09-Mar-2022 Administration (P3) No response to bowel cancer screening programme invitation

04-May-2021 Mrs Kerrie Keiro Administration

Administration (P8)	Telephone follow-up Skin reaction to hair dye used on Saturday, affecting scalp/hands and most severely on face round eyes (photos in docman). Very itchy. Red and inflamed. Skin not broken. Has been trying various creams lying about at home, thinks this has made it worse (avon creams, ?alveratone cream) Tried oil on scalp which has helped. Bought Alacon (cetirizine) OTC for itch. Imp: contact dermatitis. Advised continue antihistamine. Plan emollient to use liberally and mild steroid. Emphasised to use steroid very sparingly round eye area. WSG
Intervention (P3)	Prescription by supplementary prescriber

20-Jun-2013 Dr Steven Henderson Surgery consultation

Administration (P8) Consultation Sore burning feelimng in mouth for a while Vey worried re cancer Awaiting dental clearance Smoker Food not tasting as good O/E Well Poor dental hygiene and gingivitis Try diffiam oral rinse and review if not settling Also intermittant low lumbar back pain No radiation Not using any analgesia Tender lumbar muscles Good ROM Nil focal Imp Muscular back pain Advised analgesia and review prn

07-Jun-2013 Dr Katrina Duthie Surgery consultation

Administration (P8) Consultation 1/52 urine burning and pu'in g lots ..feels raw down below. o/e red spots either lat thigh siwht few papauls? thrush...

12-Apr-2013 Dr Catriona Lawson Surgery consultation

Administration (P8) Consultation Left upper dental infection. Has registered with a dentist and hopes to see her next week. Wants antibiotics. Also taking paracetamol. Dentition scanty and in poor condition. Anxious about dental review but in the past has found things like Kalms make her more jittery so I'm not keen to give sedatives which could cause more paradoxical agitation. See how she gets on, can talk to the dentist who did say she could provide something for anxiety if needed. Metronidazole as can't take penicillin and doesn't drink alcohol.

03-Sept-2012 Mrs Samantha Mcleod Third Party Consultation

31-Aug-2012 Intervention (P3) Refer for X-Ray x-ray Turriff Hospital

Dear Dr Nickford

Mrs Jean Morley (23/11/1952) 11 Church Street, Turriff, AB53 4AL

Your patient was offered a DXA scan appointment to assess osteoporosis risk following a low trauma fracture. Your patient has phoned us to say that they do not want this appointment.

You will be aware that all low trauma fractures in men and women over 50 are automatically offered assessment as a prior fracture almost doubles a patient's future risk of fracture.

Should an individual not wish to attend we would recommend general lifestyle and falls advice. For those housebound elderly over the age of 75 years we would also suggest regular calcium and vitamin D supplements.

We would of course be happy to receive a scan referral from yourself if your patient reconsiders this offer in the future.

Should you have any questions please do not hesitate to contact us:

gram.rheumqueries@nhs.scot

Yours sincerely

Signed by Dr Alison Black

Dear Dr CL Nickford

Re: Jean Morley, 11 CHURCH STREET, Turriff, AB53 4AL
DOB: 23/11/1952

CHI: 2311522027

Your patient attended Aberdeen Royal Infirmary on: 16 APR 2023 at 18:12 hrs.

The A&E diagnosis was:

Fracture of forearm

The following treatment was given:

Jean suffered a mechanical fall today on her way to church,
landing on her knees wrists and face.
She had no indications for a CT head scan and x-ray revealed a
non-displaced left radial head fracture.
We have discharged her with a broad-arm sling, analgesia, VFC
referral and head injury advice.

At the conclusion of treatment the patient was:

Discharged
at hrs.

Follow up:

No Follow Up

8 Dec, 2015

Patient Consent Form for Video/Digital Recording for Training Purposes

Patient's name:	Jean Morley 23.11.15	Place of Video Recording:	Turneff Medical Practice
Name of person(s) accompanying patient to the consultation:		Date:	8.12.15

We are hoping to make video/digital recordings of some of the consultations between patients and Dr. SAVAGE whom you are seeing today. The videos are used by doctors training to be a GP to review their consultations with their trainers. The video/digital recording is ONLY of you and the doctor talking together. Intimate examinations will not be recorded and the camera will be switched off on request.

