Dear Dr Pepper

RE: JAMES WEIR, 28 PEVERIL RISE, LIVINGSTON, EH54 6NU
DATE OF BIRTH: 12.03.89

I saw James in A&E on the 17th May 2013 presenting with anxiety and suicidal ideation due to surfacing of alleged childhood sexual abuse. He told me that he recently told family, friends and police about a 9-year history of sexual abuse by a friend who was a maths teacher. The last abuse was approximately 8 years ago. He feels very concerned about going through with the allegations and today was apparently found with a knife at his throat by his family. He had never told the doctor about any of these things. He described being very worried about his abuser's family find out.

Past Psychiatric History
Depression. Previous ODs and ADHD.

Alcohol/Drugs History
He has a history of alcohol excess although his last drink was more than 2 months' ago. He has used cannabis more recently and "*rock star*" tablets.

Personal History
James was born in Paisley and he described physical abuse by his mother and father. He did well at school and went to college for 3 years doing a HNC with possible access to nursing. He has mostly been engaged with factory work. His father is due to go to prison I believe for rape. He has 3 brothers and 5 sisters. He lives with his sister and holds down 2 jobs and is in a 10-year relationship with a baby due in 4½ months for which he wants to be a good father for.

Forensic History
He has been arrested by the police for carrying a knife.

Mental State Examination
He appeared well kempt but tearful. His speech was normal. He had suicidal thoughts although these have been chronic and was more acute recently due to the allegations surfacing. He described his mood as low and he appeared objectively low describing poor sleep and appetite. He tells me hears the abuser's voice in his head but recognises that this is in his head. He also has nightmares. He remained orientated and his insight was intact.

Opinion
Recent worsening of suicidal thoughts based on recent allegations of childhood sexual abuse. I reviewed this man with Elaine Ross, ACAST Charge Nurse and agreed that he could be discharged with some night sedation as he felt better after speaking to somebody after the

recent/

recent development. He is due to see his GP next week and we gave him the leaflet for Open Secret. I have not made an appointment for James to be reviewed in the outpatient clinic at this stage but if you feel that there are any ongoing psychiatric concerns please do not hesitate to refer him.

Kind regards.

Yours sincerely

DR ANDREW LEVER
GPST2 to Dr Rob Waller

DR SHANKAR.

INITIAL ASSESSMENT

NHS Lothian

10. History of presenting complaint

Recently told family, friends, police about 8 year history of sexual abuse by friend who is a maths teacher – last abuse about 1 year ago
Feels very worried about going through with allegations.
Family found him with knife at his throat.
Never told any doctor about these things.
Feels very worried about abuser's family finding out.
Person alcohol excess, not drunk in 3/12.

Person's view of current situation:

Feels frightened and scared

Person's usual ways of coping and strengths:

Current crisis plan? Yes / No

Previously drinking
More recently – cannabis + other drugs.

Spiritual beliefs / needs:

Family history:

3 Brothers
M. 5 sisters.
Father in prison for rape – 15 years.

Personal history:

Born Paisley.
Physical abuse by mother and father.
Did well at school. University for 3 years – HNC – access to nursing.
Arrested by police for carrying a knife.
Factory work.

Name:	CHI:	Date: ___ / ___ / ___

Social circumstances: Lives with sister. Holds down 2 jobs - 60hrs/week. 10 year relationship, baby due in 4½ months.

Past Medical History & current physical health:

Hx alcohol excess. - ?

Past Psychiatric history:

Depression
Previous O/D's
MDHQ

Carer's view of current situation (including carer's usual role):

Does carer live at same address? Yes / No

Current medication (including over the counter medicines, note name, dosage, concordance)

Omeprazole.

Sources of information: service user / carer / GP / Pharmacist / Notes / Other

Alcohol use (note quantity):

Hx Alcohol excess - last drank 7/12 ago.

Risk of dependence / withdrawal: Yes / No

Other substance use: cannabis / Zoctober tablets.

Prescribed opiate substitute? Yes / No If Yes: Details of who dispenses:

Risk of dependence / withdrawal: Yes / No

Risk of blood borne viruses: Yes / No Smoker: Never / Ex / Current: _____ per day

Name:	CHI:	Date: ___ / ___ / ___

11. Assessment

Current mental state

Appearance & behaviour: well kempt. Tearful.

Speech, communication, any thought disorder: normal.

