Dear Dr MacLean

LEE REID DOB 10.05.92 49 Fowler Avenue Aberdeen

Thank you for referring Lee to Mr Youngson's surgical out-patient clinic where I saw him today with Mr Youngson. He is a 3 year old boy who was born at term +11 and was a normal delivery. There was no history of any delay in passage of meconium and he was bottlefed. His mother told me that he has never had a normal bowel movement in his life because he is too frightened to go. I note that he has no problems with any wetting and he was toilet trained before the age of 2. She told me that he can go weeks without passing any stool and then when he tries to go he screams and is unable to pass stool. Between bowel movements he has a lot of faecal soiling and he also passes a lot of flatus. He does not eat a lot of constipating foods although I do note that he is fond of bananas. I understand from his mother that he recently had an enema from yourselves and that did not produce any result. There was no family history of any bowel problems.

On examination today he looks well. His abdomen was soft and non tender and was not particularly distended. I could feel some stool in his rectum and he was passing flatus. Anal examination was normal. There was faecal soiling around his anus and I could not detect any abnormality.

I think the most likely diagnosis here is functional constipation, however we do need to rule out any underlying pathology and therefore we have arranged for him to come in as a day case to have rectal biopsies performed. At this stage we will also disimpact his bowel and get him commenced on Senokot. His name has been placed on the waiting list.

Yours sincerely

Dear Doctor

This little boy suffers from chronic constipation and has now reached a point where he will not go to the toilet and tends to soil his pants. It may be that he has a fissure but I would suspect that this is more in the nature of a behavioural problem.

I would appreciate your opinion and advice.

Yours sincerely

G D MACLEAN
