Dear Dr Haut

Margaret Bullen DOB: 13-12-1975
116 Ashley Terrace Alloa FK10 2ND

Thank you for referring Margaret via the Rapid Access Pathway. She is a 48 year old lady with a one week concern of a new lump in her left breast. She has no history of previous breast disease. She is otherwise fit and well. She has no family history of breast or ovarian cancer. She is premenopausal, Para 3 and breast fed. She takes Citalopram for anxiety. She has no drug allergies. She stopped smoking in May of this year.

On clinical examination I could not palpate any abnormalities in either breast, axillae or supraclavicular area and reassuringly Margaret could no longer feel the lump in her breast.

I requested a bilateral mammogram which reassuringly was normal in both breasts (Both breasts M1).

Margaret was reassured and discharged directly from radiology with breast awareness advice. She knows to contact you if she has any new concerns.

Yours sincerely

Presenting Complaint

Description: Any new discrete lump (patients over 35 years)

Examinations and InvestigationsAdditional
Information: Dear Team

We would be grateful if you could see this lady in the breast clinic. This lady contacted reception with concerns of a breast lump and as part of the Breast Clinic Direct Access Pilot we would be grateful if she could be contacted with an appointment.

I can confirm that her concern was a breast lump, the lump is not hot, red or painful and she is not currently breastfeeding, pregnant or recently had a baby.

Thank you for your assistance in this matter.

Kind Regards
The Whins Medical Practice

Patient

Dear Mrs Bullen

You had a new patient appointment with the rheumatology department today. As you did not attend (DNA) this appointment, in keeping with NHS Forth Valley Access Policy you have been removed from the waiting list.

If you wish to be seen by a rheumatologist you can contact the centralised booking service on 01324 566249 up to 21 days after your original appointment and we will add you back on to the outpatient waiting list. Please be aware that your waiting time clock will be reset from the date you contact us i.e. you will be put on the bottom of the list. This is NHS Forth Valley standard policy.

Yours sincerely

(Dictated and electronically checked by Dr Sara Else)

CLINICAL INFORMATION

History of presenting complaint / examination findings / investigation results

Presenting Complaint

Description: Pains all over body

Date Started: 01-Feb-2016

Comment: Thank you for seeing this 41 year old lady who tells me she has had pain all over her body for over a year. She feels exhausted and falls asleep at the end of the day. She has been dropping things with her right hand. Her bloods were checked and are all normal. When I saw her in December, 2016, she had pain on gripping with the right hand, but it was not typical of tennis elbow. I gave her a trial of Gabapentin and I reviewed her again today. She describes ongoing pain, mainly now in the lower back, between her shoulders and down the right arm. She is still sleeping during the day. Sometimes her knees swell up as do both her hands, particularly the right hand. She has been advised in the past that she may have fibromyalgia. She has major problems with movements of the right arm causing pain in the right elbow, but also the right wrist and up into the right deltoid area. She tells me Gabapentin did not help and she is worrying about what might be wrong with her. Her mum had a brain tumour and so she is worrying about this as well. She went to see the Physio who felt it was nerve related pain rather than muscular pain. She has asked for a Specialist opinion. I have tried her on Pregabalin 75mg bd, but would be grateful for your opinion. She is also on Citalopram. Many thanks.

Report**US**

Clinical details: Previous ovarian cysts. Now pelvic pain. ? cause.

Ultrasound report:

The patient's bladder was empty at the time of the examination.

Transvaginal imaging was performed the patient's consent.

The uterus was anteverted and appeared normal measuring 76 mm in length. The myometrium was poorly visualised, within the posterior myometrium there were at least two areas of reduced echogenicity ? ? small fibroids.

Both ovaries appeared bulky and had a volume > 19 cm3.

Multiple small follicles were seen bilaterally. Whilst ultrasound appearances are suspicious of underlying polycystic ovaries, positive diagnosis of PCOS would require correlation with biochemical and physical factors.

No free fluid was seen within the pelvis.

Chaperone: A.Barclay.

Dear Dr MacLarty

MARGARET BULLEN (13/12/75)
66 ALEXANDER MCLEOD PLACE, FALLIN, FK7 7HP

Thank you for your letter about this thirty year old para two who has had some mild smear abnormalities.

On examination with the colposcope there was a small area of aceto white change on the anterior lip. I sent some biopsies and will let you know the results when available. According to the results we will either see her for follow up in six months time or treatment at an earlier date if necessary.

Yours sincerely

JD Steven
Consultant Obstetrician and Gynaecologist
Women and Children's Unit

CLINICAL INFORMATION

History of presenting complaint / examination findings / investigation results

Presenting Complaint

Description: Pains all over body

Date Started: 01-Feb-2016

Comment: Thank you for seeing this 41 year old lady who tells me she has had pain all over her body for over a year. She feels exhausted and falls asleep at the end of the day. She has been dropping things with her right hand. Her bloods were checked and are all normal. When I saw her in December, 2016, she had pain on gripping with the right hand, but it was not typical of tennis elbow. I gave her a trial of Gabapentin and I reviewed her again today. She describes ongoing pain, mainly now in the lower back, between her shoulders and down the right arm. She is still sleeping during the day. Sometimes her knees swell up as do both her hands, particularly the right hand. She has been advised in the past that she may have fibromyalgia. She has major problems with movements of the right arm causing pain in the right elbow, but also the right wrist and up into the right deltoid area. She tells me Gabapentin did not help and she is worrying about what might be wrong with her. Her mum had a brain tumour and so she is worrying about this as well. She wants to see the Physio who felt it was nerve related pain rather than muscular pain. She has asked for a Specialist opinion. I have tried her on Pregabalin 75mg bd, but would be grateful for your opinion. She is also on Citalopram. Many thanks.

Dear Mrs Bullen

You had a new patient appointment with the rheumatology department today. As you did not attend (DNA) this appointment, in keeping with NHS Forth Valley Access Policy you have been removed from the waiting list.

If you wish to be seen by a rheumatologist you can contact the centralised booking service on 01324 566249 up to 21 days after your original appointment and we will add you back on to the outpatient waiting list. Please be aware that your waiting time clock will be reset from the date you contact us i.e. you will be put on the bottom of the list. This is NHS Forth Valley standard policy.

Yours sincerely

(Dictated and electronically checked by Dr Sara Else)

CIN1 and HPV in June 2006.

Punch Biopsy of Cervix

A small biopsy 6 x 5x 3mm is received.

Microscopy

Microscopy shows a strip of cervical mucosa from the transformation zone. Within the squamous epithelium there are viral changes and dysplasia amounting to CIN 1.

Summary: Punch Biopsy Of Cervix - CIN 1 With Koilocytosis.Reported By: Dr Annette Riley