General appearance:	Distinguishing features:	
Hair colour:	Height:	Build:
Eye colour:	Dentition:	

Name: James Weir	CHI: 1203893450.	Date: 12/2/13

10. History of presenting complaint

Several years of feeling low in mood. Over past 6/12 ↑ agitation, jumpy, low mood, argumentative, loss of interest in appearance, ↓ appetite ↓ energy ↓ sleep – given diazepam to help sleep. ↑ suicidal ideation. Has not self harmed for 3/12. Thinking constantly of slashing wrists. Feels like he ~~has~~ is going to kill himself as so low but doesn't want to. Feels jumpy and paranoid, thinks people are talking to him or punching him. Brother committed suicide 2/12 ago on return from Army, and mother died last week from cancer. Several previous OD. Experiencing flashbacks to sexual abuse, tries to avoid social situations. Copes ok in Army

Person's view of current situation:

I want help.

Person's usual ways of coping and strengths:

Current crisis plan? Yes / No

spoke with partner. Now seperated

Spiritual beliefs / needs:

Family history:

alcohol as problem since teenage years, sexually abused age 17 by friend.

Personal history:

Born in Paisley, lived with both parents for first few years. Physical abuse from mum, on childs protection register, put in care. 2 sisters. parents split when 7, both mum and dad remarried. Abuse went on till age 18. In children's home age 12–16 due to abuse + behaviour. Sisters in home as well but seperated. Main stream school, ADHD, bullied. Got A Levels. When left got apprenticeship in Engineering, worked on ships for Army. Then applied to Army – 2yrs
Dad in prison for Rape. (TA)

Name:	CHI:	Date: __/__/__

Social circumstances lives c sister, however now homeless after argument c sister. On sick leave/compassionate leave from Army. 4th Bitallion based in Catterick. Seperated from partner baby due in 8/52

Past Medical History & current physical health:

alcohol XS
gastritis caused by chronic alcohol.
scarring of liver.

Past Psychiatric history:

ADHD – dx when age 4
Several ODs

Forensic: has been in prison as teenager for theft, carrying a knife

Carer's view of current situation (including carer's usual role):

Does carer live at same address? Yes / No

Current medication (including over the counter medicines, note name, dosage, concordance)

omeprazole. prescribed anti-depressant never took.

Sources of information: service user / carer / GP / Pharmacist / Notes / Other

Alcohol use (note quantity):

3 bottles buckfast daily last 6/12 – not every day 4-5 days per week. States vomits if not having alcohol.

Risk of dependence / withdrawal: Yes / No

Other substance use:

18/12 started to smoke cannabis occasionally
3/12 ago started smoking cannabis daily. Can not quantify.

Prescribed opiate substitute? Yes / No If Yes: Details of who dispenses:

Risk of dependence / withdrawal: Yes / No

Risk of blood borne viruses: Yes / No

Smoker: Never / Ex / Current: 25g per week. per day

Name: James Weir	CHI: 1203843450.	Date: 17/2/13

11. Assessment

Current mental state

Appearance & behaviour: appropriately dressed, unshaven. reasonable eye contact.

Speech, communication, any thought disorder

quiet, monotone no evidence FTD.

Mood / affect (including sleep and appetite)

dysthymic & blunted affect.

Thought content, abnormal beliefs, abnormal experiences

describes some features PTSD relating to sexual abuse 2yrs ago - flashbacks, avoidance.
paranoid of others, thinks they are talking to him when not.
No real auditory or visual hallucinations.

Cognitive function

Insight, judgement: intact. wants help.

12. Risk Screening

Risk from others (e.g. abuse, exploitation, domestic violence) ☐ Yes ☑ No ☐ Unknown

Further investigation required? ☐ Yes ☐ No By Whom?

Risk to self (e.g. suicide, self harm, driving) ☑ Yes ☐ No ☐ Unknown

states suicidal, states unsafe if goes home.
jumped from 15ft window today

Further investigation required? ☐ Yes ☐ No By Whom?

Name:	CHI:	Date: ___ / ___ / ___

12. Risk Screening continued

Risk to others (e.g. aggression, violence, driving, access to weapons, supervision failure) ☐ Yes ☑ No ☐ Unknown

13. Summary & plan

Summary of assessment (inc. summary of risk assessment, current needs)

24yo ♂ referred by GP ? suicidal ideation. jumped from 15ft window today - STI ankle cleared by A&E.

Apparent Hx ADHD.

Eventful personal Hx + several recent stressors - death of mum, brother, relationship breakdown.

Evidence PTSD like features relating to alleged sexual assault

3/12 of agitation, anxiety, poor sleep, poor appetite + low mood.

Cannabis + alcohol a big problem.

Formulation /diagnosis

? EUPD, ? depression. ? PTSD.
However drugs/alcohol a big issue
On going suicidal ideation, no support network.
and ament symptoms → needs further ↓ assessment.

