and eGFR 49). Her anaemia was noted to be improving with haematinic replacement, and a previously identified thrombocytosis had resolved. She was not taking any nephrotoxic medicines at that stage. The last time her kidney blood tests were checked prior to this was November 2019 in which stage they were normal (urea 6.6, creatinine 71 and eGFR >59).

A contrast enhanced CT scan of her chest, abdominal and pelvis last month showed no cause for the unintentional weight loss or iron deficiency anemia. The was an incidental finding of emphysema.

A colonoscopy and dietetic review were planned, but she did not attend the appointments.

Her kidney blood tests were repeated on the 24th January 2022 (GGC portal) showing some improvement (urea 5.2, creatinine 105 and eGFR 51), and a further improvement when checked again on the 9th February 2022 (NHSL Portal) - urea 5.4, creatinine 96, eGFR >59 (sodium and bicarbonate normal; K+ 5.1 without replacement). Her immunoglobulins are normal and serum protein electrophoresis (GGC Portal) showed no evidence of a paraprotein.

I understand she has microscopic haematuria and her urine microalbumin/creatinine ratio is elevated (15.4 mg/mmol of creatinine). ANCA and Anti-GBM antibodies are negative and ANA is positive (1/160 Speckled). Her ESR is normal.

A renal ultrasound scan showed her right kidney to be smaller than her left (9.5cm and 11.5cm respectively). There were cysts in both kidneys and increased echogenicity in the calyces which the reporting Sonographer has suggested may suggest nephrocalcinosis. It was noted also in the report that there has been a significant change in the renal appearances since her previous ultrasound scan in 2013. There was no evidence of renal obstruction or a renal mass lesion. Her adjusted calcium is normal.

Given she has not attended for dietetic review or the planned colonoscopy it has been arranged for her to come back to Dr Wimpres' gastroenterology clinic in early March for further review and to explore the reasons for her non-attendance. We plan to check her HIV, HBV and HCV serology at this appointment also.

In light of the renal findings, I'd appreciated your thoughts. If you need any further information, please just let me know.

With best wishes,

Yours sincerely

Dear Ms Hunt

Patient Name: Patricia Hunt
Patient date of birth: 12/09/1982
Patient Address: 22 Cuilmuir View, Croy, Glasgow, G65 9HH

I contacted our endoscopy booking team today to see if I could expedite your colonoscopy. They informed me the reason you have not yet been appointed for this test is because you have not responded to invites sent to you to book an appointment. I understand from dietetic colleagues that you missed a scheduled appointment with them also.

It is very difficult to get to the bottom of your symptoms and abnormal blood test results if you do not attend for the agreed tests.

I note your CT scan is booked for the 11th February. It's extremely important you attend this appointment, and also that you make an appointment at the Phlebotomy clinic so the additional blood tests I wrote to you about a couple of weeks ago can be done. *Please phone my secretary on the telephone number noted above the day the blood tests are done so it can be arranged for the results to be reviewed.*

If you have any questions or concerns about the planned tests, please get in touch via my secretary so either myself or Dr Wimpres can arrange a time to run through these with you.

Yours sincerely

Dr Jennifer Vryan

Dear Adam

Patient Name: Patricia Hunt
Patient date of birth: 12/09/1982
Patient Address: 22 Cuilmuir View, Croy, Glasgow, G65 9HH

You asked me to review this lady's blood results whilst you were on leave. I phoned her today as the bloods had not yet been done. She confirmed that she has received your recent letter and the blood request forms along with the contact details for the Phlebotomy clinic at the David Mathews Centre. I have encouraged her to make an appointment to have the bloods done as soon as possible, and also asked that she contacts the GI secretaries the day the blood tests are done so it can be arranged for the results to be reviewed.

Yours sincerely

Dear Ms Hunt

Patient Name: Patricia Hunt
Patient date of birth: 12/09/1982
Patient Address: 22 Cuilmuir View, Croy, Glasgow, G65 9HH

Thank you for arranging to have your blood tests done on Monday. The blood tests were analysed at Glasgow Royal Infirmary rather than University Hospital Monklands so we have only now been able to access the results. Your kidneys remain upset, and both your blood count (haemoglobin) and blood protein level (albumin) remain low also. *You are deficient in a vitamin called folate - I have copied this letter to your GP to ask for their help in prescribing a three month course of Folic Acid tablets. I'd be grateful if you could make arrangements to collect the prescription.* It's important you take these daily for at least the next three months. This will hopefully help improve your blood count.

Given your kidneys remain upset, I have asked that you are sent an urgent appointment to come for an ultrasound scan of your kidneys, and have also enclosed a couple of further request forms - one for further blood tests, and the second to allow you to provide a urine sample to look for evidence of protein in your urine. Please note on the urine sample request form the date and time you collect the urine sample - the completed urine sample can be handed in to your GP surgery or directly to the lab reception at University Hospital Monkland.

You can make arrangements to have the further blood tests done at either via your GP surgery or via the Phlebotomy clinic at the David Matthews Centre, the contact details for which are enclosed. *Please contact my secretary by telephone the day the blood tests are done so it can be arranged for the results to be reviewed.*

You were booked to see the dietician last week, but I note you did not attend the appointment. It is important that you are assessed by dietetic colleagues given your recent unintentional weight loss - if you would like to be re-referred, please let my secretary know.

I have also asked that the appointments for the planned CT scan and colonoscopy are expedited as much as possible.

If you have any questions regarding the above, please don't hesitate to get in touch via my secretary.

Yours sincerely

Dear Patricia Hunt

Patient Name: Patricia Hunt
Patient date of birth: 12/09/1982
Patient Address: 22 Cuilmuir View, Croy, Glasgow, G65 9HH

I am a little confused regarding your colonoscopy test as you informed my secretary that you did have a colonoscopy on the 11th of August although we have no documented record of this. The only endoscopic procedure I have the results of is your upper GI endoscopy in April 2021. Our nurse endoscopist has checked our records and has been in touch to say your details were not in the theatre books and that you did not attend for a Covid swab on the 9th either. Your previous stool tests checking for blood in the stool was positive. I will ask my secretary to book you in for an urgent clinic appointment so that we can discuss this further and take the necessary action thereafter.

