Dear Sir / Madam

Re: Subject Access Request under the General Data Protection Regulation

Patient: GEORGINA LOGAN DOB: 19/08/1954

Thank you for your recent request in which you seek a copy of your client's personal information.

Your request has been dealt with in line with our requirements under Article 15 of the General Data Protection Regulation and I now attach the following:

GLASGOW ROYAL INFIRMARY RECORDS
STOBHILL HOSPITAL RECORDS

Please be aware that these health records have been reviewed by a clinician and any information identifying or provided by a third party has been removed.

We process personal information to enable us to provide healthcare services for patients; support and manage our employees; to carry out research and clinical trials; maintain our accounts and records and to carry out data matching under the national fraud initiative. We also use CCTV systems for crime prevention.

This personal information can be both clinical and non-clinical in nature and can include

- Patient health records, photographs or radiology images
- Video/telephone recordings, including CCTV images
- Witness statements
- Incident reports
- Complaints files
- Emails

The source of our data includes Patients, General Practitioners, Healthcare, Social and Welfare organisations, Legal representatives and Police forces.

We sometimes need to share the personal information we process with the individual themselves and also with other organisations as listed above. Where this is necessary we are required to comply with all aspects of the General Data Protection Regulation

Where these organisations are based outside Europe we take all appropriate safeguards to protect your information.

Health records are kept for a limited time and this is noted below for your information

- Adult general hospital records – six years after the date of last entry
- Maternity records – 25 years after the birth of the last child
- Children's and young people's records – until the child or young person's 25th birthday.
- Mental health records – 20 years after the date of the last contact

If you have any queries, please do not hesitate to contact us.

If you are unhappy with how your request has been dealt with please contact the NHSGGC Data Protection Officer. Their contact details are noted below:

Dear Dr Weir

Re: **Mrs Georgina Logan 19/08/1954; CHI: 1908546042**
17 Sollas Place Knightswood Glasgow Lanarkshire G13 4NA

Mrs Logan is 60 year old. She was referred by yourself with regards to right foot pain however she tells me that this has entirely settled and that she is now troubled by the left dorsal mid foot pain which is atraumatic in nature and intermittent also. This lady has previously had a left sided radiculopathic pain however the pain on this occasion seems quite different to that. I understand that she has had surgery under the care of Mr Reece at Gartnavel General Hospital. She also tells me that she has recently been diagnosed with Crohn's disease and that she is on Asacol.

Examination today reveals normal posture of the foot. Her ankle and subtalar joints as well as her chopart joints move freely. Attempted motion of the tarsal metatarsal joints does seem cause pain. Radiographs suggest perhaps some very mild degenerate change within the tarsal metatarsal joints.

I have explained this to Mrs Logan. She is not keen on surgery which I think is an entirely sensible approach. I have discharged her from the clinic. She knows to get in touch with us should the need arise.

Yours sincerely,

Bilal Jamal
Specialist Registrar (Orthopaedics)

Dear Dr Spence,

Georgina Logan; D.O.B: 19/08/1954; CHI: 1908546042
17 SOLLAS PLACE, KNIGHTSWOOD, Glasgow, Lanarkshire, G13 4NA

Georgina did not keep an appointment for the Gynaecology Ultrasound Clinic today. As Mr Park mentioned, this cystic lesion is long standing dating back to 2014 with no increase in size over this period. In view of this and the pressure on these ultrasound slots I have not issued any further appointments.

Yours sincerely

Attendance: Specialty - Pain Relief; Clinic - STMSPRI-DR SERPELL PAIN RELIEF EXTRA CLINIC
Date and Time of Appointment - 01/08/2016 18:30

Clinical Comments:
Thank you for referring this 61 year old lady with chronic low back and left leg radicular pain following failed back surgery (L2/3 lumbar discectomy from December 2009). She previously attended the Pain Clinic in August 2010 and all the subsequent years has had all our usual therapies. She is currently on BuTrans 30Micrograms, Amitriptyline 75mgs nocte, topical Capsaicin, Pregabalin 300mgs bd, Methocarbamol and Quinine for bedtime leg cramps. She has received a Tens machine from us but uses it less frequently than she should. I have encouraged her to use this as much as possible. She received a caudal block but gained no benefit.

She still has quite a chaotic home life, she has been a previous amphetamine addiction, her son is a heroin addict and she tells me that her daughter who has mental health problems is terminally dying.

On review of her medication and past treatments at the clinic there is little we have to offer. I think the dose of Amitriptyline could be increased gradually further to between 100mgs and 150mgs nocte at most. I don't think we should be escalating the dose of opioid and although the patient did mention a recent hospital admission which resulted in her getting Oxycodone which she found very helpful. I have told her is that if we were ever to rotate her over to this opioid then she would have to come off her BuTrans. She then said she preferred to stay on her BuTrans patch.