Person's desired immediate outcome(s):

Is person medically suitable for admission to psychiatric inpatient care? Yes / No

Comment:

Management plan (inc. plan to manage identified risks)

admit place of safety. - px happy - informal.
No TOW until senior R/V

17/7/13. 02[20] window	James is a 24yr old admitted Informally via A+E as requested by his GP. Jumped from 15ft today Mother had died of cancer last week although James states he was not close to her due to her physically abusing him and siblings when they were children. Has been staying with his sister at above address but wanted him out as has had enough of his alcoholism and has a young family and is pregnant. James is in the army but at present is on leave due to his present situation. Enjoys the army states that when busy in army he does not get flash backs of his mother's abuse, admits that he drinks heavily when in Army and on leave, has been drinking since the age of 12yr old. Then states that he was sexually abused by a friend at age of 17yr old which he also cant get out of his mind. James realises that he is needing to stop drinking but has been part of his life since a child. James smokes but understood and accepting that he is advised to stay in ward till Consultant review. Plus states he has no tobacco on him. Not wanting anybody to know ~~terror~~ he is in hospital at present time states he has got a good friend that

Date	*Please sign and Print Name and Designation after your entry
	he can speak too, number in admission notes. willing to stay in ward. NTO till reviewed, states very hungry, very apprehensive when shown round ward. Had something to eat and accepted the Pabrinex and PRN Diazepam and has since slept Aileen Wilson RN AWilson
18/19/07/13	Managed to receive his pabrinex, retired to bed and appeared to have slept well overnight. T. Nyoni/N T. Nyoni
19/7/13 1000hrs	CONSULTANT REVIEW BROTHER COMMITTED SUICIDE LAST YEAR - SLASHED HIS WRISTS USING ARMY RAZOR IN BARRACKS NEXT DOOR TO HIM. DAD SENT TO PRISON 4 WKS AGO (CONVICTED) (JAMES SMITH) FOR RAPING YOUNG CHILDREN. HE IS BEING ATTACKED IN THE STREET. CARE PLAN: SEE SR REVIEW SHEET R Pinnegar
18[00]	James came on walking group - spoke a lot about his life in army - seeming determined to get himself sorted. Pre-occupied with getting discharged on Monday - other patients supporting his need to be back home. Had a general conversation on how the service works - fellow patient assured him that we are fair. - I wondered about James's motivation to success in Army - can't drive - loses buses - has a pilots license - guide his statements re decision. In the group

Cont-	his time spent playing indoor Kurling. (P) Continue to invite James to groups on the ward. FGallacher FCAM GALLACHER (OT) FG 22-7-13
22:7:13. Avg 1700	Overall settled day. Spent time off ward for cigarettes, participated in ward based activity which he appeared to enjoy. James also engaged with me in 1:1 discussion: Focus was how he plans to manage his alcohol addiction. He expresses motivation to address this and plans to continue engagement with AA. We discussed coping with craving including: his physical signs + feelings prior to alcohol use. We discussed stop + delay relapse prevention strategies: James able to identify several coping strategies which he could employ. I also made a worksheet regarding Pro's + Cons of alcohol use and Pros + Cons of no alcohol use: James plans to complete this in his own time. Referral sent to homeless / moving into health James has requested supported accommodation with CPN support. If available Dr Walker instructs James can go home today. If not continue admission until Tues or Wed then discharge. L Gemmell SWAN SI/N.
1845.	left ward and on return reported that he had met his brother: Consumed 1 bottle of Buckfast and taken 2 'rocksbar' (750ml)

INPATIENT DISCHARGE SUMMARY

Dear Dr Pepper

Mr James Weir, Dob 12/03/89
35 Pyothall Court, Broxburn, West Lothian, EH52 6GX

Date of Admission: 18/07/2013
Date of Discharge: 24/07/2013
MHA Status: Informal
Consultant: Dr Shankar
Ward: 17, General Adult Psychiatry

Impression:
1. Alcohol dependency.
2. Low mood.
3. Homeless.

Discharge Medication:
Diazepam 5mg twice daily for one week only
Thiamine Hydrochloride tablets 300mg once daily for three months
Vitamin B Co-Strong two tablets three times a day for one week

Management:
1. Refer to Moving Into Health Team.
2. Given information on WLDAS.
3. Advised to self-refer to Combat Stress, although it was not clear as to whether James was actually in the Army or not.
4. We had planned to see James on the week following discharge, however, he has re-attended to A & E/Observation ward several times in the last week and has had a number of psychiatric assessments, therefore no further follow up recommended at this point.

