Dear Dr. D'Arcy

06 AUG 2007

Katrina Margery (dob: 24.05.1967) David Rook (Dob: 07.09.1957)
49 Sheppey Beach Villas, Manor Way, Leysdon ME12 4QQ

I saw this couple at the IVF clinic today. They are to proceed with ICSI treatment as indicated by David's recent semen analysis. Mrs. Margery will have Buserelin subcut over a two-week period to complete down regulation. She will then have Menopur 450iu daily for twelve days until the leading follicles are 18mm or more. She will then have HCG thirty-six hours prior to oocyte retrieval. The retrieval will be done under sedation and the eggs will be injected with David's sperm and the best two formed embryos will be transferred into the uterine cavity two to three days later. We will be asking Katrina to use Cyclogest 400mgs bd as well as Crinone for two weeks to be followed by a pregnancy test.

Yours sincerely,

Nagy M. Rafia MB, MOG, FRCOG
Consultant Obstetrician & Gynaecologist