Yours sincerely

Consultant: Doctor Jen Veryan

Dear Patricia Hunt

Patient Name: Patricia Hunt
Patient date of birth: 12/09/1982
Patient Address: 22 Cuilmuir View, Croy, Glasgow, G65 9HH

Problem:

1. Recurrent iron deficiency anaemia
 - a. haemoglobin of 39 with an MCV of 61.8 and ferritin of 2.9 in 2019
 - b. most recent haemoglobin 85
 - c. QFit > 400 in June 2021
 - d. Mild gastritis on upper endoscopy with normal D2 biopsies (April 2021)
2. Weight loss – most recent weight at clinic 36kgs (47kgs in 2019) with BMI of 13.3
3. Upper abdominal pain (reason for initial referral to endoscopy) – resolved with discontinuing Ferrous Fumarate, currently on Ferrous Sulphate with no further symptoms

Many thanks for coming up to the hospital for your Gastroenterology appointment, it was a pleasure meeting you. You had initially been sent through for an upper endoscopy because you were experiencing some upper abdominal discomfort and your blood counts were noted to be low. This was carried out in April 2021 which showed some mild inflammation in the stomach, but was otherwise normal- there was no explanation for your low blood count. We discussed why we were looking at carrying out further testing – you were significantly anaemic in 2019 (much more than I would expect to occur in pre-menopausal women) and your stool test from June came back as positive for microscopic amounts of blood (QFit >400). You had mentioned that you had cancelled your colonoscopy because you were unable to take manage Moviprep and you were still passing solid stools on the day of the test. I have prescribed you PicoLax as an alternative and I have re-requested the colonoscopy to be done as soon as possible.

Your weight at the clinic today was 36kgs which is 11kgs less than the last weight I can see documented in 2020 (when you were discharged from the Dietetic Service). I have also asked for a CT chest, abdo pelvis to be carried out so you receive correspondence from the radiology department as well. In the meantime, I will also re-refer you on to the Dietetic Department because I wonder if they will be able to help you meet your nutritional requirements.

Your urine sample at the clinic had microscopic haematuria (small amounts of bloods that you can't see with your naked eye), and you may warrant further investigation from that point of view. The CT will be helpful, but if there is no explanation for your low blood count on your CT or colonoscopy, then we can recheck your urine at your next appointment (I will bring you back early this year) and I will ask my urology colleagues for advice if it remains positive for blood.

Your blood tests at your clinic appointment showed a haemoglobin of 95 (better, but still low), with evidence of ongoing iron deficiency and new folate deficiency – I would appreciate if you could continue your iron (please stop this a week before your colonoscopy) and I would be grateful if your GP could prescribe you **follic acid 5mg daily**. Your kidney tests were worse than I expected (eGFR 49), so I have sent out another form to recheck these, as well as to do some further tests (glomerulonephritis screen) – I will keep an eye out for the result but if you could phone the department on 01698 752 431 once you have had these taken, then I will know to look for them.

Yours sincerely

Your patient was scheduled to attend at Wishaw General Hospital this morning 11th August 2021, for a scheduled colonoscopy, for further investigations due to anaemia. She did not attend, and did not contact the Endoscopy Unit to cancel this appointment.

I have not arranged any further appointments for this lady and leave this at your discretion.

Yours sincerely

Dear Dr Hudson

Qfit>400

We contacted your practice today and spoke to Karen with regards to your patient Patricia Hunt - 1209823403.

We informed them that we have recently received a Qfit result from our labs for your patient and this result showed a Qfit>400. On checking our systems we have not received any referral for your patient to the endoscopy services for NHSGG&C.

If you wish to send a referral then please do so using the normal referral process.

Many thanks

Thanks

Needs a USOC colonoscopy – can you please list the patient (can be any list).

Patient is on iron so this should be stopped one week before. Not on anticoagulants.

I've done a letter to the patient and copied in the GP

Thanks
Alan

Patient Name: Patricia Hunt
Patient date of birth: 12/09/1982
Patient Address: 22 Cuilmuir View, Croy, Glasgow, G65 9HH

I have received the results of Mrs Hunt's duodenal biopsies from her recent endoscopy which were normal. I am unclear as to the cause of her anaemia and it would be sensible for us to review her at the clinic. I have requested this as an urgent new patient appointment. In the meantime, it may be helpful to check her bloods for coeliac disease and you may wish to consider sending her stool for qFit just to ensure no evidence of lower intestinal blood loss. If her qFit test was positive then please let us know and we would arrange for her to go direct to colonoscopy. I think I have also written recently suggesting repeat FBC/haematinics.

Yours sincerely

Dr Alan T Clarke

Dear Dr MacInnes

Patient Name: Patricia Hunt
Patient date of birth: 12/09/1982
Patient Address: 22 Cuilmuir View, Croy, Glasgow, G65 9HH

This lady's recent endoscopy was relatively reassuring. She has ongoing symptoms of reflux, although these are better since starting PPI, and it would be worth considering increasing her Esomeprazole to 40mgs twice daily if she is having ongoing problems. I would appreciate if you could consider repeating her bloods, as these have not been done for a couple of years. If she has persistent iron deficiency anaemia please let us know, as we would have to consider whether lower GI investigations are indicated given the lack of pathology in her upper GI tract.

Yours sincerely

Dear Patricia Hunt

Patient Name: Patricia Hunt
Patient date of birth: 12/09/1982
Patient Address: 22 Cuilmuir View, Croy, Glasgow, G65 9HH

I have the results of your duodenal biopsies taken recently, which were normal. Your endoscopy was requested as you were having troublesome problems with reflux, and if you are having ongoing problems then one option may be for your GP to increase your Esomeprazole to 40mgs twice daily. You had anaemia in 2019, and it would be worthwhile getting your bloods repeated at your GP practice to see if this is a persistent issue. If you are still anaemic with no explanation on your recent upper GI endoscopy, then it would be worth considering whether or not some tests looking into the lower bowel were required. I will ask your GP to update me with the results of your bloods, and we can decide the way forward from there.

Yours sincerely

Dear Dr Clarke

Patient Name: Patricia Hunt
Patient date of birth: 12/09/1982
Patient Address: 22 Cuilmuir View, Croy, Glasgow, G65 9HH

This lady attended for upper GI endoscopy on 27th April following referral with reflux and iron deficiency anaemia. She reported worsening reflux for the past few months, which was not related to any particular food groups. A recent increase in her PPI therapy was of some benefit to her symptoms. She reported no dysphagia, no haematemesis and no weight loss.

Endoscopy revealed a normal oesophagus, a non erosive gastritis and a normal duodenum. CLO test was obtained was negative.

I now have the lady's histopathology results available. D2 biopsies taken in view of anaemia show fragments of normal duodenal mucosa. I have advised the lady to continue on her current PPI therapy as it was of benefit from her symptoms and I will leave any further management at your discretion

Yours sincerely

Status: **Outpatient/NHS**
Hospital: **Monklands Hospital**
Referring Cons: **Dr Alan Thomas Clarke**

Indications

No allergy.
Current medication:
Esomeprazole 20 mg oral bd
Clinically important comments: Referred with reflux and IDA
Reports worsening reflux over the past few months, not to any particular food stuffs. Recent increase in PPI therapy with some benefit to symptoms
No dysphagia, no haematemesis and no weight loss reported.