All video/digital recordings are carried out according to guidelines issued by the General Medical Council, and will be stored securely in line with the practice guidelines. They will be deleted within one year of the recording taking place.

You do not have to agree to your consultation with the doctor being recorded. If you want the camera turned off, please tell Reception - this is not a problem, and will not affect your consultation in any way. But if you do not mind your consultation being recorded, please sign below. Thank you very much for your help.

TO BE COMPLETED BY PATIENT

I have read and understood the above information and give my permission for my consultation to be video recorded.

Signature of patient BEFORE CONSULTATION:

X J Morley Date 8/12/15

Signature of person accompanying patient to the consultation:

Date

After seeing the doctor I am still willing/I no longer wish my consultation to be used for the above purposes.

Signature of patient AFTER CONSULTATION:

X J Morley Date 8/12/15

Signature of person accompanying patient to the consultation:

Date

Date 30/1/00

8/2/00 ① last period lasted 3 days lasted usual 5 days. Period on time. No BTB. No SI recently - so don't know re PMS. No vaginal discharge but some PMS. Unnary symptoms. Bowels OK. Under stress & recently. No other symptoms. Plc check w/ob rctomy & scabs. See if next period abnormal.

② Normally has Breast tenderness prior to period but recently has breast pain throughout cycle. No lumps noticed. o/e, Both breasts lumpy & but discrete. Mobile, ^{smooth} lump @ Breast in upper outer quad. axillae w/ob. → Refer Breast clinic.

③ Several weeks of dizziness. Worse on standing. eats well. No other symptoms except abdominal pain - now settling. o/e, BP 120/60 P 75/min Reg good. Hb Pure. abdo soft. Salt. Biv. Pulsation & mass. Tender sympathetically. femoralis ✓. Plc check FSC. Abdo USS der? MAA - although Pulsation probably palpable as very thin. Review following scan.

4/2/00 In to discuss above results. ① Scabs negative and next period was perfectly normal & normal duration. ∴ probably stress related. See if any further.

*This column has been provided for doctors to enter A, V or C at their discretion

② Still under review at Breast clinic → no letter. But has review appt 14/4/00. ∴ await results.

Provisional Diagnosis

Reason for Referral including investigations carried out (with dates)

I am referring this normally fit and well lady for exercise ECG. She has a family history of angina in her father. She is a smoker. She presented with sharp anterior chest pain, various episodes, it quite often wakens her out of sleep. There is no good history of reflux, no bitter taste in mouth, and abdominal examination was normal. Chest exam and breast exam was normal with no focal tenderness. Her pain appears to radiate to retrosternally and then over to her left shoulder. Blood pressure is well preserved at 110/64. Past medical history includes migraine, CIN I, Hpylori positive with treatment in 2002, normal chest X-ray 2002.

I would appreciate your review for investigation of possible ischaemic heart disease by exercise ECG. Resting ECG is normal. She is allergic to Penicillin. She is not on any current regular medication.

Please list below all medicines used by the patient in the past two weeks even if medicines have no apparent connection with the patient's present complaint.

Approx. Date of Prescription	Medicine	Dose & Frequency	Duration of Prescription

All Medicines Known to Disagree with Patient

18/12/2002 [V]PH - Drug allergy _CONVERTED DRUG Dr N R Shanks

Dear Dr Shanks

Mrs Jean Merley (23/11/52) 9 Graham Terrace, Alford, Aberdeenshire, AB33 8TL

Further to previous correspondence this lady did not attend for review at the Gastroenterology clinic this morning. I note she was being investigated for weight loss, abdominal discomfort and iron deficiency anaemia. Unfortunately she has failed to attend for all planned investigations to date.

I have not made a repeat appointment for her at this time but would be extremely grateful if you would discuss the issues around her failing to attend and indeed whether she wishes to be investigated. Please do not hesitate to contact me if her investigations are to be rebooked and a repeat clinic appointment made.