Mr Weir was admitted to Ward 17 on an informal basis after presenting to A & E with low mood. He reported that he had several years of feeling low in mood, but over the past six months had become increasingly agitated, jumpy, argumentative, with decreased appetite, energy and sleep. In addition to this he had increased suicidal ideation, he felt that he was at risk of killing himself. He reported that his brother committed suicide two months ago on return from the Army and his mother had died last week from cancer. He is also experiencing flashbacks to an alleged sexual abuse that took place when he was 17 years old, because of this he tried to avoid social situations. However, he did report that he copes okay living in an all male mess in the Army.

Cont./...

Personal History:
James was born in Paisley and lived with his parents for the first few years. He reported physical abuse from his mum and he was on the Child Protection Register and put in care. He has two sisters. His parents split when he was aged 7 and both mum and dad remarried. He reports that the abuse went on until age 18 and he was therefore in a children's home from the ages of 12 to 16. He reports that his sisters were in the home as well but they were separated. He went to mainstream school but reports he had ADHD and was bullied. He did, however to get A Levels. When he left school he got an apprenticeship in Engineering and worked on the ships for the Army and then applied to the Army where he has worked for two years. He reports that his dad is in prison for rape.

Social History:
James currently lives with his sister, however he is now homeless after an argument with this sister earlier today. He reports he is on extended sick leave/compassionate leave from the Army. He reports that he is based in Catterick and has never been deployed. He recently separated from his partner who is due a baby in eight weeks.

Past Medical History:
Alcohol excess. Gastritis caused by chronic alcohol. Scarring of the liver due to chronic alcohol use.

Past Psychiatric History:
James reports that he was diagnosed with ADHD at the age of 4, however this was through in Glasgow and we have no record of this. He reports several overdoses in the past.

Forensic History:
James has been in prison as a teenager for theft and for carrying a knife.

Drug History:
Omeprazole.

Alcohol & Drug Use:
James is currently drinking three bottles of buckfast daily which he has been doing for the last six months. He reports that he drinks this four to five days of the week. He reports that he vomits if he does not have alcohol. He started to smoke cannabis occasionally 18 months ago and 3 months ago he has increased his cannabis use to daily, however he is unable to quantify exactly how much he is using.

On admission I found James to be appropriate dressed, unshaven but had reasonable eye contact. His speech was quiet and monotone but no evidence of formal thought disorder. In terms of his mood objectively I found him to be dysthymic with a blunted affect. In terms of abnormal thoughts he described some features of PTSD related to a sexual abuse claim seven years previously. He also reports that he is paranoid of others but denies any real auditory or visual hallucinations. His insight was intact.

Progress on the Ward:
James was a patient on the ward for approximately one week. During this time he failed to engage with activities on the ward and was found to be drinking alcohol and smoking cannabis whilst an inpatient. In addition to this whilst an inpatient and under the influence of alcohol James took a Paracetamol overdose that required him to be transferred to the Medical ward for treatment with N-Acetylcysteine.

Cont./...

It also transpired through the course of his stay that much of the history James had given on admission was doubtful. His sister reported that his mother had not in fact died and was still very much alive. She also reported that James is not in the Army and never had been in the Army. James also gave several contradictory pieces of information regarding his time in the Army and the abuse as a child and it was unclear exactly what was true and what was not true.

James was eventually discharged with a referral to the Moving Into Health Team, a referral to Alcoholics Anonymous and suggested to him that he could self-refer to the Combat Stress Team regarding the distress he was being caused about his time in the Army. Initially, the plan had been for James to be reviewed in the outpatient clinic a week following discharge, however James re-attended A & E on three to four occasions with suicidal ideation and requesting admission in the days following admission. Each time he underwent further psychiatric assessment and he was reassured that admission was not required as it failed to keep him safe and was in fact detrimental. Each time he was advised to engage with the Moving Into Health Team as well as Alcoholics Anonymous, however James reported that he now plans to move to Glasgow to live with his brother and therefore would not like follow up here. Should James stay in the area and you feel that he requires further psychiatric assessment, please do not hesitate to re-refer him.