Consultant/Endoscopist
List consultant: Mr Gavin Bryce
Endoscopist No1: Ms Nicola Drummond

Instruments

WG - GIF - HQ290 - 2857362
Disposable forceps

Premedication

Xylocaine (Spray) 100 mg

Report

The scope was retroflexed in the stomach.
The procedure was completed successfully to D2.
Apparent mucosal junction at 42cm from the incisors.

Site c: Antrum

Gastritis: mild erythematous/exudative with no bleeding.
Specimens: Urease test for H.pylori.

Site d: Second part

Specimens: 4x biopsy.

Diagnosis

OESOPHAGUS. Normal.
STOMACH. Non-erosive gastritis.
DUODENUM. Normal.

Medication

Continue medication Esomeprazole 20 mg oral bd.

Advice/comments

Mild gastritis - please prescribe eradication therapy if CLO test proves positive
D2 biopsies taken in view of anaemia

Follow up

Awaiting pathology results. Return to the GI physician.

clotest Negative

a: Lower oesophagus
(photographed)
b: Fundus (photographed)

Dear Dr MacInnes

Patient Name: Patricia Hunt
Patient date of birth: 12/09/1982
Patient Address: 22 Cuilmuir View, Croy, Glasgow, G65 9HH

Mrs Hunt phone me today as she is now very anxious about stopping her iron tablets in the lead up to her colonoscopy. She had previously become anaemic requiring a blood transfusion when off iron tablets and she is worried that this will happen again. She has been on her iron tablet for 18 months and I would hope she has built up a good reserve of iron in this time.

I have explained to her that it is important to stop these tablets to ensure optimal views during colonoscopy given her positive FIT test. I have also explained that if she develops any symptoms of anaemia then she should attend the GP for consideration of blood check for full blood count.

She seemed to be relatively assured by our discussion and we await her planned colonoscopy which I have requested urgently

Yours sincerely

Dear Patricia Hunt

Patient Name: Patricia Hunt
Patient date of birth: 12/09/1982
Patient Address: 22 Cuilmuir View, Croy, Glasgow, G65 9HH

Your GP has been in touch as your stool test has been performed at the GP practice and this is elevated suggesting possible blood loss in the lower bowel. The full blood count was done and your haemoglobin is at a reasonable level of 121 but one of the other blood tests called platelets is slightly high 504 and this suggests that there might be some inflammation in your bowel.

In view of this I think it would be sensible for us to arrange for you to get a colonoscopy and given the blood in the stool I will ask for this to be done urgently. I would appreciate it if you could attend for this test and we still await a new patient appointment at our clinic also.

If you are still taking iron tablets you will need to stop these for at least a week before you have your colonoscopy to ensure good views of the bowel.

Yours sincerely

Dear Dr Hudson

Patient Name: Patricia Hunt
Patient DOB: 12/09/1982
Patient Address: 22 Cuilmuir View, Croy, Glasgow, G65 9HH

Thank you for your referral of the above patient to the Community Dietetic Service. Ms Hunt was seen at clinic on 12th February for dietary advice to optimise iron intake.

Weight: 48.6kg Height: 1.6m BMI: 19.0kg/m²

Although first line advice for dietary sources of iron were posted out to Ms Hunt on the 31st December 2019 she reported having made little changes to her diet, but has continued to take her iron supplements regularly.

From her diet history it appears that she has limited sources of iron in her diet, together with a high intake of caffeine that may inhibit iron absorption.

I therefore reinforced dietary sources of iron and to limit caffeine containing fluids at meal times (and have a glass of fruit juice or diluting juice fortified with vitamin C instead).

Ms Hunt was happy with the information provided and no further input is required at this time and so she has been discharged from our care.

Should you wish our input in the future, please do not hesitate to re-refer.

Yours sincerely

Dear Ms Hunt

Your Reference: CHI Number 1209823403

You were referred to the Endoscopy Unit with symptoms thought to be coming from your stomach/bowel.

We wrote to you recently inviting you to contact us to make an appointment to attend the Endoscopy Unit, unfortunately you have not responded to our communication to you and you have been subsequently been removed from the Endoscopy waiting list.

We have copied this letter to both your General Practitioner and your Hospital Consultant. If you have any ongoing concerns you should discuss this with your General Practitioner.

Yours sincerely
Elizabeth Dolan

CLINICAL INFORMATION**History of presenting complaint / examination findings / investigation results****Presenting complaint**

Main

presenting Complaint: Request to be reappointed for upper GI endoscopy

Reason for Referral: Dear Doctor,

Many thanks for reappointing this 38-year-old lady who has troublesome symptoms of GORD despite Omeprazole 20mgs bd. Her main symptom is upper abdominal epigastric pain. She has a history of previous iron deficiency anaemia and was due to have an endoscopy earlier this year to investigate this further however, unfortunately, she failed to attend. This is her second endoscopy that she has failed to attend due to anxiety. I had a long discussion with her today and explained the importance of this and that she must attend. She is currently already taking anti-anxiety medication. She has tried lifestyle measures including eating regular meals and cutting down on alcohol and caffeine intake. She denies any weight loss. As mentioned, she remains on iron replacement therapy, however, I have updated her FBC and will let you know of any significant results. As you will be aware, she had a significant iron deficiency anaemia requiring transfusion in December 2019 and due to her ongoing symptoms I certainly think she warrants further investigation with upper GI endoscopy and she assures me she will attend.

Kind regards,

Yours sincerely,

Dr. Rita MacInnes

Dear Dr Hudson,

Discharge Summary

Patient Name: Patricia Hunt
Patient date of birth: 12/09/1982
Patient Address: 22 Cullmuir View, Croy, Glasgow, G65 9HH
Date of admission: 21/11/2019
Date of discharge: 27/11/2019

Diagnosis:
Low haemoglobin

Procedure:
Repeat full blood count post transfusion

Co-Morbidities

- 1.
- 2.

Discharge Medication:
None

Follow up:
Referred back to GP

This lady had a return visit to the Ambulatory Emergency Care Unit clinic for a repeat full blood count to check her haemoglobin post transfusion. Today her haemoglobin has come up from post transfusion haemoglobin of 5.3 to 7.0. She has been discharged from Ambulatory Emergency Care, but we would be obliged if you could recheck her haemoglobin in a couple of weeks' time. She is currently on iron sulphate tablets.