Many thanks

Yours sincerely

Dear Dr Shanks

Mrs Jean Morley (23/11/52) 9 Graham Terrace, Alford, Aberdeenshire, AB33 8TL

This lady was being investigated for weight loss, abdominal discomfort and iron deficiency. A barium enema was arranged, as her colon was not fully visualised on colonoscopy. She has phoned on 2 occasions to change the date of her barium enema and did not attend on the third appointment. She has also not attended for her abdominal ultrasound scan, which was booked for 25 June.

I haven't rebooked these investigations and it is unclear as to whether she wishes to be investigated. She has a review appointment at Dr Gillen's clinic on 7 October and we can discuss the situation with her at this stage.

Yours sincerely,

SHIRLEY ENGLISH,
Staff Grade Registrar.

Date Typed: 12/06/03

Dear Dr Shanks

Mrs Jean Morley (23/11/52) 9 Graham Terrace, Alford, Aberdeenshire, AB33 8TL

I reviewed Mrs. Morley at Dr. Gillen's Clinic. She was initially seen with weight loss, nausea, epigastric discomfort and alteration in bowel habit. Her routine bloods were unremarkable and anti-endomysial antibody was negative. Her upper GI endoscopy showed some minor inflammation in the distal oesophagus and biopsies from this region showed a chronic inflammatory cell infiltrate. Distal duodenal biopsies were normal. She also had a colonoscopy which was only performed to the hepatic flexure due to patient discomfort. This was normal to this point and biopsies were unremarkable.

Mrs. Morley had a CT scan on the 26th May 2003. This showed the pancreas and pancreatic duct appeared normal with no calcification. There was no evidence of retro-peritoneal lymphadenopathy. There was a small well defined low density lesion in the right lobe of the liver which was felt to probably be a simple cyst. There was also a possible small polyp in the gallbladder and it was recommended she have an ultrasound to visualise these further. Mrs. Morley informs me she has an appointment for her ultrasound at the end of June.

She has lost a further 1 kg. in weight since she was seen in the Clinic in January. She weighed 53.9kg. today. She reports still having some nausea and also has some reflux symptoms. There is no actual dysphagia but she occasionally feels that food sits in her stomach. Her appetite is satisfactory. There has been no actual vomiting. Her bowels are now completely regular opening once per day and she denies passing any blood or mucus PR.

On examination she was thin. There was no obvious jaundice, anaemia, clubbing or palpable lymphadenopathy. Abdominal examination revealed some minor right iliac fossa tenderness but no palpable masses or palpable organomegaly.

We will have to wait for her abdominal ultrasound for a further visualisation of the abnormality seen on CT. In view of her right iliac fossa discomfort and the fact that her colonoscopy was incomplete I will arrange for her to have a barium enema as an out-patient. This will hopefully allow some views of the terminal ileum. I note her sister has a history of Crohn's Disease. If her barium enema and ultrasound are unremarkable we may need to consider performing a small bowel study. I have rechecked her bloods today including haematinics and also helicobacter serology. In view of her reflux symptoms and nausea she may benefit from helicobacter eradication if her serology is positive.

PTO

2.

She may also benefit from a trial of a proton pump inhibitor such as Lansoprazole 30 mg. daily for around six weeks and possibly a regular anti-emetic such as Domperidone 10 mg. tds. to see if this helps her nausea. I have asked her to make an appointment to see us back in the clinic in three months time so we can re-assess the situation and we will be in touch with the results of her investigations when they are available.

With kind regards.

Yours sincerely,

Dear Dr Shanks

Mrs Jean Morley (23/11/52) 9 Graham Terrace, Alford, Aberdeenshire, AB33 8TL

Mrs Morley has recently had an endoscopy and colonoscopy. D2 biopsies were taken and they showed normal duodenal architecture with no evidence of coeliac disease. A biopsy was taken from her OG junction which showed some chronic inflammatory cells but no evidence of dysplasia. Colonic biopsies were taken during her colonoscopy and these were within normal limits. A see she had a chest x-ray in November which again was normal.

