Diagnosis: Non union following IM nail for mid shaft fracture of humerus on
11 May 2009

I reviewed this lady in the clinic today, eight months following her IM nail. There is some evidence of callous on the AP x-ray, but none on the lateral. Clinically she still complains of pain on any movement. She is unable to lie on that side at night. She does not describe any neurological symptoms.

On examination today she had about 10° of external rotation and forward flexion limited by pain. There was a lot of tenderness at the fracture site.

I discussed her with Mr Singh. He advised that we inform Mr Ahmed, and I have written a letter.

Yours sincerely