Many thanks,

Yours sincerely

Elizabeth Smith

Dear Dr Hudson

Patient Name: Patricia Hunt
Patient date of birth: 12/09/1982
Patient Address: 22 Cuilmulr View, Croy, Glasgow, G65 9HH

Following your referral letter dated 22 June, arrangements were made for Ms Hunt to go "straight to test" with a view to upper gastrointestinal endoscopy. However, I have been informed by Patient Focus Booking (PFB) that Ms Hunt did not respond to correspondence from them regarding the planned procedure and has therefore been removed from the Waiting List for this investigation.

If Ms Hunt still wishes to undergo the procedure, then please kindly re-refer her but no further appointment is being sent at present.

Yours sincerely

Dr A T Prach
Consultant Physician & Gastroenterologist

Dear Ms Hunt

Your Reference: CHI Number 1209823403

You were referred to the Endoscopy Unit with symptoms thought to be coming from your stomach/bowel. We wrote to you recently inviting you to contact us to make an appointment to attend the Endoscopy Unit, unfortunately you have not responded to our communication to you and you have been subsequently been removed from the Endoscopy waiting list.

We have copied this letter to both your General Practitioner and your Hospital Consultant. If you have any ongoing concerns you should discuss this with your General Practitioner.

Yours sincerely
Elizabeth Dolan

Directorate Support Manager

PatientBooking.WG@lanarkshire.scot.nhs.uk

We have an email address available for appointment cancellations/queries. Please note that we are unable to book or reschedule appointments through this email.

CLINICAL INFORMATION**History of presenting complaint / examination findings / investigation results****Presenting complaint**

Main

presenting Complaint: Request for OGD

Reason for Referral: Dear Doctor,

This 37-year-old lady was initially referred for an upper GI endoscopy, having been admitted with epigastric pain, significant anaemia and weight loss. An outpatient scope was planned, however, unfortunately she was unable to attend the offered appointment and was told another one would be sent out. She attended my colleague with vomiting after food which was managed with antiemetics and PPI. A further request for an upper GI endoscopy was sent on the 22nd of June.

I reviewed the patient today and unfortunately it appears that she never received the letter sent out to her asking her to make an appointment. She states she did receive the initial one back in April but not the one that would probably have been sent in July or August.

I would therefore be grateful if you could arrange one further appointment for her to have an upper GI endoscopy, given that she still has ongoing symptoms.

Many thanks.

Yours sincerely,

Dr. Vicki Winchester
Locum GP

Dear Dr McGregor,

Re: Patricia Hunt, 22 CUILMUIR VIEW CROY, KILSYTH, G65 9HH
CHI: 1209823403

I am writing to inform you that I have discharged Patricia from my caseload today 13th May 2019 as she has successfully managed to complete detoxification from Methadone.

I have kept her case open for a couple of months to ensure that there were no further issues and to give Patricia the option of accessing additional support if required. She has not requested any further input since this point and as a result I am discharging her from the service.

I am hopeful that there should be no more need for input from the addictions team. However, should Patricia require any further input in the future please do not hesitate to encourage the patient to re-refer.

Yours Sincerely,

A handwritten signature in black ink, appearing to read "Elizabeth Marr".

Reported Condition:
HEARTBURN PAIN - 4 DAYS

Consultation details:

History - pc - heartburn
hpc - has been taking Omeprazole 20mg for about 2 years - prescription ran out 2 weeks ago - GP wanted to check BP - on Thursday at work started getting heartburn - initially had pain in epigastric area - got worse - took 2 Rennie's - then pain went up across top of chest & arms - took 2 Bisodol from work colleague & pain resolved - didn't feel clammy, sweaty, no palpitations - pain all resolved. Was fine until Friday night. Had burger & chips for dinner - 30 minutes later felt heartburn - just in epigastric area same as is usual for heartburn symptoms - took 2 Rennie's and half hour later took another 2 - pain resolved - no other symptoms at that time. Yesterday was in Cumbernauld getting shopping at Tesco - started getting heartburn pain & pain across upper chest & arms - went in to Boots - pharmacist gave esomeprazole - was fine after that. Today at 1230 had heartburn & pain going down arms again - took esomeprazole again - pain hadn't resolved 1.5 hours later - was doubled over, took 2 Rennie's & eased the pain a bit but still has epigastric pain, no pain in chest area now, no numbness or tingling in arms, no loss of sensation. No raised heart beat, no skipped beats. Felt hot earlier. Had been taking Ibuprofen & codeine for back pain sometimes. None taken today. Has never previously had pain like this prior to starting omeprazole years ago.
pmh - depression & heartburn
dh - mirtazapine & omeprazole

allergies - none known
sh - Imp 3 weeks ago, smoker, no alcohol
Examination - T37 BP 148/91 SA02 100% P 99 regular cap refill < 2 seconds R 15
NEWS 1
general appearance pale
denies any chest pain or arm pain at present
alert & orientated
walked in to consultation room unaided
sclera clear
thin appearance
no cyanosis
abdomen: active bowel sounds heard, soft, non-tender, no guarding, no rigidity, no renal angle pain, no swelling or distension, no masses felt, no bladder palpable
Diagnosis - heartburn with associated chest & arm pain
Treatment - discussed with Medics MDGH happy to see Patricia.

Followups:
Admitted To Hospital - referred to Medics MDGH

Re: Patricia Hunt 22 Culmuir View. CHI: 1209823403

I am writing to update you on your patients care. The above named patient is currently attending my clinic within the Community Prescribing Service where he/she is prescribed **out of treatment – 0**

I would be most grateful if you would send me an up to date list of any medication that is currently being prescribed for this patient.

I will endeavour to keep you updated on the progress made by your patient, however please feel free to contact me if you have any questions regarding your Patients Care Plan.

Yours sincerely,

PP Margarita Wright

CLINICAL INFORMATION**History of presenting complaint / examination findings / investigation results****Presenting complaint**

Main presenting Complaint: Request for OGD

Reason for Referral: Dear colleagues

This lady was admitted with epigastric pain, significant anaemia and weight loss. An OGD as an outpatient was planned - unfortunately she was unable to attend the offered date and was told another appt would be sent out.

She attended me with vomiting after food. I have tried her with some cyclizine and she is continuing with her PPI.

I would be grateful if she could be sent a further appointment - given her anaemia, weight loss and now vomiting I would be grateful if she could be considered to be appointed urgently as I am concerned she may have PUD.

Many thanks, Dr Hudson.