I have discussed the results with Dr Gillen and in view of her ongoing weight loss I will arranged for her to have a CT scan of her abdomen to exclude any intra-abdominal pathology. Reassuringly her blood tests were all within normal limits. She has a review appointment for clinic.

Yours sincerely

Dear Dr Shanks

Mrs Jean Morley (23/11/52) 9 Graham Terrace, Alford, Aberdeenshire, AB33 8TL

Many thanks for referring this 50 year old to the GI Clinic where I saw her today. Her history extends over the last couple of years and she presents with intermittent symptoms of nausea and epigastric discomfort. Her appetite has decreased and she simply can't tolerate any significant diet. She never vomits and has no dysphagia. She had lost up to 2 stone in weight, but is unsure of the exact amount. She has an intermittent bowel habit and describes several days of her bowels not opening, followed by loose stool for several days. Her bowels, at most, open 4 times daily and she occasionally passes pale stool. She has abdominal bloating and colicky abdominal discomfort. She has never noticed any blood PR. She is feeling tired and washed out and recently had to take some time off work. She has had some social problems with the breakdown of a relationship and wondered if this had contributed.

She has no past medical history of note and is on no regular medication. Her sister has suffered from Crohn's Disease for 20 years, but she has no other family history of inflammatory bowel disease. She is a smoker of 20 cigarettes per day and rarely takes alcohol. She works as a cleaner.

Abdominal examination was unremarkable. On PR examination she is FOB negative. She tolerated rigid sigmoidoscopy poorly, but the mucosa was visualised to 10 cms. There was a loss of vessel pattern and some areas of mild erythema seen. She couldn't tolerate the sigmoidoscope long enough to get a rectal biopsy.

I am not entirely sure what is causing Mrs. Morley's symptoms, but given her family history of inflammatory bowel disease, weight loss and also the abnormal findings of rigid sigmoidoscopy, I think we need to investigate her further. I have arranged for her to have a colonoscopy and have explained the procedure to her today. I have checked her routine haematology and biochemistry again today, along with her endomysial and anti-gliadin auto-antibodies. If her colonoscopy is normal, then I think we should consider upper GI endoscopy.

Contd.

Contd.

She was not keen for both these investigations to be carried out on the same day and prefers to wait on the results of her colonoscopy before deciding about upper GI investigation. I believe she has recently had a chest x-ray which I trust was normal and many thanks for forwarding her thyroid function which I see is also normal.

I haven't given her a review appointment for the clinic as yet, but will see her when she is in for colonoscopy.

Yours sincerely

Reason for Referral including investigations carried out (with dates)					
I am referring this 50 year old lady who is a smoker. She first consulted with problems regarding weight loss, tiredness and vague abdominal pain with loose stools. She also describes a good history of dyspepsia and heartburn. She is having a lot of stress from a relationship, but her weight is quite low at 53kgs. There is a family history of Crohn's in her [REDACTED]. Abdominal exam showed vague tenderness epigastrically. She refused a pr. Hpylori was performed which positive and she has been given a course of triple therapy in the interim. In view of her symptoms and history I would appreciate your review. Full blood count and ESR were normal on the 9th of December, on the 15th of November LFTs and thyroid function were normal.

I would be most grateful for your help and advice with this woman who was initially seen by John back in early December, 2001. At that time she was complaining of medial joint pain which John diagnosed as "tendonitis". He had intended referring her to you for Physiotherapy/ultrasound treatment, but it looks as though this referral was forgotten. Ms Morley has come back to see me stating that she still has ongoing problems with her right knee. My impression is that she has a chronic right medial collateral ligament strain. I would be grateful if you could see her at your earliest convenience.

Dear Dr. Teale,

JEAN MORLEY (23.11.52), 9 GRAHAM TERRACE, ALFORD

This is simply to inform you that your patient has failed to attend the Out-Patient Clinic on two occasions; on the 5th May and 20th June 2000.

She had a mammogram carried out on the 1st March 2000 which showed no suspicious features. Your referral was because she had some breast tenderness on both sides and I think there will be no need for her to come down to Aberdeen to the Breast Clinic unless she wishes to do so.

