**04-Feb-2021 Dr Graeme Sim Telephone call to a patient**

Administration Telephone encounter States he DNA neuro appt in QUEH and that he was told he missed botox appt, and that he requires re-referral - states he has correspond re: this - not clear if to re-refer QUEH or to Lanarkshire for botox. States the issue arose as he did not have credit on his phone to call QUEH to advise them that he could not attend the QUEH appt/also he did not call re: mentally not feeling good. Advised him that there is no correspond re: the above - advised him to contact QUEH to see if appt can be reinstated and to fwd his correspond to the practice, and request QUEH to send correspond to the practice. States he has no credit on his phone - asked him how he arranged this appt - states his \*\*\*\*\* did - therefore asked could his \*\*\*\*\* phone not be used to contact QUEH - he became angry and hung up. On recalling, mob rang, then appeared to be cut off, and no answer when called him again.

**13-Mar-2020 Mrs Jean Mcconville Administration**

Administration SMS text message sent to patient CORONAVIRUS (COVID-19) DO NOT ATTEND the Kilbryde Practice. Please telephone the practice on \*\*\*\*\* All calls will be triaged. If you are concerned about Coronavirus (COVID-19), please follow the link below:

## Test Requests

31-Dec-9999 Dr M Locum 1

Laboratory test requested

Remote Test request from Technidata system: NHSL-Blood science Clinical Information: Priority: non-urgent, Ordered from: AHSL Labs, No samples collected Test: Full Blood Count, Status: Requested, Updated: 26/04/2022 Test: B12/ Folate, Status: Requested, Updated: 26/04/2022 Test: Urea & Electrolytes, Status: Requested, Updated: 26/04/2022 Test: CRP, Status: Requested, Updated: 26/04/2022

Status

Innoculation Risk False

Priority Routine

Has Fasted? False

Is Pregnant? False

## Test Results

09-Jan-2025 Dr Louise Simmons

Result: BCSP faecal occult blood test normal No action required

Negative

BCSP faecal occult blood test normal No action required

(No range available)

02-Feb-2023 Dr Louise Simmons

Result: BCSP faecal occult blood test normal No action required

Negative

BCSP faecal occult blood test normal No action required

(No range available)

26-Apr-2022 Dr Helen Mcneil

Result: Urine culture <none>

Urine culture <none>

(No range available)

26-Apr-2022 Dr Helen Mcneil

Result: Sample: organism sensitivity Sample Organism Sensitivity - Comment: dysuria, flank pain, renal hx. Sample Type MSU Culture . Culture ..... No Growth Request status Completed request.

Sample: organism sensitivity Sample Organism Sensitivity - Comment: dysuria, flank pain, renal hx. Sample Type MSU Culture . Culture ..... No Growth Request status Completed request.

(No range available)

26-Apr-2022 Dr Peyman Jamshidi

Result: Serum chloride

Serum chloride

104 mmol/L

(Range: 95 - 108)

26-Apr-2022 Dr Peyman Jamshidi

Result: Serum creatinine

Low

Serum creatinine

59 umol/L

(Range: 60 - 120)

26-Apr-2022 Dr Peyman Jamshidi

Result: Serum potassium

Serum potassium

4.2 mmol/L

(Range: 3.5 - 5.3)

26-Apr-2022 Dr Peyman Jamshidi

Result: Serum sodium

Serum sodium

141 mmol/L

(Range: 133 - 146)

26-Apr-2022 Dr Peyman Jamshidi

Result: Serum urea level

Serum urea level

6.5 mmol/L

(Range: 2.5 - 7.8)

26-Apr-2022 Dr Peyman Jamshidi

Result: Urea and electrolyte tiredness

Urea and electrolytes tiredness

(No range available)

26-Apr-2022 Dr Peyman Jamshidi

Result: Plasma C reactive protein tiredness

Plasma C reactive protein tiredness

mg/L

(No range available)

26-Apr-2022 Dr Peyman Jamshidi

Result: Plasma C reactive protein

Plasma C reactive protein

6 mg/L

(No range available)

26-Apr-2022 Dr Peyman Jamshidi

Result: GFR calculated abbreviated MDRD Estimated EGFR - ml/mn/1.73m2

GFR calculated abbreviated MDRD Estimated EGFR - ml/mn/1.73m2

59 mL/min/1.72m<sup>2</sup>

(No range available)

26-Apr-2022 Dr Peyman Jamshidi

Result: Serum vitamin B12 B12 deficiency unlikely.