We have tried to get her on our patient education classes previously but she has not engaged with them. I had a long discussion with her today about this and I think she may well now give these a try. If she engages with them then we may refer onto the PMP but my impression of this lady is that she

will not probably take the initiative to engage and therefore apart from the Amitriptyline increase we don't have anything productive to offer her.

I will book her for a Nurse review and if she does engage with education classes then certainly we will encourage her to proceed along with the PMP. If not then I think we will be discharging her.

Yours Sincerely

Dr M Serpell

Consultant in Anaesthetics & Pain Management

Attended:	18/03/2014 09:00
New/Return:	G N PAIN RELIEF
Referral Source:	General Practitioner
Consultant:	Dr Michael Basler
Specialty:	Pain Relief
Clinic:	STMBPR3-PAIN ACH DR M BASLER TUESDAY AM

Clinical Comments:

I saw this lady who presented in a very agitated state today at the clinic. Indeed, she was hyperventilating and was about to throw up which seemed to be a panic attack. She relayed a story to me that she has had four deaths over the last 2-3 months. This is on the background of her having long term anxiety and panic issues.

She was referred today for her back pain and her ongoing spasms and it is clear that she is still cure seeking in her outlook.

What worried me even more was the fact that she did have some good evidence of being incredibly anxious, confessed to having a low mood also and mentioned that she was having fleeting suicidal thoughts but had never acted on it and had no plans. I tried to call your practice to essentially get her to address these issues with the mental health services. As you know, she has had overdoses in the past.

I therefore think that it would be prudent if she was seen once again in your practice with a view to getting her re-engaged with the mental health services.

Clearly social factors are problematic, she herself had previously been an amphetamine addict, her son is a heroin addict who gives her many problems and, as stated she has had significant issues in relation to bereavements recently.

I have given her a further appointment with me and if things settle could look at reviewing some of her meds. I am not unduly worried about changing her Amitriptyline since I think that her mental health is the most prominent factor right now.

Kind regards

Yours sincerely

Dr M Basler

Dear Dr Weir

Georgina Logan, (DOB: 19/08/1954, CHI: 1908546042), 17 Sollas Place, Glasgow, Lanarkshire, G13 4NA

I saw this lady at the clinic. She is one of Dr Serpell's patients and indeed, she was involved in a trial and had phoned up Dr Serpell approximately 2 weeks ago and he has booked her in for an epidural steroid.

As far as I can see she is a failed back syndrome patient who has had multiple trials of both antineuropathic agents and opioids without any benefit. She certainly did show signs of anxiety. I note that there are considerable stresses at home with her son being a heroine addict, her husband having an obsessive compulsive disorder, her daughter her learning difficulties, although, her daughter has now moved out of the house.

Clearly we need to see whether her leg pain is helped by the epidural steroid. I am copying my letter to Dr Serpell so that he can arrange this. Obviously if this doesn't work we will be looking at a pain management type approach but I don't know how open she will be to this. I have not arranged further follow up at my clinic but she has an appointment to see Dr Serpell.

Yours sincerely

Dr M Basler
Consultant in Anaesthesia & Pain Management

CLINICAL INFORMATION

History of presenting complaint

Presenting complaint

Description: Re-appoint

Comment: Dear Dr Semple,

Thanks for seeing Georgina. She has attended the Pain Clinic before but unfortunately missed an appointment at Nurse Peacock's clinic on the 28th of September and her condition continues as before.

Reason for referral

Care type requested: Out Patient

Expected outcome: Not Specified

CLINICAL INFORMATION

History of presenting complaint
Presenting complaint

Description: Assess pain management

Comment: Dear Dr,

I would be grateful if you could see this 55 year-old lady with chronic back pain and pain in her left thigh. She was investigated extensively and had left L2/3 lumbar decompression and discectomy done in December 2009.

Post operatively she felt her pain has worsened in her leg. She was further investigated with MRI scan of the back which has not shown any significant pressure or cause for her symptoms.

She has become significantly dependant on opiates for pain management and currently on Co-codamol, Tramadol and Clonidine. She has significant functional overlay as well, making it difficult to assess her pain threshold and pain management.

I would appreciate your help regarding further management of this patient.

TO WHOM IT MAY CONCERN

Dear Sir/Madam

This lady is troubled with a bowel disorder where she may have episodes of diarrhoea. This can on occasion lead to difficulties when she is out of her house. This letter is written to explain that there is a medical reason why this lady should have access to toilet facilities if the need arises.

