Diagnosis: Fracture left little finger – sustained 4 weeks ago
Management Plan: Conservative

This lady has had her cast removed today. The little finger was very stiff and she was in some discomfort. I have referred her to hand therapy and I have explained that getting the movement back can take several weeks to a couple of months. She seems quite motivated to regain the movements and therefore I have left her to the care of the hand therapy department.

Yours sincerely

Letter dictated but sent without verification by clinician to avoid delay