Serum vitamin B12 B12 deficiency unlikely.

366 pg/mL

(Range: 197 - 771)

26-Apr-2022 Dr Peyman Jamshidi

Result: Eosinophil count x 10<sup>9</sup>/L

Eosinophil count x 10<sup>9</sup>/L

0.2 10<sup>9</sup>/L

(No range available)

**26-Apr-2022 Dr Peyman Jamshidi**

**Result:** Serum folate *Note normal Folate result, however there is slight haemolysis in the sample, therefore the reported result may be falsely elevated and Folate deficiency cannot be ruled out.*

Serum folate *Note normal Folate result, however there is slight haemolysis in the sample, therefore the reported result may be falsely elevated and Folate deficiency cannot be ruled out.* 5.06 ng/mL (Range: 3.9 - 26.8)

**26-Apr-2022 Dr Peyman Jamshidi**

**Result:** Haemoglobin estimation *\*\* Please note Haemoglobin and MCHC units have changed to g/L \*\**

Haemoglobin estimation *\*\* Please note Haemoglobin and MCHC units have changed to g/L \*\** 144 g/L (Range: 135 - 180)

**26-Apr-2022 Dr Peyman Jamshidi**

**Result:** Mean corpusc. haemoglobin (MCH)

Mean corpusc. haemoglobin (MCH) 31 pg (Range: 27 - 32)

**26-Apr-2022 Dr Peyman Jamshidi**

**Result:** Mean corpusc. Hb. conc. (MCHC)

Mean corpusc. Hb. conc. (MCHC) 360 g/L (Range: 320 - 360)

**26-Apr-2022 Dr Peyman Jamshidi**

**Result:** Mean corpuscular volume (MCV)

Mean corpuscular volume (MCV) 86 fL (Range: 80 - 100)

**26-Apr-2022 Dr Peyman Jamshidi**

**Result:** Monocyte count  $10^9/L$

Monocyte count  $\times 10^9/L$  0.6  $10^9/L$  (Range: 0.2 - 0.8)

**26-Apr-2022 Dr Peyman Jamshidi**

**Result:** Neutrophil count  $10^9/L$

Neutrophil count  $\times 10^9/L$  5.3  $10^9/L$  (Range: 2 - 7.5)

**26-Apr-2022 Dr Peyman Jamshidi**

**Result:** Platelet count  $10^9/L$

Platelet count  $\times 10^9/L$  305  $10^9/L$  (Range: 140 - 450)

**26-Apr-2022 Dr Peyman Jamshidi**

**Result:** Red blood cell (RBC) count  $10^{12}/L$

Red blood cell (RBC) count  $\times 10^{12}/L$  4.65  $10^{12}/L$  (Range: 4.5 - 6.5)

**26-Apr-2022 Dr Peyman Jamshidi**

**Result:** Total white blood count  $10^9/L$

Total white blood count  $\times 10^9/L$  8.6  $10^9/L$  (Range: 4 - 11)

**26-Apr-2022 Dr Peyman Jamshidi**

**Result:** Percentage lymphocytes  $10^9/L$

Percentage lymphocytes  $\times 10^9/L$  2.4  $10^9/L$  (Range: 1 - 4)

**26-Apr-2022 Dr Peyman Jamshidi**

**Result:** B12/folate level *tiredness*

B12/folate level *tiredness* (No range available)

**26-Apr-2022 Dr Peyman Jamshidi**

**Result:** Full blood count - FBC *tiredness*

Full blood count - FBC *tiredness* (No range available)

**26-Apr-2022 Dr Peyman Jamshidi**

**Result:** Haematocrit

Haematocrit 0.4 L/L (Range: 0.4 - 0.54)