Your help with this is much appreciated

Yours sincerely

N F Jamieson

Dear Dr Morgan

Georgina Logan ~ 19/08/1954 ~ CHI: 1908546042 ~ CRN: 50551545H
17 Sollas Place, Glasgow, Lanarkshire, G13 4NA

Diagnosis:

1. Episodic diarrhoea
2. Diverticular disease
3. Chronic pain
4. Previous low back surgery
5. Cholecystectomy

Many thanks for referring this 56 year old lady whom I saw today as part of the Waiting List Initiative. I note that she was seen in Dr Peter Mills clinic last year. At that time he investigated her for a longstanding history of diarrhoea and she went on to have a colonoscopy which showed diverticular disease. Her colonic biopsies showed no evidence of microscopic colitis. The history is indeed of long term diarrhoea and she manages this with almost daily use of Imodium up to 4 capsules per day. It seems that she is troubled with urgency and is anxious about faecal incontinence. On occasions she may over do her Imodium and has gone a number of days with constipation and lower abdominal pain. Her appetite is good and there are no features of weight loss, there is no family history of note. She did notice that her diarrhoea worsened after her cholecystectomy in 2007. Her diet is only moderate in fibre intake. She has found that dairy products are very troublesome for her and will precipitate diarrhoea. There are not any other major food stuffs that she can avoid to improve her bowel symptoms.

With no evidence of weight loss, anaemia or vitamin deficiency it is very unlikely that this lady will have small bowel disease. It does seem most likely that she has a functional bowel disorder. There may be some worsening of this due to bile salt malabsorption following her cholecystectomy.

I discussed the use of anti-spasmodics and a more limited approach to the use of Imodium to control her bowel habit. I have suggested that for the next couple of weeks she should try Colofac tid and reduce her

Imodium. If this is not helpful I would be grateful if you would give her a trial of Cholestyramine initially 4g per day increased if tolerated to 4g tid.

Another concerns was that she has the need to visit toilets frequently whenever she leaves her house. I am writing a letter from the hospital for her to carry in case she needs to access toilets at short notice.

At present there is no plan for clinic review for this lady. I would be happy to discuss her management further.

Urinalysis today showed a trace of lymphocytes. I believe she has just finished a course of antibiotics but will write to you with the result of her MSU in due course.

Yours sincerely

N F Jamieson

1. Pain History

Any further details not covered in questionnaire, including operations, investigations, previous pain clinic treatment, etc.

FBSS
LBP and Left leg pain

MRI Spine lumbar & sacral with contrast 2012 2/12 post op:
There is loss of disc height at L2/3 which presumably is in keeping with the given history of discectomy. I am not entirely convinced that there is any nerve root compression at this level, or indeed at any other level. Canal remains widely patent. No evidence of any collection, either within the canal or involving the surgical approach.

In summary: No definite cause for current symptoms demonstrated. If the patient has specific neurology then I would be happy to review the scans again or repeat the imaging in 6-8weeks..

Dear Dr Weir

Georgina Logan, (DOB: 19/08/1954, CHI: 1908546042), 17 Sollas Place, Glasgow, Lanarkshire, G13 4NA

I saw this lady at the clinic. She is one of Dr Serpell's patients and indeed, she was involved in a trial and had phoned up Dr Serpell approximately 2 weeks ago and he has booked her in for an epidural steroid.

As far as I can see she is a failed back syndrome patient who has had multiple trials of both antineuropathic agents and opioids without any benefit. She certainly did show signs of anxiety. I note that there are considerable stresses at home with her son being a heroine addict, her husband having an obsessive compulsive disorder, her daughter her learning difficulties, although, her daughter has now moved out of the house.

Clearly we need to see whether her leg pain is helped by the epidural steroid. I am copying my letter to Dr Serpell so that he can arrange this. Obviously if this doesn't work we will be looking at a pain management type approach but I don't know how open she will be to this. I have not arranged further follow up at my clinic but she has an appointment to see Dr Serpell.

Yours sincerely

Dr M Basler

Dear Dr Duffy

Georgina Logan, (DOB: 19/08/1954, CHI: 1908546042), 17 Sollas Place, Glasgow, Lanarkshire, G13 4NA

I reviewed this lady with ongoing low back and left leg pain. She underwent L2/3 lumbar micro-discectomy in December 2009. She missed her last appointment with our nurse and, therefore, you had to refer her back to us.

Her pain is still a problem. She is currently on Pregabalin 75mg bd and Butrans 20 micrograms. She has discontinued Tramadol. She is also on Quinine and Methocarbamol for cramps, which occur predominantly in her left leg intermittently.

She was previously on a higher dose of Gabapentin and did feel that it helped her. It was very well tolerated apart from some slight sedation. Therefore, I would recommend you increase the dose to 150mg bd and then up to 300mg bd as per my hand written letter, which I gave her today. I would keep her on the current dose of Butrans and not aim to increase this further (equivalent to Morphine 50mg-60mg per day). She previously tried MST, but in view of her home life, which sounds very chaotic with the drug abuser son and dying former husband, it would be better if she does not have tablets of opioids, but uses only the patch as it is less easy to abuse.

On examination she is moderately restricted in forward flexion of her back. She is tender over both SI joint areas, but as her leg pain is the predominant pain symptoms, I will arrange for a low volume caudal block to be carried out. She is currently only on Aspirin and not taking the Clopidogrel.