Yours sincerely

Dr Laura Tweedie

6	24-7-13	Chlordiazepoxide	10mg	Oral				√ *	

PRESCRIBE **On main prescription sheet:** chlordiazepoxide according to reducing dose chart
and chlordiazepoxide 10 or 20mg as required (including maximum dose in 24 hours); review use daily

CONSIDER	**Prophylaxis of Wernicke-Korsakoff syndrome:**	1 pair IM or IV ampoules Pabrinex® daily for 3 days
	Treatment of Wernicke's encephalopathy:	1 pair IM or IV ampoules Pabrinex® twice daily for 2 days If symptoms respond ⇒ continue 1 pair ampoules daily for a further 3 days If no response ⇒ discontinue and consider referral to a neurologist
OR	**If no indication for parenteral supplementation:**	Thiamine orally 100mg three times daily for 5 - 7 days, then review

Please see reverse for further guidance on use of vitamins

GUIDELINES ON THE USE OF VITAMINS FOR PATIENTS REQUIRING ALCOHOL DETOXIFICATION

Alcohol dependent patients are at risk of developing **Wernicke-Korsakoff syndrome** due primarily to severe deficiency of the water-soluble vitamin B_1 (thiamine). Vitamin supplementation should be considered in **all** patients requiring alcohol detoxification. There is considerable doubt regarding the effectiveness of oral vitamin replacement because of limited absorption. It has also been shown that oral supplementation has little or no effect on CNS vitamin status, whereas parenteral replacement is rapidly effective.

DETECTION OF "AT RISK" PATIENTS

Clinical pointers to an increased risk include recent diarrhoea, vomiting, poor diet, other physical illness or signs of weight loss or malnutrition. The patient has probably been consuming more than 20 units of alcohol per day.
Prophylactic doses of high potency vitamins (Pabrinex®) **must** be prescribed.
(see overleaf)

DIAGNOSIS OF WERNICKE'S ENCEPHALOPATHY

A diagnosis of Wernicke's encephalopathy should be considered if a patient undergoing detoxification has **any** of the following signs: confusion; ataxia; ophthalmoplegia/nystagmus; memory disturbance; hypothermia and hypotension; coma/unconsciousness.
Treatment doses of high potency vitamins (Pabrinex®) **must** be prescribed.
(see overleaf)

USE OF ORAL VITAMINS

Absorption of oral vitamin B_1 (thiamine) appears to be independently reduced by both alcohol and malnutrition. Nevertheless, some thiamine may be absorbed and oral thiamine should be considered on an individual basis.
The recommended dose of thiamine is 100mg three times a day for 5 - 7 days, then review.

Pabrinex® Intramuscular High Potency (IMHP)

The intramuscular route is preferred and is recommended where muscle bulk allows.

The contents of each pair of ampoules (total 7mL) are drawn up into a syringe to mix them just before use, then injected high into the gluteal muscle, 5cm below the iliac crest. Administer over 3 to 5 minutes, and massage after injection.
Nurses may administer Pabrinex® by the intramuscular route.

Pabrinex® Intravenous High Potency (IVHP)

The preferred method for intravenous administration is by drip infusion. The contents of each pair of ampoules (total 10mL) should be diluted with 50 to 100mL sodium chloride 0.9% and infused over 15 to 30 minutes. Where glucose infusion is clinically indicated, glucose 5% can be used as the diluent. Alternatively the contents of each pair of ampoules (total 10mL) are drawn up into a syringe to mix them just before use, then injected slowly into a vein, over a period of 10 minutes.
If Pabrinex® is to be administered intravenously, a doctor must carry this out.

ANAPHYLAXIS

Repeated injections of preparations containing high concentrations of vitamin B_1 (thiamine) may give rise to anaphylactic shock. Mild allergic reactions such as sneezing or mild asthma are warning signs that further injections may lead to anaphylactic shock.
Parenteral vitamin supplements must only be administered where suitable resuscitation facilities are available and epinephrine (adrenaline) 1 in 1000 (1mg in 1mL) for intramuscular administration is readily available.

Adapted from LPCT Medicines Bulletin No. 8 (December 1999)
Wernicke-Korsakoff Syndrome – A Guideline: The use of vitamins B and C injection (Pabrinex®) for patients admitted for alcohol detoxification.

Livingston,
West Lothian,
EH54 6NU
CHI 1203893450

An Early Warning Score (SEWS) must be calculated every time patient observations are recorded. If SEWS score 4 or more then call the appropriate doctor and nurse in charge using the guidelines below. Increased frequency of observations (minimum hourly) should be commenced and a detailed report in the patient's medical notes should be completed.

Early Warning Score 4 or more
or concern with a patients condition.

↓

Call Junior Doctor & Senior Nurse/Nurse Practitioner
If Dr cannot attend within 20 mins, they should arrange a Deputy.

↓

Practitioner/Dr unable to attend within 20 mins **or** SEWS increased by 2 **or** patient deteriorating.

↓

Call appropriate SHO/Registrar & Senior Nurse/Nurse Practitioner

↓

Dr unable to attend within 10 mins **or** SEWS increased by 2 **or** patient deteriorating.