Yours sincerely,

A. K. AH-SEE

IS AN URGENT APPOINTMENT REQUIRED?	YES	X	NO		
------------------------------------	-----	---	----	--	--

Provisional Diagnosis

Reason for Referral including investigations carried out (with dates)

I would be grateful for a urgent abdominal ultrasound scan on this 48 year old lady. She presented with a history of a few weeks of dizziness, mainly worse on standing and no other symptoms except some mild abdominal discomfort, although this has begun to settle slightly. She has no urinary symptoms or bowel symptoms. Her last period was the 30th of January which was normal although slightly shorter than usual.

On examination, BP 120/60 and cardiovascular examination normal. On examining her abdomen she had an obvious pulsation just below the umbilicus, although I could palpate no mass. She was fairly tender in this region. Her abdomen was otherwise soft with normal bowel sounds and femorals were normal.

I am sure this lady's abdominal pulsation is just because she is fairly thin, however, in view of her dizziness and lower abdominal pain, I would be grateful if you could exclude an obvious aortic aneurysm.

PMH - depression 1978, colposcopy 1979, cervical diathermy for CIN I 1980, Migraine 1985.

She is on no regular medication, is allergic to Penicillin and is a smoker.

Thank you for seeing her.

Please list below all medicines used by the patient in the past two weeks even if medicines have no apparent connection with the patient's present complaint.

I would be grateful for your opinion on this 48 year old lady who presents with breast tenderness. She has been bothered by breast tenderness previously prior to her period, but recently this has begun to extend throughout the cycle. She has not noticed any lumps herself on examining. She has a family history of breast cysts. She is a smoker. On examination, both breasts are fairly lumpy, but she does appear to have a discrete mobile, smooth lump which feels as if it may be a cyst in the upper outer quadrant of the right breast. The left breast has an increased amount of lumpiness in the upper outer quadrant, but no discrete lumps are palpable. Axilla NAD. PMH - 1978 depression, 1979 colposcopy, 1980 cervical diathermy for CIN I, 1985 migraine. She is allergic to Penicillin and is on no regular medication. ● would be grateful for your opinion regarding this lump in her right breast.

Dear Mrs Morley

I have now had the result of your swab and it shows that there is some infection there. I enclose a prescription for some Metronidazole which is an antibiotic. If you are not allergic to this you should take the medicine as prescribed. If you have any doubt about being allergic to it you should contact me at the Health Centre.

Thank you.

Yours sincerely

Dr M Collins

30th January, 1984.

Messrs. G.D. Kellas & Co.,
Solicitors,
4 High Street,
Inverurie.

Dear Sir,

RE: MRS. JEAN MORLEY, 16 CHARLES GARDENS, INVERURIE.

Thank you for your letter of 25th January, 1984, concerning Mrs. Morley's accident at a Fireworks Display on 5th November, 1983.

I attended Mrs. Morley at the Casualty Unit at Inverurie Hospital shortly after the accident and found her to have a laceration, about 1½ ins. in length, on the inner aspect of her left knee with a large area of surrounding bruising. The skin was slightly charred. This wound was cleaned up, and stitched. Healing was satisfactory but she required a course of antibiotic after developing a slight wound infection.

The wound is well healed, with a reasonable scar at the site. Examination reveals no tenderness, but Mrs. Morley tells me that she sometimes experiences pain at the site of the wound in the evening. I would not expect her to have any long term sequela from this injury.

Yours faithfully,

DR. DAVID B. HOOD.

Dr. V.W. Johnston,
Health Centre,
Constitution Street,
Inverurie.

This lady is well into her 5th pregnancy and I would be grateful if you would see her with a view to confirming her gestation and for consideration for post partum sterilisation.

Her periods have been totally irregular since the birth of her last baby and the last bleeding she had was on 19th February this year. However, clinically her fundus is about 2 fingers above the umbilicus and she says first felt foetal movements in early May which would confirm her pregnancy more in the region of 26 weeks.

Her pregnancy has so far been complicated by some lower abdominal pain for which she was empirically given Amoxil.