She bought her own Tens machine, but I am not clear that she is using it appropriately, so I will reschedule her to see our pain nurse and for her to bring her machine with her. It may be that we will loan her one of ours, but more importantly give her thorough education on how to use it.

She quite a strong lady and I think the predominant therapy we can help with is relaxation, and so have encouraged her to attend our patient education classes. If she engages well, then I think we could take this further towards referral to the Glasgow Pain Management Programme, but in her current state she is very anxious and not fully receptive to sitting and listening and relaxation.

She will be reviewed again at the Tens clinic and when I perform the injection.

Yours sincerely

Dr M Serpell

Dear Dr Morgan

Re: Georgina Logan. DOB: 19/08/54. CHI: 1908546042.
17 Sollas Place, Glasgow, G13 4NA.

Further to Dr McCubbin's clinic letter dated 18th August 2010, I reviewed your patient lady with chronic low back and left leg neuropathic pain following L2/3 lumbar discectomy in December 2009. Her pain symptoms continue, and she actually had an angioplasty last week for severe angina.

She has tried topical Zacin cream with no benefit and for analgesia is currently on Tramadol 50mg SR bd, Gabapentin 600mg tid and Quinine for cramps. She is also on Statin, low dose Aspirin, Clopidogrel, Bisoprolol, Omeprazole and Methocarbamol.

I think the next options to try would be to change her Gabapentin over to Pregabalin and also to trial a low dose Step 3 opioid as per the last clinic letter. The patient did in fact admit that she tried a friends dose of MST 30mg and found it to be very beneficial, I think that a low dose transdermal patch might be more safer and appropriate in this lady therefore have given her a hand note for you suggesting Butrans 5ug/hr increasing at weekly intervals if required / tolerated up to 20ug/hr.

I will also appoint her for a TENS machine as she tells me that she has never had one (contrary to the last Clinic letter) and I think we will hold off on injection therapy at the moment as she would have to discontinue the Aspirin and Clopidogrel for a week to minimise the risk of epidural haematoma. I would also like to see her current cardiovascular state become more stabilised, it is only a week since the angioplasty.

She will be reviewed at our Clinical Nurse Specialist Medication Review Clinic where she will be issued and demonstrated the TENS unit.

Yours sincerely

TO WHOM IT MAY CONCERN

Dear Sir/Madam

This lady is troubled with a bowel disorder where she may have episodes of diarrhoea. This can on occasion lead to difficulties when she is out of her house. This letter is written to explain that there is a medical reason why this lady should have access to toilet facilities if the need arises.

Your help with this is much appreciated

Yours sincerely

Dear Dr Morgan

Georgina Logan ~ 19/08/1954 ~ CHI: 1908546042 ~ CRN: 50551545H
17 Sollas Place, Glasgow, Lanarkshire, G13 4NA

Diagnosis:

1. Episodic diarrhoea
2. Diverticular disease
3. Chronic pain
4. Previous low back surgery
5. Cholecystectomy

Many thanks for referring this 56 year old lady whom I saw today as part of the Waiting List Initiative. I note that she was seen in Dr Peter Mills clinic last year. At that time he investigated her for a longstanding history of diarrhoea and she went on to have a colonoscopy which showed diverticular disease. Her colonic biopsies showed no evidence of microscopic colitis. The history is indeed of long term diarrhoea and she manages this with almost daily use of Imodium up to 4 capsules per day. It seems that she is troubled with urgency and is anxious about faecal incontinence. On occasions she may over do her Imodium and has gone a number of days with constipation and lower abdominal pain. Her appetite is good and there are no features of weight loss, there is no family history of note. She did notice that her diarrhoea worsened after her cholecystectomy in 2007. Her diet is only moderate in fibre intake. She has found that dairy products are very troublesome for her and will precipitate diarrhoea. There are not any other major food stuffs that she can avoid to improve her bowel symptoms.

With no evidence of weight loss, anaemia or vitamin deficiency it is very unlikely that this lady will have small bowel disease. It does seem most likely that she has a functional bowel disorder. There may be some worsening of this due to bile salt malabsorption following her cholecystectomy.

I discussed the use of anti-spasmodics and a more limited approach to the use of Imodium to control her bowel habit. I have suggested that for the next couple of weeks she should try Colofac tid and reduce her

Imodium. If this is not helpful I would be grateful if you would give her a trial of Cholestyramine initially 4g per day increased if tolerated to 4g tid.

Another concerns was that she has the need to visit toilets frequently whenever she leaves her house. I am writing a letter from the hospital for her to carry in case she needs to access toilets at short notice.

At present there is no plan for clinic review for this lady. I would be happy to discuss her management further.

Urinalysis today showed a trace of lymphocytes. I believe she has just finished a course of antibiotics but will write to you with the result of her MSU in due course.