For drugs referral please detail substance, amount, how often, how long: Dear Colleague,

Thank you for seeing the above named lady who is having problems with addiction to codeine. She is buying Neurofen plus and taking about 18 per day since February. Codeine Plus contains about 12.8mgs of codeine in each tablet, therefore she is taking approximately 230mgs of codeine per day. She feels she can manage 1 to 2 days without them then she gets quite marked withdrawal symptoms and recommences. She is quite emotional and depressed at the moment having difficulty concentrating and remembering to order her medication for her depression and then goes without for about 8 to 9 days, at which point she becomes quite low in mood again.

She feels if she could have help to come off the codeine addiction then things might improve with her emotional and depressive state.

Thank you for your input.

Yours sincerely,

Dr. S Brown

Date 25 February 2011

Dear Doctor Dick

Work Capability Assessment Outcome Notification

Patients Name	Miss P J Hunt
Patients Address	22 Cullmuir View Croy Kilsyth Glasgow G65 9HH

Patients D.O.B : 12 September 1982

This patient has been claiming Employment and Support Allowance. We recently assessed their ability to work using the Work Capability Assessment.

WCA Effective Date 25 February 2011

We have decided that your patient is capable of work from and including 25 February 2011.

This means that you do not have to give your patient any more medical certificates for Employment and Support Allowance purposes unless they appeal against this decision. But you may need to again if their condition worsens significantly, or they have a new medical condition.

We have sent a summary of the Work Capability Assessment to your patient.

If you want to ask us anything about this letter please get in touch with us. Our phone number and address are at the top of the letter.

Yours sincerely

Gregor Alexander

Patricia Hunt - 12/09/1982 - CHI: 1209823403 - CRN: 64049753H
22 Cullmuir View, Croy, Kilsyth, G65 9HH

This young lady was seen today in my clinic. She has perianal and vaginal warts.

They will require to be excised using sharp dissection on a Day Surgery list and she is fit for this. It may need two or three sessions to remove these, given the circumferential nature.

We will place her name on the waiting list and see her when she attends.

Yours sincerely

A handwritten signature in dark ink, appearing to read 'Blaithin'.

DATE 6th July '10

Dear Dr. Dick

You referred Patricia Hunt CHI Number 1209823403

to the counselling service on 24th May '10

Following the service policy this patient is now discharged for the following reason:

The patient was contacted but chose not to "opt-in" to the service

☐

The patient was given an appointment but failed to attend an initial meeting

☒

The patient failed to attend a subsequent counselling appointment without notification and has not made any further contact with this service to reschedule.

☐

The patient has been contacted by letter and informed that she/he is now discharged from this service and that this letter is being sent to you.

Should you wish to re-refer the patient to this service at a later date please do so.

Yours sincerely,

Ann Skell

PATIENT HEALTH QUESTIONNAIRE (PHQ-9)

DATE: 14/12/09

Over the last 2 weeks, how often have you been
 bothered by any of the following problems?
 (use "✓" to indicate your answer)

	Not at all	Several days	More than half the days	Nearly every day
1. Little interest or pleasure in doing things	0	1	2	3
2. Feeling down, depressed, or hopeless	0	1	2	3
3. Trouble falling or staying asleep, or sleeping too much	0	1	2	3
4. Feeling tired or having little energy	0	1	2	3
5. Poor appetite or overeating	0	1	2	3
6. Feeling bad about yourself—or that you are a failure or have let yourself or your family down	0	1	2	3
7. Trouble concentrating on things, such as reading the newspaper or watching television	0	1	2	3
8. Moving or speaking so slowly that other people could have noticed. Or the opposite—being so fidgety or restless that you have been moving around a lot more than usual	0	1	2	3
9. Thoughts that you would be better off dead, or of hurting yourself in some way	0	1	2	3

add columns:

2 4 3

(Healthcare professional: For interpretation of TOTAL,
 please refer to accompanying scoring card.)

TOTAL:

9

10. If you checked off any problems, how
 difficult have these problems made it for
 you to do your work, take care of things at
 home, or get along with other people?

Not difficult at all

Somewhat difficult

Very difficult

Extremely difficult

CLINICAL INFORMATION**History of presenting complaint****Presenting complaint**

Description: ? Polyposis ani

Comment: I would be very grateful if you could see this girl who has caused me something of a puzzle today.

She has presented complaining of finding loads of little lumps around about her anal ring and these cause her pain when she is defecating and sometime in some positions when sitting. On examination today, I was very surprised to find an extremely heavy occurrence of polypoid warty lesions all the way round her anal ring three deep in some cases and very heavily clustered. These I think were just inside, but it was difficult to examine due to being painful for her. She has one or two isolated individual lesions in the perineal area but none in the GU area. I initially wondered if this was a sexually transmitted problem, but she is adamant and I have no reason to not to believe her that she has not had any sexual contact of this nature in this area at any point in her sexually active life and she certainly has no other GU problems that would lead me to think that this is likely to be a risk. She is completely well otherwise and has no other symptoms. She has no altered bowel habit and has had no blood PR. I am uncertain as to what has caused these to occur and feel that she may need further investigation of her lower GI tract. Thank you very much for assessing this.

Kind regards.

Yours sincerely

Part 6: Outcome Details Customer input (completed by NHS provider together with the customer)

Please indicate how you feel on completion of the programme by scoring the following options out of 5 (choose all that apply). The scores are 1 = much less confident, 2 = less confident, 3 = no change in confidence, 4 = more confident, 5 = much more confident. Comments can be made on why you have chosen these scores in the box provided.

- I feel confident that I can work
- I feel more confident that I will be able to find work
- I feel more confident in my ability to manage my condition in a work environment
- I feel confident that, in general, working would NOT make my condition worse

(score
out of 5)

5

5

4

4

Comments I feel I am ready to work and finding work has improved my confidence. I really feel like I can manage my condition now.

Following this programme do you feel that with the right support, and in the right environment, you would be capable of working now, in the next 3 months or in the next 6 months?

Yes definitely, I would like to find work now.

What are your work-related plans following completion of the programme?

I am very hopeful. I will get into collage to study beauty therapy in Sep, and I am keen to find work in the meantime.

What are the most useful aspects of the programme?

I found the program really helped me speak openly was good to have one to one time and it really helped me recognise my negativity to things. It also improved my confidence a lot.

Any additional comments

Dear Dr Dick

Re: **Patricia Hunt : 120982 3403**
22 Cuilmuir View, Croy

Patricia re-referred self on 29th August 2008.

On assessment described low mood and is concerned will resort to taking drugs again. At this time plan of care discussed and agreed. Reviewed on 19th September 2008, facially bright and gaining benefit from increase to 45mg.

Unfortunately, follow-up appointment was waste and despite written correspondence has made no contact with the team. I must assume she does not wish input at the present time.

I am therefore discharging Patricia from my caseload. However, if she should require input in the future please do not hesitate to re-refer.