↓

Call appropriate Registrar/Consultant
Consider ICU referral/review of treatment plan

Early Warning Score 6 or more
or rapidly deteriorating patient.

↓

Call appropriate SHO/Registrar & Senior Nurse/Nurse Practitioner

Persistent Pain – 6 or above and unresponsive to guidelines

↓

Call Medical Staff/Senior Nurse/Nurse Practitioner

↓

For further advice contact:

ACUTE
Mon- Fri: **Bleep Acute Pain Team**
Out of hours: **On-call anaesthetist**

CANCER-RELATED
Mon- Fri: **Bleep Palliative Care Team**
Out of hours: **via switchboard**

Reorder Ref: WLT1016-Rev. 05/07

How to calculate SEWS Score

- **Do not add pain score to SEWS Score.**
- Record standard observations (RR, SpO_2, Temp, BP, HR, AVPU).
- Note whether observation falls in shaded "At Risk Zone". Score as per SEWS key.
- Add points scored and record total "SEWS Score" in bottom row of chart.
- Action as per guidelines on front of chart.

If RR >24	Review patient / CXR +/- gases / PEF (Peak Expiratory Flow) etc → Definitive Therapy			
If SpO_2 sats <93%	Review probe ? accurate Review patient → prescribe oxygen on drug chart if indicated, consider ABGs.			
If Temp >38	Blood cultures Other cultures Early antibiotic therapy if sepsis suspected.			
If Systolic BP<100	Review monitoring *(cardiac / oximetry / urine output / invasive BP etc).* IV Access Review patient / drug kardex.			
Consider:	IV fluid bolus and reassess. TREAT UNDERLYING CAUSE			
Consider:	Hypovolaemia	Obstructive	Distributive	Cardiac
	Dehydration	*PE*	*Sepsis*	*Arrhythmia*
	Blood loss	*Tamponade*	*Anaphylaxis*	*Pump failure*
If Pulse >130	Review monitoring *(cardiac monitor indicated)* IV Access Review patient / ECG / electrolytes → Definitive Therapy			
If responds to pain only or unresponsive	Assess airway, BM, GCS, neuro observation chart, review patient / kardex.			
If BM <4	Give Oral Carbohydrate / IV Dextrose. Consider checking urgent laboratory blood glucose.			

Pain Assessment & Management Guidelines

How to score pain:

Cancer-related pain: **Always** score **worst** pain in last 24 hours or since last assessment.
Acute pain: Score **current** pain on movement e.g. deep breathing

Pain Score:		Action:
0	**NONE**	Continue to assess pain with every set of observations **(must be** at least daily).
1-3	**MILD**	Continue to assess pain with every set of observations **(must be** at least daily).
4-5	**MODERATE**	Assess. Using guidelines, prescribe/give analgesia as appropriate for the patient. Review.
6-10	**SEVERE**	Assess. Using guidelines, prescribe/give analgesia as appropriate for the patient. Review.

PERSISTENT SEVERE PAIN (6 OR ABOVE), WHICH DISTRESSES THE PATIENT: REFER. SEE FLOW CHART OVER.

Lothian Guidelines

Cancer-related pain: Initiate Edinburgh Pain Assessment Tool (EPAT©) for pain score of 4 or above.
Use Palliative Care Guidelines.
Acute pain: Use Acute Pain Guidelines.

Nausea Score (0-3)

0 = **No Nausea**
1 = **Nausea** (consider anti-emetic)
2 = **Nausea/Vomiting** (administer anti-emetic)
3 = **Persistent Nausea &/or Vomiting** (contact Dr).

PERSISTENT NAUSEA &/OR VOMITING: USING GUIDELINES PRESCRIBE/GIVE ANTI-EMETICS. REVIEW.

PRESCRIBERS

1. **USE GENERIC NAME**, write in **BLOCK LETTERS**.*
2. As Required Prescriptions shall include the Symptoms to be Relieved, the Minimum Time Interval and the Maximum Daily Dose.
3. Write doses of less than 1mg as micrograms e.g. 500 micrograms; Units and Nanograms should be written in full.
4. When a prescription line is completed a new chart should be written. Additions, overwriting and continuation on a lower part of the chart are **NOT** allowed.
5. Discontinue a medicine by clearly crossing out the prescribing side and administration record, **SIGN** and **DATE** discontinuation.
6. Medicine Sensitivities box should be completed and signed by Authorised Staff.
7. Verbal orders must be countersigned by the prescriber within 24 hours or the prescription will lapse.
8. Only **APPROVED** abbreviations should be used on this chart.
9. **All prescribers should ensure they are familiar with their responsibilities as set out in the NHS Lothian Safe Use of Medicines Policy.**