Yours sincerely

N F Jamieson

CLINICAL INFORMATION

History of presenting complaint
Presenting complaint

Description: Review abdo bloating

Comment: Dear Dr Mills,

This lady was seen at the clinic last year and had a colonoscopy which showed diverticular disease. Her symptoms are worse than ever and she is currently having severe diarrhoea for which she takes up to 6 Loperamide a day. She is also experiencing a lot of lower abdominal pain and cramping.

She is aware that certain foods seem to be aggravating her condition but finds it quite difficult to control her diet. She also suffers from back and leg pain and takes quite large quantities of analgesia, some of which are prescribed by us but others which we know she probably buys on the street.

I am unsure as to whether her diarrhoea is related to the diverticular disease or to an irregular supply of opiates.

I would be grateful for your opinion on this lady's symptoms and any further management.

Dear Dr Morgan,

Re: Georgina Logan. DOB: 19/08/54. CHI: 1908546042.
17 Sollas Place, Glasgow, G13 4NA.

This is the patient whom you referred to our Pain Management Service on account of chronic low back and left leg pain which is longstanding and for which she underwent an L2/3 lumbar microdiscectomy in December 2009. Unfortunately this has not improved her pain control to any extent, and she continues to experience more or less constant pain consisting of both nociceptive and neuropathic components. She rates her pain on average at 7 on the VAS Scale. There is marked sleep disturbance and significant resulting disability. She finds that she can't walk for more than fifty yards.

I also understand that she was in the Western Infirmary recently and has since been started on antianginal therapy.

In the past physiotherapy and TENS proved helpful.

She is currently on Amitriptyline 75mg daily and Tramadol NR 50mg x 6/day with incomplete pain control.

On examination, she was certainly overweight with a restricted range of movement at the lumbar spine. There was not a great deal of tenderness related to the sacro-iliac joints.

I have made the following suggestions with regard to pain control:

1. Continue Amitriptyline.
2. Convert Tramadol NR to the MR preparation which will reduce her daily intake of tablets and may also assist with wakefulness which she associates with the NR preparation.
3. A trial of Gabapentin.
4. A trial of topical Zacin cream.
5. Further treatment options might include a trial of low dose Step 3 opioids in the form of Butrans patches, or if Gabapentin is not tolerated or proves ineffective then a trial of Pregabalin.
6. Finally we may consider a high volume caudal epidural following her next review.
7. I have given her details on how she may opt-in to our Patient Information Sessions and hope that she will do so.

Yours sincerely,

Dr T McCubbin
Consultant in Anaesthesia & Pain Management

Description: Assess pain management

Comment: Dear Dr,

I would be grateful if you could see this 55 year-old lady with chronic back pain and pain in her left thigh. She was investigated extensively and had left L2/3 lumbar decompression and discectomy done in December 2009.

Post operatively she felt her pain has worsened in her leg. She was further investigated with MRI scan of the back which has not shown any significant pressure or cause for her symptoms.

She has become significantly dependant on opiates for pain management and currently on Co-codamol, Tramadol and Clonidine. She has significant functional overlay as well, making it difficult to assess her pain threshold and pain management.

I would appreciate your help regarding further management of this patient.

GENERAL COMMENTS

Final discharge letter to follow

This 51 year old lady was admitted electively for laparoscopic cholecystectomy.
Unfortunately it was necessary to cancel this patient as she was still under investigation for chest pain and abnormal ECG and also requires pulmonary function tests. We will endevour to re-arrange this surgery as soon as the necessary tests have been carried out.

Dear Dr Grieve

Georgina Logan ~ 19.8.54 ~ CHI-6042 ~ 17 Sollas Place, Glasgow, G13 4NA

Thank you for your letter regarding this lady and your request that her name be put back on the waiting list for laparoscopic cholecystectomy.

As you know, she has cancelled the first date we gave her and then failed to attend without notice on the second occasion.

I will place her name again on my waiting list but I would ask if you would be good enough to stress to her the importance of attending when her next date is given.

Kind regards.

Yours sincerely

History of presenting complaint / examination findings / investigation results

Presenting complaint

Description: Re-referral re cholecystectomy

Comment: I saw Mrs Logan today in my surgery who came to tell me that she defaulted her admission for a cholecystectomy two weeks ago at Stobhill Hospital. She says that she did not go because she had cold like symtpoms.

She was seen on the 7th April 2005 with billiary colic and un ultrasound showed gall stones in the gall bladder. She was added to the waiting list for cholecystectomy.

I wonder if you would be kind enough to add this lady once again to the waiting list.

Yours sincerely

Dr Ramon Calvo

Dear Dr Grieve

Georgina Logan ~ 19.8.54 ~ 17 Sollas Place, Glasgow, G13 4NA

This lady was due to be admitted on 4th December 2005 for a laparoscopic cholecystectomy on 5th December 2005.

