Diagnoses:

1. Rib fractures
2. Humeral fracture
3. Vitamin D deficiency

Treatment:

1. Fultium-D3 800 units bd

I reviewed this lady. Her bone density scan is normal. She does have vitamin D deficiency but otherwise her biochemistry is unremarkable. Bone turnover is low.

There is no merit in her having bisphosphonates or other osteoporosis treatment. She should have her vitamin D levels corrected and I have given her Fultium D3 800 units bd which I would be grateful if you could continue. I would suggest a repeat vitamin D measurement in three months. If this is not satisfactory please contact me, or otherwise continue the prescription.

Yours sincerely