**26-Apr-2022 Dr Peyman Jamshidi**

**Result:** Basophil count *Basophils -*  $\times 10^9/L$

Basophil count *Basophils -*  $\times 10^9/L$  0  $10^9/L$  (No range available)

**26-Apr-2022 Dr Peyman Jamshidi**

**Result:** Red blood cell distribution width

Red blood cell distribution width 12.5 % (Range: 11 - 16)

**26-Apr-2022 Dr Peyman Jamshidi**

**Result:** Differential white cell count *Differential white cell count -*

Differential white cell count *Differential white cell count -* (No range available)

**11-Feb-2021 Dr Louise Simmons**

**Result:** BCSP faecal occult blood test normal *No action required*

Negative

BCSP faecal occult blood test normal *No action required* (No range available)

**11-Feb-2021 Dr Louise Simmons**

**Result:** BCSP faecal occult blood test normal *No action required*

Negative

BCSP faecal occult blood test normal *No action required* (No range available)

**16-Oct-2019 Dr Graeme Sim**

**Result:** Serum iron level *il*

Serum iron level *il* umol/L (No range available)

16-Oct-2019 Dr Graeme Sim

Result: Serum iron level

Serum iron level

21 umol/L

(Range: 12 - 31)

16-Oct-2019 Dr Graeme Sim

Result: Serum TSH level mU/L

Serum TSH level mU/L

2.53 mU/L

(Range: 0.27 - 4.2)

16-Oct-2019 Dr Graeme Sim

Result: Thyroid hormone tests/

**CLINICAL INFORMATION****History of presenting complaint / examination findings / investigation results****Presenting complaint**

Main presenting  
Complaint: Pain/swelling/paraesthesia

Reason for  
Referral: This 49 year old gentleman has had ongoing pain in his right hand and foot, and more recently, he complained of swelling in his right fingers and toes, with long term paraesthesia in both hands and legs.

On examination there was swelling in the fingers of his right hand, otherwise locomotor and neurological examination was normal. Relevant blood tests were satisfactory apart from T4 at 11.8, urea 8, cholesterol 6.6, urate 365, ferritin 514, and ANA positive 1/80.

Given his ongoing problems as above, I would be grateful for your assessment. In the meantime, I discussed general advice with him and his abnormal blood results will be followed up as appropriate.

Thank you.

Dear Dr. B Cooper,

**Mark McCormack; D.O.B: 17 May 1970; CHI: 1705705154**  
**46 Livingstone Drive, East Kilbride, Glasgow, G75 0EL**

Attendance: Specialty - Neurology; Clinic - SGATNE3-DR TYAGI HEADACHE TUE AM  
Date and Time of Appointment - 18/07/2017 12:30

**Follow Up:** Occipital nerve block booked.

### Clinical Comments:

Mr McCormack attended the headache clinic. He has suffered with headaches for the last eight years and gets these up to five days a week. He gets more than 15 days overall of headache in a month and the severe headaches are bothering him to a great extent. He can wake up with these throbbing pains and his stomach feels like a washing machine. He gets nauseous and sick as well as light sensitivity and the headaches can persist for six to seven hours. They tend to be generalised around his eye, back of the head and temple and he also gets a shooting pain on occasion. He has tried Propranolol, Topiramate and Amitriptyline, Pizotifen, Gabapentin and Pregabalin as well as Sumatriptan tablets which have not really helped him. He has attended Dr Greene, Consultant Neurologist in the past and also seen Mr Grivas, Consultant Neurosurgeon for an arachnoid cyst which has been checked on his MRI scans over the last few years and has not changed in size. He is currently on no medication. He is a Sound Engineer and lives by himself. We had a discussion regarding his headache disorder and I have said to him that, in my opinion, the arachnoid cyst is not contributing to his headaches and that I would recommend that he be tried on a couple of other migraine preventative treatments and should they not help then perhaps injectable treatments could be considered. I have therefore given him a prescription for Flunarizine, an on licence calcium channel blocker available from the headache clinic and he should try that in a dose of 10mg for at least a six week time period and should that help him perhaps persist for longer. Should this not help or give him side effects, he may wish to use Candesartan 4mg to 12mg a day. I would also suggest that he be tried on Sumatriptan 6mg subcutaneous injections on a PRN basis for his severe headache disorder. Should none of these measures help, an occipital nerve block could be considered and I have arranged for an appointment for the same for him. Thank you for your referral. Yours sincerely, Dr Alok Tyagi Consultant Neurologist