Yours sincerely

CHI: 120982 3403

Thank you for your referral in respect of the above named lady who was assessed at the Assessment Clinic on 04/09/08. I have enclosed a copy of her Psychiatric Assessment.

Initial assessment completed describes low mood and is concerned will resort to taking drugs again. Plan of care discussed, agreed to speak to yourself regarding medication, re-establish contact with addiction worker and information on unhelpful thinking styles to read and discuss. Further appointment arranged and I will keep you informed regarding input.

Yours sincerely,

A handwritten signature in cursive script that reads 'Margaret Knox (CR)'.

PSYCHIATRIC ASSESSMENT

Confidentiality Computerisation Access to Health Records

Date: 04/09/08

Name: Patricia Hunt

The Five 'W's

1. What do you see as being your main problem?

Currently unemployed contributing to low mood, feels lack of structure unhelpful and worried will resort to her "old ways" taking drugs. Feels sensitive, blows things out of proportion.

2. When is the problem worse?. When is the problem better/improves?

Problem worse, when no specific structure to her day. Improves when she distracts self.

3. In what situations is the problem most difficult?. Are there any places/situations where the problem is better?

4. Are there any people who help you with your problem?. Are there any people who hinder you or make things worse?.

Although has decided to take a break from partner, known him for 1 year, they still have regular contact and he is supportive.

5. What do you think causes/maintains your problems?

Worrying thinking.

Alcohol/Drug Misuse. Alcohol - no. Illicit drugs - none at present, past involvement with Mary Carlin at Addiction Team at that time on Methadone Programme.

Medication (Including non prescribed medication)

DRUGS	DOSAGE	FREQUENCY	WHEN COMMENCED
Mirtazapine	30mg	daily	Prescribed for approximately 2 years.

Cont'd...

FOCUSED INTERVENTION TEAM (F.I.T)

INITIAL ASSESSMENT FORM

Initial Case Management Plan (pre-F.I.T Discussion)

Identified Problems

Patricia describes low mood and is concerned will resort to taking drugs again.

Goals of Intervention

Mood will be at an appropriate level.

Plan for Intervention

- 1) Discuss with G.P, current medication
- 2) Re-establish input from addiction worker - to obtain support regarding past drug addiction.
- 3) Information on unhelpful thinking styles to read and discuss.
- 4) Further appointment arranged.

Kilsyth.

Dear Dr Dick,

Re: Patricia Hunt, 22 Culmuir View, Croy
CHI: 120982 3403

Thank you for your referral in respect of the above named lady who was assessed at the Assessment Clinic on 19/06/08. I have enclosed a copy of her Psychiatric Assessment.

At present Trish is not experiencing any symptoms of clinical depression. She is functioning well in her new job and gets up at 5.30a.m.

We spoke about her lack of confidence, but she did recognise that she has achieved many things over the past 3 years. Therefore, maybe Trish needs to give herself permission to enjoy her life and not focus on the unhelpful thoughts which only return when she is feeling vulnerable.

We agreed that at present there is no need for C.P.N input, but should Trish feel her mood is deteriorating to contact us. I also gave her the contact number for "Breathing Space" helpline.

Therefore, I am closing the case at present.

Yours sincerely,

Elaine Clark, Charge Nurse
Focussed Intervention Team

PSYCHIATRIC ASSESSMENT

Confidentiality Computerisation Access to Health Records

Date: 19/06/08

Name: Trish Hunt

The Five 'W's

1. What do you see as being your main problem?

Previous low mood, but since starting work at beginning of June, 08 states mood is at a good level.

2. When is the problem worse?. When is the problem better/improves?

Trish describes mood low at beginning of June when she visited G.P, however this was also the anniversary of her mother's death 7 years ago.

3. In what situations is the problem most difficult?. Are there any places/situations where the problem is better?

Trish finds it difficult when not working and became isolated at home, could not afford to go out with friends etc.

4. Are there any people who help you with your problem?. Are there any people who hinder you or make things worse?.

Boyfriend Andy appears very supportive as does Trish's family.

5. What do you think causes/maintains your problems?

No depressive symptoms at present.

Alcohol/Drug Misuse. None, although in past, has been off Methadone for over 2 years.

Medication (Including non prescribed medication)

Dear Sir/Madam,

Re: Patricia Hunt ~ DOB: 12.09.1982 (3403)
Address: 22 Cuilmuir View, Croy, by Kilsyth, G65 9HH.

I wondered if you would contact this girl (preferred contact method is mobile phone 07999 431 816).

A couple of years back she had a Heroin problem and was on Methadone for a while, but she seems to have completely stopped this for quite some time now and looks well and is currently got herself a job.

She has been on Mirtazapine 30mgs for some time, which seemed to help originally, but she has ongoing difficulties with anxiety and terrible lack of self-confidence, which means she has great difficulty going out for instance with a boyfriend to meet any of his friends or relations if she doesn't already know them. This has caused her some relationship pressure and she has also had some difficulty adjusting to a new job in a factory.

She is a pleasant girl and lives with her father, but her anxiety and depression she feels is running out of control again at the moment, and she is close to feeling that she would like to re-experience the relief for this that Heroin gave her in the past. However, she doesn't think she would go back to that way of life, but I would appreciate further assessment of her to see if there is anything.../

2.

Patricia Hunt (DOB: 12.09.82)

/...that can be done for her on the anxiety/confidence front, and possibly also review her medication, although I have decided not to increase it to the full dose of Mirtazapine at the moment.

Many thanks for your help.

Yours sincerely,

.....
Dr. D Dick

P.S. She could attend Cumbernauld if it was easier and she might prefer this as her dad lives with her at home.

I would be grateful for your opinion and advice on the above named patient. A brief outline of history, symptoms and signs follows.

Dear Dr. Forrest,

I would be grateful if you would see this girl who finds herself pregnant somewhere between 6 and 10 weeks probably. She had a period in mid to late February, but it was only cramp with very light bleeding at most and her last proper period was towards the end of January.

She has only just started to feel sick and my hunch is that she is only 6 or 7 weeks pregnant, but I can't be sure. There is nothing of note on examining the abdomen.

Patricia's main background information of note is that she has had a Codeine addiction in the past and is currently on Methadone, but at low doses and is starting to get her life together again after a difficult period. She lives with her father (her mum died some time ago) and she has recently separated from the baby's father. She just doesn't feel that under any circumstances she could cope with a baby at the moment and I would be grateful if you could assess her for a termination.

Many thanks.

Yours sincerely,

Dear Mary,

Re: Patricia Hunt (DOB: 12.09.82) 22 Cuilmuir View, CROY, G65.