Indeed on a previous occasion she has cancelled a date which we gave her. On this occasion she failed to attend with no notice given.

I have removed her name from my waiting list and I have written to her asking her to contact us to declare her wishes.

Kind regards.

Proposed procedure LAPAROSCOPIC CHOLECYSTECTOMY

(block capitals) ± OPEN CHOLECYSTECTOMY

NOTES ON GUIDANCE FOR CLINICIANS

A patient has the right to grant or withhold consent prior to examination, investigation, treatment or operation. The Doctor/Dentist must give the patient sufficient information, in a way he/she can understand about the proposed procedure, significant side effects and the possible alternatives. The Doctor/Dentist must give the patient enough time to read this form and ask any questions relating to it or their treatment. The patient must be allowed to decide whether he or she will agree to the procedure and they may refuse or withdraw consent to a procedure at any time. The patient's consent to a procedure should be recorded on page two of this form..

Written informed consent is not required for minor procedures, however written consent should be sought for:

i) any procedure that carries a significant risk.

ii) any procedure to be carried out under general anaesthesia, sedation or utilising nerve blockage or regional anaesthesia beyond that provided topically or by simple infiltration.

iii) any procedure which could be considered new, novel or experimental.

iv) any situation where there are implications for "third parties" eg. relatives and insurance companies in relation to genetic studies or HIV testing.

For further guidance on "significant risk" see section 5 of the Trust's Policy for Consent to Anaesthesia, Operation, Investigation or Treatment.

TO BE COMPLETED BY CLINICAL PRACTITIONER

The clinician completing this form should have sufficient knowledge of the proposed investigation or treatment in order to provide the patient with the appropriate information.

I HAVE FULLY EXPLAINED: To the patient/parent/guardian/next of kin (delete as appropriate)

1. **The procedure named on this form**
2. **Alternatives which are available**
3. **Significant side effects which may result from the procedure**
4. **The use and implications of medical photography and video linking**

Name (block capitals) MICHAEL HARVEY

Signature

Grade/Designation SHO

TO BE COMPLETED BY THE PATIENT/PARENTGUARDIAN/NEXT OF KIN

You should read this form and the notes below carefully. If there is anything you do not understand please ask the doctor for an explanation. The doctor is here to help you and he or she will explain the procedure. If for any reason you are not content with the explaination you are entitled to refuse the procedure. You can ask any questions and ask for more information. If you are happy with this, you understand the procedure and wish to proceed you should to sign the form.

Increasingly in modern clinical care, photography and video pictures are used for consultation and teaching purposes. In addition, you should be aware that your operation may be observed via a video link.

You may ask for a relative or a friend or a nurse to be present while the doctor explains the procedure and asks you to sign the form.

I AM — The Patient/Parent/Guardian/Next of Kin (delete as appropriate)

I UNDERSTAND — The purpose, benefits and significant risks associated with the procedure which have been explained to me by the doctor named on this form.

That the procedure may not be carried out by the Doctor who has been treating me so far.

That any procedure in addition to that named on this form will only be carried out if it is necessary and in my best interests.

That observers may see the procedure via a link but my identity will not be broadcast. I understand Medical Photography and video pictures may subsequently be used for consultation and teaching purposes.

Students need to learn how to examine patients and see how procedures are done. This is important for the future of health services. You may be asked to give consent to be examined by students during the procedure.

Please tick the appropriate box if you agree or disagree to any of the following:

To the administration of anaesthetics or to sedation if required		☑ Agree	☐ Disagree
To the procedure named on this form		☑ Agree	☐ Disagree
To the use of medical photography and the video system	☐ N/A	☑ Agree	☐ Disagree
To examination by a student during the procedure named on this form		☑ Agree	☐ Disagree

under the supervision of the senior clinician undertaking the procedure.

PCA PRESCRIPTION

Drug	Conc. mg/ml	Loading dose (mg)	Bolus dose (mg)	Dose duration (mins)	Lock-out (mins)	Continuous infusion (mg/hr)	Prescribed by

ENSURE PCA ALSO PRESCRIBED ON DRUG KARDEX.

PCA PRESCRIPTION CHANGES

Time/Date	Loading dose mg/ml	Bolus dose (mg)	Dose duration (mins)	Lock-out (mins)	Continuous infusion (mg/hr)	Resp rate	Pain Score	Sed. Score	Changed by accredited staff

CLINICAL MANAGEMENT

- Administer oxygen while on PCA as prescribed in post-operative instructions.
- Do not administer further opioids whilst on PCA unless prescribed by Acute Pain Team/On Call Anaesthetist.
- Ensure Naloxone (Narcan) 400 mcg/ml is available at all time.
- Do not position pump above site of IV and ensure PCA has dedicated giving set, with anti-syphon device.
- PCA key to be kept with controlled drug keys, not in pump.