NURSES

1. Check ward name, patients name and CHI number are filled in correctly.
2. Check entries in every section to avoid omissions.
3. Nurses initials should be recorded in **BLOCK LETTERS**.
4. When a medicine is not given, then the reason for omissions should be recorded in the administration boxes as per codes on front of Medicine Chart.
5. Administration should be carried out in accordance with NMC Guidelines (as amended) and the **NHS Lothian Safe Use of Medicines Policy.**

* *Remember that certain medications should be prescribed by brand name e.g. Lithium, Diltiazem. Refer to BNF for advice.*

Dear Dr Walker

RE: JAMES WEIR, 35 PYOTHALL COURT, BROXBURN EH52 6GX
DATE OF BIRTH: 12.03.89

Thank you for referring this patient for review by Liaison Psychiatry. I saw Mr Weir in Ward 9 on 29 July 2013. I subsequently discussed his case with Dr Kennedy, Consultant Liaison Psychiatrist, who suggested the following Impressions and Management Plan.

Impressions

1. Impulsive overdose of 32 Paracetamol tablets, 10 x 5mg Diazepam tablets and half a gram of Amphetamine shortly after being reviewed by psychiatry.
2. Recent discharge from Ward 17. Admission was not thought to be helpful as Mr Weir continued to use drugs and alcohol and took an overdose whilst being an inpatient.
3. Previous overdoses.

Suggested Management Plan

1. Home when medically fit.
2. Follow up as previously arranged. A referral has been made to "Moving Into Health".

Mr Weir is a 24 year old man who was admitted to hospital after taking an overdose of 16mg of Paracetamol, 50mg of Diazepam and half a gram of Amphetamine shortly after being reviewed by psychiatry with suicidal ideation. Mr Weir told me he took the overdose as it was the only way he could let his emotions out and that he wanted to end the pain in his life but he did not want to die. He recently had a short admission to Ward 17 but the ward environment was not thought to be helpful to him as he had continued to use alcohol and drugs and had taken a Paracetamol overdose whilst an inpatient on the ward.

Mr Weir has a several year history of low mood and self harm although he has not self harmed for the last 4 months. At my time of assessment he was requesting to be readmitted to Ward 17 and told me that he got in with the wrong people whilst on the ward who he contributed his actions to. He told me that the ward environment would be useful for him to try and get his head sorted and also named other patients from Ward 17 who he told me were also using drugs and alcohol whilst on pass.

Psychiatric History
ADHD
Previous overdoses

Past Medical History
Alcohol excess, alcoholic gastritis, alcoholic liver disease.

Personal and Social History
Mr Weir was born and brought up in Glasgow. He tells me he was physically abused by his mum and was placed on the child protection register and grew up partly in care. He told me he spent time in children's homes between the age of 12 and 16 due to behaviour issues. However, he managed in mainstream school. He tells me he has been in the army for the past 4 years and has served in Iraq and Afghanistan and he told me that he has been referred for combat stress through the army. He tells me he has been with his current partner for 12 years and they are expecting their first baby in 7 weeks time. His partner lives in Glasgow. Mr Weir lives alone in a council house in Broxburn. He is currently on sick leave from the army due to mental health issues. He has previously been in prison as a teenager for theft and carrying a knife. Mr Weir tells me he is drinking either 5 bottles of Buckfast a day or one litre of vodka a day and tells me that he gets withdrawal symptoms on cessation of drinking. He smokes Cannabis occasionally telling me the last time was around 2 weeks ago. He smokes 10 cigarettes per day.

Mental State Examination
Mr Weir was a 24 year old Caucasian gentleman with multiple tattoos and a missing front tooth. He was appropriately dressed at my time of assessment and maintained reasonable eye contact and rapport. His speech was normal and there was no evidence of thought disorder. Subjectively he described his mood as upset and frustrated and objectively although he seemed low in mood, he had a reactive affect. He described difficulties with his sleep and appetite and tells me he has lost 3 stones over the last 6 months. He denied any visual or auditory hallucinations and cognitively he was orientated to time, place and person.

There were inconsistencies in Mr Weir's personal history between what he told nursing staff and different members of the medical team. This was also the case during his recent admission to Ward 17. It was not felt that the ward environment was beneficial for Mr Weir and that he is best managed with support in the community, including a referral to "Moving Into Health" which was made whilst he was an inpatient. Mr Weir was very frustrated that he was not able to be admitted to the ward on this occasion and told me he would speak to his army medical officer about the situation. I have discussed the above with Dr Kennedy who agreed that further admission was unlikely to be beneficial and Mr Weir should be discharged from hospital once he was medically fit. Should you require any further information, please do not hesitate to contact me.