Patricia Hunt who has attended you in the past with her dependency on over the counter opiates has been struggling with her addiction for the past 3 years and feels that she has not made much progress. She has been a poor attender at the clinic, but she says she is keen to try and get herself sorted out. She has requested referral to a clinic other than the Kilsyth one, can you let me know if there is any other option for her and, if so, can you recommend an alternative clinic.

She was assessed by Dr. Griffen earlier this year and he had recommended treatment with mirtazapine. so far she has not started the medication, but on discussion with her today she has agreed to give this a trial.

Many thanks for your help in this once again.

Yours sincerely,

.....
Dr. M Stephens

Dear Mary

Re: Patricia Hunt (DOB: 12.09.82) 15 Hillside, CROY, By Kilsyth, G65 9HJ.

I believe that Patricia was referred to you recently either by her own GP or Dr. Griffen. According to her records she DNA'd several times in March, but claims not to have received an appointment and I would therefore, be grateful if a further appointment could be sent.

Kind regards.

Yours sincerely,

.....
Dr. P Dove

Patricia Hunt

Dear

PATRICIA HUNT DOB: 12.9.82
22 CHILMUIR VIEW CROY KILSYTH

As you know Douglas Armstrong, Social Worker, Kilsyth Office, and I have been trying to organise a meeting of all the agencies involved to plan strategy for dealing with Patricia Hunt's continuing absences from school.

We have been able to reach agreement to meet on Monday, 29 June '92 at 3.30 pm here at the Alexander Child and Family Clinic, Coatbridge [map enclosed for those who haven't been here before].

The people who have agreed to attend in addition to the social worker and myself are:

Mr McCreadie, Head Teacher, Highcross Primary School
Mrs Hambley, Attendance Officer
Mary Shields, School Psychological Service

Mr Stewart, Reporter, will be unable to attend due to annual leave but I have had a full discussion with him.

For your information, a Children's Panel has been scheduled for the 22 July '92.

I shall also be attempting to invite Patricia's general practitioner.

I look forward to seeing you at our clinic on Monday at 3.30 pm.

Yours sincerely

C Lieberman

Dear DR. WALKER

Please find enclosed a list of names of children born in 1981 unless otherwise stated, who have been skin tested and where necessary a BCG vaccination was carried out.

If the skin test was positive a + sign is shown.

The vaccinations were carried out in the school year 1995.

Yours sincerely

Sheila Gildea

Dear Dr McGhee

About Miss Patricia Hunt - Date of Birth 12 September 1982

I am writing to you about your patient Miss Patricia Hunt. She has been claiming Incapacity Benefit and National Insurance credits because she has been incapable of work. We recently assessed Miss Hunt's ability to work using the Personal Capability Assessment.

We have decided that your patient has not met the threshold of incapacity from and including 21 July 2002. This is based on the medical examination we arranged that Miss Hunt went to on 13 June 2002 and medical information you provided. We also used information that Miss Hunt gave us.

This means that you do not have to give Miss Hunt any more medical certificates for incapacity benefit purposes. But you may need to again if her condition worsens significantly or she has a new medical condition.

We have sent a summary of the Personal Capability Assessment to Miss Hunt.

Yours sincerely

Miss C. Lynch
Manager

13th August, 2002.

The Physiotherapist,
Cottage Hospital,
KILSYTH.

Dear Colleague,

Patricia Hunt, 6 Cuilmuir View, CROY, By Kilsyth, G65 9HS. D.O.B. 12. 09. 82.

I would be grateful if you could send the above patient another appointment. She has failed to respond, I believe, on two occasions to letters sent out by yourself. Ms. Hunt said that she was on holiday on the last occasion. She is receiving sick Lines for her shoulder pain, and also analgesia, and I am afraid to say that I am slightly dubious as to her motivation to attend physiotherapy.

Many thanks.

Yours sincerely,

.....
Dr. F. McGhie.

Dear Mary,

Re: Patricia Hunt, 6 Cuilmuir View, CROY, G65 9HS. DOB 12.09.82.

Thank you for seeing this young woman for me who has finally admitted to being addicted to Codeine. She was getting Solpadol for several months for a shoulder injury and this was finally stopped because she was obviously overusing these and not attending Physiotherapy appointments which had been made for her. Apparently she has been buying them from the Chemist and now is requesting help with overcoming her addiction.

Many thanks.

Yours sincerely,

.....

I would be grateful for your opinion and advice on the above named patient. A brief outline of history, symptoms and signs follows:

I would be grtaeful if you would see this young lady, who has recently admitted an addiction to Codeine, which she now buys over the counter. She was previously referred to the CAT but failed to attend. She now feels she requires help with her addiction, and therefore I would be grateful if she could be offered an appointment.

Many thanks.

Dear Colleagues

Re: Patricia Hunt, 15 Hillside, Croy by Kilsyth G65 9HJ
Date of Birth 12.09.82

Please would you see Patricia once again for me. You saw her last year when she had an addiction to Codeine, and she was successfully weaned off these over-the-counter preparations by using Lofexidine and Chlordiazepoxide. She has been fine for the last few months, but she came to admit today that she has been taking some Neurofen Plus over-the-counter up to four a day over for the last two or three weeks, and that she feels tempted again to take more, although is trying to control this at present, because she knows there is a real risk that she will take more than recommended doses of these drugs. I have counselled her against this. She seems keen to seek help once again. I wonder if you could see her.

Yours sincerely

.....

Dear Dr McGhee

CLAIMANT: Patricia Jane Hunt
ADDRESS: 22 Cullmuir View, Croy, Glasgow
DOB: 12 September 1982
ACCIDENT: 19 February 2004

I am dealing directly with the above claimant named in connection with injuries received in a road traffic accident, which occurred on the above date. The main injuries appear to have been whiplash.

I would be obliged if you could let us have a full and detailed report dealing with the following:

1. Any relevant pre-accident medical history *nil*
2. The exact nature of injuries sustained,
3. Treatment received
4. Present condition, dealing in particular with the capacity for work
5. Provide a prognosis based on your professional opinion.

It is central to our assessment of the extent of the claimant's injuries to establish the extent and duration of any continuing disability. Accordingly, in the prognosis section, we would ask you to specifically comment on any areas of continuing complaint or disability or impact on daily living. If there is such continuing disability, you should comment upon the level of suffering or inconvenience caused and, if you are able to, give your view as to when or if the complaint or disability is likely to resolve.

We confirm we will be responsible for your reasonable fees.

I attach a signed mandate permitting us to obtain this report and access all relevant medical records held.

In order to comply with Court rules, we would be grateful if you would insert above your signature a statement that the contents are true to the best of your knowledge and belief.