22 APR 1982

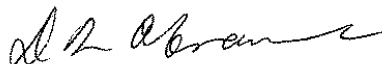

Dear Dr. Taylor,

Re: MRS. JEAN MORLEY (D.O.B. 23.11.52), 8 BALQUHAIN HOUSE, INVERURIE

Thank you for referring this patient. I am very sympathetic about her problems, mainly with the overcrowding and the depressive situation. The patient, however, was quite certain that she did not wish to have a termination, so under these circumstances there is very little that can be done. I spoke with her [REDACTED] who agreed with the patient's decision, even if he was slightly surprised by this, and said he would back her up. I am surprised re the overcrowding, but possibly one of the solutions is rehousing. I have no doubt that your good efforts will be directed towards that end. If I can help further by writing letters supporting the situation I would be only too pleased to do so. However, you can see the problems if the patient announces that she does not want to be terminated. I did discuss with her sterilisation after the baby and discussed this with Mr. Mitchell but there seemed to be a lack of receptivity to this idea. I do think, however, that it would be worth pushing.

With kind regards,

Yours sincerely,

D. R. ABRAMOVICH,
Consultant Gynaecologist.

The Housing Manager,
Gordon District Council,
Gordon House,
Blackhall Road,
INVERURIE.

Dear Sir,

I have received a letter from W. Metford, Social Worker regarding the housing of Mrs. Morley, 8 Balquhain House, Inverurie - Date of Birth 23.11.52 and I have been asked to support her application on medical grounds for housing and the main problem seems to be that of overcrowding. Her [redacted] suffer from eczema, her [redacted] has an enuresis problem, [redacted] also has an enuresis problem and as you know Mrs. Morley herself suffers from anxiety depression and I therefore support her application on medical grounds.

Yours sincerely,

Dr. C.I.T. CRUICKSHANK

Dear Mrs. Morley,

My apologies for this delay in contacting you, though if you did visit the Housing Department when you called at this office, this letter may tell you nothing new.

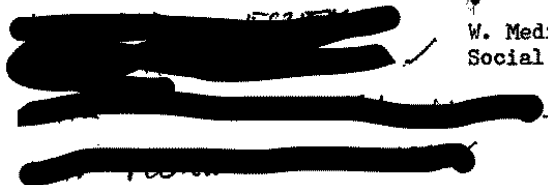

The Housing Department agrees that you are overcrowded, but there are at present some twenty applicants for the same type of housing ahead of you on the transfer list alone.

There seems little likelihood of any immediate offer of a house, but your prospects would be improved if your doctor is prepared to support your application on medical grounds, or if you are prepared to broaden the area in which you would consider a house.

Yours sincerely,

W. Medford,
Social Worker.

Dear Dr Taylor

MRS JEAN MORLEY (27) 8 BALQUHAIN HOUSE INVERURIE

I saw Mrs Morley at the Colposcopy Clinic again today for follow up following her cervical diathermy on 22.7.80. I thank you for your letter indicating that she is now around seven weeks pregnant.

On colposcopic examination there was no evidence of any residual lesion. I took a repeat smear.

I have arranged to see Mrs Morley at the Ante-Natal Clinic.

The repeat smear has been reported as normal and satisfactory.

I will ask Dr MacGregor from Cytology to arrange her follow up at the Cytology Clinic. Since her EDD is around the 10th of June perhaps an appointment in early July would be appropriate. In the meantime I will take a repeat smear at the ante-natal clinic at her 30 week visit.

Yours, sincerely

P M FISHER

3 JUL 1980

Dear Dr. Cruickshank,

Mrs. Jean Morley (23.11.52) 8 Banquain House, Inverurie.

I saw Mrs. Morley at the Colposcopy Clinic to-day. I have repeated the smear. Once again on colposcopy there is a mild aceto-white area on the anterior cervix associated with vascular stippling. The area is also Schiller's positive. I have taken a biopsy from this area and repeated the smear.

The biopsy has shown no convincing evidence of dysplastic change. We will see Mrs. Morley for review at the Colposcopy Clinic in six months.

Yours sincerely,

P. M. FISHER,
Senior Registrar.

P.S. The smear continues to be reported as suspicious. In this circumstance I think it would be better to proceed directly to diathermy of the suspicious area.