POINTS OF EMPHASIS

- Always consider multi-modal analgesia, ie PR/O Paracetamol +/- NSAID "on a regular basis".
- Carry out regular pain scores.
- For nausea +/- vomiting administer anti-emetic always. For further details, refer to Pain Service Guidelines.
- Check and record post-op observations $^1/_4$ hourly for one hour, $^1/_2$ hourly for two hours, hourly for four hours and then 4 hourly thereafter.

POTENTIAL PROBLEMS

- Refer to troubleshooting guide in ward.

POST OPERATIVE RECOVERY ROOM INSTRUCTIONS / OBSERVATIONS

Nurse/Midwife Administration by Protocol — Authorised Nurses/Midwives Only

(Maximum number of doses as per protocol)

Warning: Check the As Required and Regular Prescription sections to ensure that the drug has not already been prescribed by a doctor.

DOCTOR'S DECLARATION (if required by Local Protocol)

I authorise nurse/midwife administration of the medicines included in the nurse/midwife administration protocol No.(s) ..... with the following exceptions: _____

Signature: _____ Date: _____

DATE	DRUG	DOSE	ROUTE	TIME	SIGNATURE OF NURSE	GIVEN BY	TIME GIVEN

Notes for Users

FOR DOCTORS:

1. Sign your name clearly against each prescription.
2. When drugs are discontinued, draw a diagonal line through the prescription box, initial and date appropriate boxes.
3. If an existing prescription is to be modified, delete existing prescription as described and re-write new instructions in a new section.
4. Use approved names in BLOCK LETTERS and use metric doses as follows:

   Milligram = **mg** Gram = **g**
   Millilitre = **ml** Microgram: **to be written in full.**
   Units: **to be written in full.**

   Fractions of a milligram should be written in micro grams. A zero should be written in front of a decimal point where there is no other figure, e.g. 0.5ml **not** .5ml.
5. Method of administration should be abbreviated as follows:

   Intravenous = **IV** Oral = **O**
   Subcutaneous = **SC** Per rectum = **PR**
   Inhalations = **INH** Topical = **TOP**
   Sublingual = **SL** Nasogastric = **NG**
   Intramuscular = **IM** Vaginal = **PV**
   Intradermal = **ID**

FOR NURSES:

1. The 'Regular' and 'as required' medicines sections should be checked at each administration round to ensure that inadvertent omission or double dosing is avoided.
2. Ensure entry is made on administration record each time drug is given. Initial in relevant date column and time row.
3. Check that all drugs prescribed at a certain time are administered.
4. If drug is not administered, enter reason in appropriate box using the undernoted coding system.

Codes for Non-Administration of Drugs

(3) Patient refused
(4) Drug not available
(5) Nil by mouth/fasting
(6) Patient unavailable
(7) Patient asleep
(8) Time varied on doctor's instructions
(9) Dose withheld on doctor's instructions
(10) Nausea/vomiting
(11) Unable to swallow
(12) No intravenous access
(13) Patient Self-Administration of Medicine
(14) Other - Record in nursing notes
(15) Prescription clarification required

Patient Observation Chart Guidelines

Not all patients will require every part of this observation chart to be completed. Clinical judgement should be used to dictate the type and frequency of vital sign monitoring required.

The following patients are considered to be at high risk of developing a critical illness therefore it would be considered good practice to commence MEWS at the earliest opportunity.

- All emergency admissions
- Unstable patients
- Patients whose condition is causing concern
- Patients requiring frequent or increasing frequency of observations
- Patients who have stepped down from a higher level of care
- Patients with a chronic health problem
- Patients who are failing to progress
- Post-operative patients

There are also patients in whom the use of MEWS may be inappropriate:

- Day case patients
- Patients requiring no observations
- Patients who are terminally ill
- Planned discharges.

This is not an exhaustive list. Although the majority of patients may benefit from utilisation of the scoring system, a nurse's own clinical judgement dictates whether he/she feels the patient reqiures scoring. For guidance on the use of MEWS, refer to the Nurse in Charge.

Pain Score

Remember to check scores after pain relief.
Patient asked to report pain at rest and on movement.
0 = No pain at rest or on movement
1 = No pain at rest, slight pain on movement
2 = Intermittent pain at rest, moderate on movement
3 = Continuous pain at rest severe on movement
Review 5 mins after I/V, 1 hour after I/M, S/C or oral analgesia.
Sustained pain score of 2 or pain score of 3 requires intervention.

Sedation Score

0 = Awake, alert, orientated
1 = Mild, aroused by verbal stimulus
2 = Moderate, aroused by physical stimulus
3 = Severe, no response
S = Normal sleep, easy to rouse
Score 2 or 3 requires immediate intervention

Nausea Score

0 = No nausea
1 = Mild (No treatment wanted)
2 = Moderate (Treatment required)
3 = Severe (Clinical problem persists despite treatment)
Review 1 hour after treatment. Inform doctor if additional treatment required.