In order to avoid further correspondence, we can confirm that on the evidence we have, there is no reason to suspect we may be pursuing a claim against the hospital or its staff.

Yours sincerely

Dear Sir/Madam,

Patricia Hunt, 15 Hillside, CROY, By Kilsyth, G65 9HJ. D.O.B. 12. 09. 82.
Your Ref: 28121498/00/1B10/DCT.

Dr. McGhie is currently on holiday and in this respect I am replying to your letter dated 1st June 2004.

I can confirm that Patricia had no relevant pre-accident medical history. In the R.T.A. on 19/02/04 she suffered a whiplash type injury to her neck, with tenderness over the paravertebral muscles, confirmed when she was examined on 21/02/04. She had full range of movement and was given Ibuprofen 400mgs three times daily.

When she was reviewed on 27/04/04 she still had some neck and was given Voltarol on this occasion, along with a heat rub. On 24/06/04 she said her neck still aches a bit at times and is uncomfortable when she lies the wrong way in bed. There is also some morning stiffness.

Apparently, she also suffered a forehead bruise and graze at the time of the accident but this healed within a week. She was also anxious for two or three days following the time of the accident.

Her treatment received has already been documented but she was also given a Sick Line from the time of the accident onwards, and she remains off sick to date, with her current Line being given for six weeks from 24th June 2004.

I...

I...

She said she had to leave her work as she could not carry the heavy boxes due to pain in her shoulder and neck, and as it was a temporary position on this basis she had been paid off in any case.

I would think this girl would make a full recovery over a period of time, and it would seem that her ongoing neckache is relatively minor now.

I trust the above information is of value to you.

 Yours faithfully,

.....
Dr. D. Dick

Dear Ms. Hunt,

I am writing this because Dr. McGhie has now left the Partnership. Your Insurance Company is requesting copies of your full medical records in connection with your recent accident.

You have signed a consent form for us to send copies of all your medical records to the appointed specialist.

I am writing because I do not have an up-to-date phone number for you. I want to check that you are absolutely clear that all of your medical records, including your attendance at the Community Addiction Team will be released to Direct Line. It will not just be those medical records relating to the accident directly.

I will not forward the records until you confirm to me by phone or in writing that you are aware of this and are quite happy about it.

Kind regards.

Yours sincerely,

.....

Dear Dr ~~McChee~~ *Hudson*

About Miss Patricia Hunt - Date of Birth 12 September 1982

I am writing to you about your patient Miss Patricia Hunt. She has been claiming Incapacity Benefit and National Insurance credits because she has been incapable of work. We recently assessed Miss Hunt's ability to work using the Personal Capability Assessment.

We have decided that your patient has not met the threshold of incapacity from and including 11 November 2004. This is based on the medical examination we arranged that Miss Hunt went to on 19 October 2004 and medical information you provided.

This means that you do not have to give Miss Hunt any more medical certificates for incapacity benefit purposes. But you may need to again if her condition worsens significantly or she has a new medical condition.

We have sent a summary of the Personal Capability Assessment to Miss Hunt.

Yours sincerely

Miss T. Archibald

Dear Mary,

Re: Patricia Hunt, Dob - 12/9/82, 15 Hillside, Croy, By Kilsyth

Thank you for referring the above whom we assessed jointly today (10/2/05). Now twenty two, she lives with her father, her mother having died almost 4 years ago from a very sudden heart attack. She has one older full brother and a half brother from her mother's previous marriage. They both live locally. The family is very supportive and relationships are close.

Since her mother's death, things have fallen to pieces. After a non successful period on anti-depressants, she began to get headaches and to take prescribed and then over the counter Opiates as a remedy. She became dependent on the codeine component of over the counter compound tablets but has also from time to time been able to get Diconal through some contact or other. Her consumption of codeine compound tablets has reached as high as thirty six tablets per day but more recently with your encouragement, she has managed to get down to four tablets per day.

In some other ways too, she has been unable to adjust to her mother's death. She has suffered from depressed mood with some suicidal ideation in the past (but not now), feeling intermittently that life is not worth living, and having a tendency to cry herself to sleep frequently with thoughts of her mother and what might have been, and guilty thoughts about her own drug use. After a period of initial insomnia though, her sleep remains undisturbed with no early morning waking. Her appetite is a bit impaired with varying level of interest in food and I think she has recently lost some weight. Her concentration appears reasonably good.

The only matter of relevance in her developmental history was that she developed extreme school avoidance at aged thirteen (for unknown reasons) but connected with shyness and spent more than two years in care because of this attending a residential school and later a high input special day school./

Patricia Hunt
Dob - 12/9/82

15/2/05

She seems to have got over this in adulthood, and there seems no residual social maladjustment.

Impression

The fundamental problem here seems to be one of prolonged unresolved grief. The Opiate dependence is probably secondary to this disturbance though of course, has taken on a life of its own because she still has a level of physical dependence and gets withdrawal symptoms when she stops taking Codeine. She continues to have a tendency to buy Diconal if the opportunity is available. It is worth noting that she has never taken drugs recreationally or for gross intoxication and, by her account at least, is not particularly involved in the illicit drug scene. I note that despite a number of attempts at detoxification, none has been completely successful though her current consumption of Opiates is quite modest.

Regarding her mother's death, this was alone sudden but also surrounded by some ambivalence. Her mother apparently had a single heart attack and then a further attack two days later. My grasp of the circumstances is a little muddled but she feels that her mother might have been given a "clot busting" drug and might not have had the second coronary, and things would still be okay. This feature combines with the suddenness of her mother's death and at an early age to produce a not unexpected morbid grief reaction.

Management

It is clear that her main clinical need at the moment is for effective bereavement counselling. I am uncertain what the best source for this might be and I suggest you explore what options are available locally. You have made a referral to Gary Tanner, Psychologist with the Addiction Service who may feel prepared to offer bereavement counselling though you would need to ask him if this is part of his remit. Regarding her Opiate use, I think this will become less of an issue as she adjusts to her mother's death. Meantime, the question of whether she is maintained at her current level (which requires no prescription as the medication is obtainable over the counter) or whether she attempts another detox is not crucial and depends on how you and she think best to manage the problem.

Regarding her appetite and recent possible weight loss, I suggest continuing to monitor her weight. There are no current reasons to suspect an eating disorder (she believes she is too thin).

Medication wise, I suggest a trial of Mirtazepine starting with 15mg daily and increasing to 30mg and the 45mg over a three week period as tolerated. Once she has been on the full dose of 45mg for a four week period, the medication should be reviewed and then discontinued carefully if there have been no beneficial effects. In that event, I would not recommend proceeding to a further anti-depressant. /