19th September, 1979

28 SEP 1979

Dear Dr. Ramsay,

JEAN MORLEY (26) 8 BALQUHAIN HOUSE, INVERURIE

Mrs. Morley attended the Colposcopy Clinic for investigation of an atypical smear.

On examination there was a mildly affected area of the epithelium on the anterior cervix. This was mildly aceto-white staining and was Schiller's negative. A biopsy was taken which showed that there was a very mild dysplasia but no other significant abnormality.

Mrs. Morley will certainly require follow-up. Hopefully, the mild dysplasia will clear itself. We will see her for review at the Colposcopy Clinic in 6 months.

Yours sincerely,

PETER M. FISHER
SENIOR REGISTRAR

28 JUL 1979

Dear Dr. Ramsay,

Mrs. Jean Morley (26), 8 Balquhain House,
Inverurie.

Your patient was seen in the Clinic today as a result of an atypical smear. I have, therefore, repeated a smear from a cervical erosion. She also complained of post coital bleeding but there was no contact bleeding when taking the smear.

The smear has been reported as 'inflammatory ? suspicious'. Accordingly, she will be seen at the Colposcopy Clinic

Yours sincerely,

J. Smith

Dr. Argo,
Health Centre,
Inverurie.

- 8 FEB 1979

Dear Dr. Argo,

Re: Mrs. Jean MORLEY, 8 Balquhain House, Inverurie.

9.2.79

✓ have contacted Mrs. Morley

The cervical smear taken from this lady at Hopeville, Tarves
on 15.11.77 has some cell changes which indicate that she
should have a repeat smear taken.

I would be grateful if, within the next two weeks, you will either repeat the
smear yourself or refer her to the Gynaecological Out-Patient Department, at
Woolmanhill on Mondays 2 - 3 p.m. or the Ante-Natal Clinic, Foresterhill, on
Tuesday - Fridays 9 - 10 a.m., where the smear will be repeated.

Yours sincerely,

// Dr. Mary E. Fraser,
Medical Assistant.

Mrs. Jean Morley

8 Marquis Cottages, Tarves, Ellon.

XXXXXX

XXXXXX

Mrs. Jean Morley

25

This patient has lived in Tarves for about 15 months and her husband left her about a year ago. I have seen her with a depressive illness which has improved but not cleared, and I think this is largely due to her feeling of isolation and loneliness.

She is applying for a transfer to Inverurie and I would support this on medical grounds on two counts:-

1. [REDACTED] and
2. Her children will both be at school after the Summer holidays and she hopes to be able to get part-time work in Inverurie which she is unlikely to get in Tarves.

23rd June, 1978.

Hopeville, Tarves,

Ellon, AB4 0JY.

MRS. JEAN MORLEY

BROOMHILL CARAVAN SITE, KINTORE.

22

Mrs. Jean Morley

23.11.52

This patient has requested medical support for her Council house application. The family currently live in a caravan which is subject to the problems of condensation and water leakage in stormy weather. She has two infant children and a combination of damp and variable temperature does not help in the recovery from a recurrent upper respiratory tract infections of childhood. The parental marital situation is also somewhat unstable and is not improved by the cramped living conditions. The general physical and mental health of the family would certainly be improved by suitable accommodation.

1st February, 1974.

Dr. J. H. Batchellor,
64, Harehills Road,
LEEDS, 8.

Dear Dr. Batchellor,

Mrs. Jean MORLEY,
2a, Conway Street, Leeds 8.

Admitted 25.1.74. Delivered 25.1.74. Discharged 28.1.74.

Your patient was admitted to hospital for induction of labour as she was almost certainly post-mature.

Induction was by amniotomy and intravenous oxytocin and she progressed well to a normal delivery of a live boy, weighing 3,600 grams. The condition of the baby was good at birth and the third stage uneventful.

Mother and baby seemed well after delivery. Her haemoglobin was 84% and she was breast feeding the baby when they were discharged. The baby is blood group O rhesus negative.

At her first visit to the Ante-natal Clinic, blood was taken for Rubella virus studies. This gave a titre of 1:32, which shows that she has adequate protection if there is contact with the disease in a future pregnancy.