Calling Criteria

Score is 1-3	Increase frequency of patient observations, monitor trends and inform Nurse in Charge.
Score is 3 in one category	Contact Senior Nurse and increase frequency of patient observations.
Score is 4 and above or increasing by 2 or more Patient's GCS falls by 2 or more Any patient whose condition is causing concern	Contact Senior Nurse and increase frequency of patient observations Contact Critical Care Outreach Team.

The Senior Nurse will direct patient care and contact the appropriate medical staff when necessary.

Nurse/Midwife Administration by Protocol — Authorised Nurses/Midwives Only

(Maximum number of doses as per protocol)

Warning: Check the As Required and Regular Prescription sections to ensure that the drug has not already been prescribed by a doctor.

DOCTOR'S DECLARATION (if required by Local Protocol)

I authorise nurse/midwife administration of the medicines included in the nurse/midwife administration protocol No.(s) ..... with the following exceptions: _____

Signature: _____ Date: _____

DATE	DRUG	DOSE	ROUTE	TIME	SIGNATURE OF NURSE	GIVEN BY	TIME GIVEN

Notes for Users

FOR DOCTORS:

1. Sign your name clearly against each prescription.
2. When drugs are discontinued, draw a diagonal line through the prescription box, initial and date appropriate boxes.
3. If an existing prescription is to be modified, delete existing prescription as described and re-write new instructions in a new section.
4. Use approved names in BLOCK LETTERS and use metric doses as follows:

   Milligram = **mg** Gram = **g**

   Millilitre = **ml** Microgram: **to be written in full.**

   Fractions of a milligram should be written in micro grams. A zero should be written in front of a decimal point where there is no other figure, e.g. 0.5ml **not** .5ml.
5. Method of administration should be abbreviated as follows:

Intravenous	= **IV**	Oral	= **O**
Subcutaneous	= **SC**	Per rectum	= **PR**
Inhalations	= **INH**	Topical	= **TOP**
Sublingual	= **SL**	Nasogastric	= **NG**
Intramuscular	= **IM**	Vaginal	= **PV**
Intradermal	= **ID**		

FOR NURSES:

1. The 'Regular' and 'as required' medicines sections should be checked at each administration round to ensure that inadvertent omission or double dosing is avoided.
2. Ensure entry is made on administration record each time drug is given. Initial in relevant date column and time row.
3. Check that all drugs prescribed at a certain time are administered.
4. If drug is not administered, enter reason in appropriate box using the undernoted coding system.

Codes for Non-Administration of Drugs

(3) Patient refused
(4) Drug not available
(5) Nil by mouth/fasting
(6) Patient unavailable
(7) Patient asleep
(8) Time varied on doctor's instructions
(9) Dose withheld on doctor's instructions
(10) Nausea/vomiting
(11) Unable to swallow
(12) No intravenous access
(13) Patient Self-Administration of Medicine
(14) Other - Record in nursing notes
(15) Prescription clarification required

Special requirements (e.g. other language / Communication method) .....

Proposed operation, investigation or other treatment. **(BLOCK CAPITALS)**

CAUDAL EPIDURAL

Infection, Bleeding, ↑ Pain, NV damage

I have explained the procedure named on this form to the patient in the terms which, in my judgement, are suited to their understanding. In particular, I have fully explained: the intended benefits; appropriate alternatives which are available (including no treatment); any sign if cant risks which may result from the procedure; and any extra procedures which may become necessary during the procedure (please specify major procedure above).

An information leaflet/tape has been provided .....

..... (Title)

Signature of Practitioner .....

Name / Designation (Print) ..... Pain F

Date 20 / 4 / 12

STATEMENT TO BE COMPLETED BY PATIENT/PARENT*
(* parental responsibility for a minor without capacity)

You should read this form and the notes below carefully. If there is anything you do not understand ask the Practitioner for an explanation. If the information is correct and you understand the procedure, you should sign the form. You have the right to change your mind at any time, including after you have signed this form.

I understand

- the procedure, important risks and appropriate alternatives which have been explained to me by the practitioner named on this form.
- that a practitioner other than the practitioner who has been providing treatment so far might carry out the procedure.
- that any procedure in addition to that named on this form will only be carried out if it is necessary and is reasonable in the circumstances, in relation to the medical treatment proposed, to safeguard or promote physical or mental health.

I have been told about additional procedures which may become necessary during treatment. I have listed below **any procedures which I do NOT wish to be carried out without further discussion.**

I agree -

- to the administration of an anaesthetic or to sedation if required.
- to the procedure named on this form
- that the examination for the purposes of teaching will not be undertaken without my consent
- to the emergency administration of blood or blood products

Please sign here if you refuse to consent to the emergency administration of blood or blood products.

Signature ..... Date ...../...../.....