Yours sincerely

Dr A Nimmo

Dear Dr Pepper

RE: JAMES WEIR 28 PEVRIL RISE DEDRIDGE EH54 6NU
DATE OF BIRTH: 12.03.1989

Diagnosis
Alcohol dependence

Medication
Thiamine 300 mg
Vitamin B Co-strong 2 tablets tds

Plan
Discharge from psychiatry

James was brought to OPD5 for psychiatric assessment by the police on the 7th August 2013. He was picked up the previous night intoxicated and saying he was suicidal. He was brought to St Johns Hospital for assessment but was too drunk and so spent the night in the cells. Jams recalled little of the yesterday's event as he had started drinking early in the morning. He couldn't tell me how much or how he ended up at the police station saying he was police officer. James was quick to acknowledge that he had an alcohol problem and *"it has to be me that stops"*. Following his discharge from the ward it seems that he has engaged with all the services that he was encouraged to. He attends AA meetings on a Saturday morning and Sunday evening and feels they this has been supportive. He has an appointment next week with Combat Stress. He has an appointment later today with CPN Lorraine McLean from Moving into Health. He told me he didn't agree with the drugs, but admitted that he had smoked Cannabis on the ward when I had put this to him. He said that he had got in with the wrong crowd. I put it to him that in the notes there was a query about whether or not he was telling the truth about his mother's death from cancer. He explained that his sister had told the staff on the ward that she wasn't dead because she is a *"shit stirrer"*. He explained that his sister wanted him discharged from the ward so he could help her look after her four year old. He describes her ripping out his venflon and phoning the police on him. He explained that she told the police he had broken into her house, but she had given him the key. James says he now wants nothing to do with her and plans to eventually return to Glasgow to be with his family there. He says his fiancée is due to have his baby in four weeks and he wants to be a part of this baby's life. James appeared to take responsibility for his health and wants desperately to stop drinking. He feels he has a lot to lose

and told me he plans to address his drinking problem. I found no evidence of depression or of a mental illness. He had no thoughts of harming himself or of ending his life. I have not arranged further psychiatric follow up.

Yours sincerely

Dr Amal Al Sayegh

Dear Dr Pepper

RE: JAMES WEIR, 35 PYOTHALL COURT, BROXBURN. EH52 6GX
DOB/CHI 12/03/89 3450

Date & Venue:
13th August 2013. Medical Assessment Unit, St John's Hospital.
Dr Sarah Kennedy, Consultant Liaison Psychiatrist.

Purpose of Review:
Admitted on the previous night intoxicated having taken a spontaneous overdose of 30 tablets of Paracetamol. Found by a passerby in the street, she called an ambulance.

As you know we have seen James a number of times following impulsive overdoses recently. His underlying issue is clearly alcohol. He has an appointment to see WLDAS on 19th August 2013 and told me he fully intended to keep this appointment. He had no plans prior to the events of yesterday to overdose but was intoxicated in the pub, bought Paracetamol and took them on the way home. He tells me he must have been found by a passerby who called the ambulance. When I reviewed him today he told me he felt like "a dick", he had plenty to be focussing on including the birth of a baby in 4 weeks to his girlfriend. He also has plans to move through to Paisley within the next 2 weeks to be closer to his immediate family. His acceptance of his alcohol issues is changeable, it range during today's assessment from stating he realises he is placing alcohol above other responsibilities whilst in the same vein telling me that he can take or leave alcohol and he is not alcohol dependent. I therefore spent some time going through his notes with him to highlight both the physical, mental and social effects his drinking is having. He volunteered there was a counsellor in Irvine who has seen him in the past who he plans to make contact with when he moves through. There was no evidence of any mental health disorder today, I therefore discharged him with WLDAS follow-up.

Kind regards.

Yours sincerely

Dear Dr ,

Re – James Weir, 35 Pyothall Court, Broxburn,West Lothian
D.O.B- 12/03/1989

I am writing to advise you that I have no further appointments to meet with James. I provided him with information re NHS Addictions and encouraged him to seek help re his alcohol abuse. He had a fire in the above temp tenancy whilst being heavily intoxicated. He DNA'd his last appointment with me. I have since found out he has presented as homeless in Paisley and he has moved outwith the area. I have decided to discharge him from my caseload.
If I can be of any further assistance, please do not hesitate to contact me.
Yours sincerely