We have not arranged to see Mrs. Morley again and would be grateful if you would carry out her post-natal review in six weeks.

Yours sincerely,

M. J. BUTTERWORTH,
Tutor in Obstetrics.

quoting ref. MJB/JP/22895

13 January 1972

Dr. J. H. Batchellor,
64 Harehills Road,
Leeds 8.

Dear Dr. Batchellor,

Mrs. Jean Georgina MORLEY (nee McLean)
2a Conway Street, Leeds 8.

Admitted 24.12.71 Delivered 24.12.71 Discharged 31.12.71

This primigravida was admitted to hospital approximately at term having had spontaneous onset of labour.

She progressed to a normal delivery of a live girl weighing 3510 G. The condition of the baby was good at birth, the third stage uneventful and the total length of labour almost ten hours.

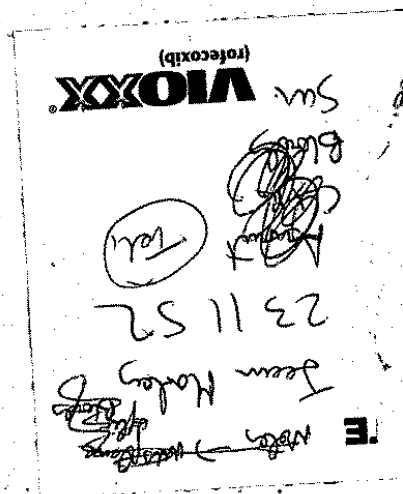

Mother and baby appeared well after delivery. Her haemoglobin was initially recorded as 73%, but picked up to 80%, and she was breast feeding the baby on discharge. As she is blood group A Rhesus Negative cord blood was sent for investigation. The baby is O Positive and therefore anti-D Gamma Globulin was given.

She was given contraceptive advice while in hospital, ~~and~~ we have not arranged to see her again, and would be grateful if you could undertake her routine postnatal care. We are trying to achieve cervical cytology in 100% of our delivered patients and would be pleased if you could arrange for this to be done.

Yours sincerely,

M. J. Butterworth

Report

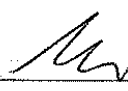

The bowel preparation was good. The instrument was inserted 80 cm to the hepatic flexure. The examination was limited by patient discomfort.

To the place of insertion the bowel was normal.
Poorly tolerated.

Diagnosis
Normal Colonoscopy.

Final Disposition
For endoscopy in 3 weeks.

Comments
Right colon not seen but symptoms not suggestive of right sided disease. O.G.D. arranged on separate day according to patients wishes and as suggested by referring doctor. Copy Dr. Gillen.

MEDICAL MICROBIOLOGY

Samples are received and investigated 24-hrs per day, seven days per week. However, if a routine telephone enquiry could be made only during core time i.e. 8.30am - 5.00pm.

BACTERIOLOGY

Telephone Extensions

Laboratory Office: 52444

Main Laboratory: 52451

Requests for advice on antibiotics or other clinically-related matters should be addressed to the duty medical microbiologist who can be contacted via the office or switchboard.

VIROLOGY

Telephone Extension

Virus Laboratory 52452

Matters pertaining to virology may be discussed with the duty virologist who can be contacted via the virus laboratory or Laboratory office.
Emergency Investigations, e.g. for HBsAg, anti-HIV etc., should be requested by telephone; requests made in core time should be made via the virus laboratory, and at other times via the Laboratory office.

HIGH RISK SAMPLES: THE SAMPLE MUST BE ENCLOSED IN A LEAK-PROOF CONTAINER WITH APPROPRIATE HAZARD LABEL ATTACHED, THEN PLACED IN A SELF-SEALING PLASTIC BAG WITH REQUEST FORM IN SEPARATE POCKET.

The Laboratory Manual should be consulted for detailed information on specimens required and test procedures available.

Mrs. Jean Morley,
8 Marquis Cottages,
Tarves.

22nd November, 1977.

Dear Mrs. Morley,

The repeat cervical smear was normal, but because the previous one had been abnormal it should be repeated in one year.

Yours sincerely,

A. Gordon Iking.