Dear Dr Simmons

**Re: Mark McCormack d.o.b. 17 05 1970 CHI No. 170570 5154**  
**47 Murdoch Road, East Kilbride G75 0JN**

Thank you for referring the above client to East Kilbride Psychological Therapies Team on 25 February 2011. We met on 03 October 2011 at Strathmore House, East Kilbride.

**Assessment**

Mr McCormack was referred due to depression and anxiety but he stated that his mood has improved and felt his problems were situational.

During assessment he completed the Hospital Anxiety and Depression Scale (HADS) and scored 9 for anxiety and 7 for depression, indicating no significant depression and mild anxiety. Mr McCormack is a single [redacted] and is unemployed. He said he has been getting headaches every day for the past seven – eight months. He said it was the headaches and his living situation, where he shares his one bedroom flat with his two children, which were the main problems and he did not have a "psychological problem". As such, Mr McCormack was unsure how a Psychological approach would help, although he wondered if his headaches could be related to stress.

I directed Mr McCormack to some self-help resources on the Lanarkshire Mental Health website and gave him some information on stress and relaxation. Mr McCormack felt this may be sufficient, but I have offered him a place on a Stress Management Group should he wish more support.

This client has been offered group treatment utilising a Cognitive Behavioural Therapy approach. I will keep you informed of his progress but if you require any further information in the meantime, then please do not hesitate to contact me.

Yours sincerely

*E. Purvis*

Consultant:

Dear Neurology

**Patient Name:** Mark McCormack  
**Patient date of birth:** 17/05/1970  
**Patient Address:** 46 Livingstone Drive, East Kilbride, Glasgow, G75 0EL

I had a telephone consultation with this patient who was previously investigated for a possible rheumatic disease. His symptoms continue to be in the neurological spectrum. He reports widespread pins and needles which used to be mostly on his legs or forearms and now he feels them all over his body. He also has headaches at times. He has a history of large middle cranial fossa arachnoid cyst and had the last MRI in 2015.

He has no CTD related symptoms. His immunology showed ANA 1/160 speckled with negative ENA, negative ANCA, negative CCP and negative rheumatoid factor. His inflammatory markers were normal.

Following our discussion today and his previous investigations my impression is that this patient does not have rheumatic disease and I see that he had a plan to be reviewed by Neurology. I am copying my letter to the Neurology department as the patient feels that he is experiencing more headaches and paraesthesia for which he would most likely benefit from a review.

I am discharging him from Rheumatology however if in the future you feel that he is developing a rheumatic or autoimmune or inflammatory disease please consider re-referring.

Yours sincerely

**Dr Georgiana Young**  
**Consultant Rheumatologist**

### VARENICLINE (CHAMPIX®) PRESCRIPTION REQUEST

I am an Independent Prescriber working with NHS Lanarkshire in Boots chemist, the plaza, East Kilbride.

One of your patients

NAME Mark McCormack, 46 Livingston DATE OF BIRTH: 13.5.79  
..... is attending an stop smoking clinic run by the pharmacists in the pharmacy. Following discussion, and after a failed NRT attempt, your patient has requested to use varenicline (Champix®). I should be grateful if you would assess his suitability for this medication based on their past medical history. Some of the potential side effects of the drug have been discussed.

Should you agree, I would be willing to prescribe varenicline for the twelve weeks of the course, in accordance with the attached Clinical Management Plan (Appendix 1) I have I would be obliged if you could complete and return as soon as possible so I can initiate the varenicline. I will update you on their progress.

Many thanks for your assistance.

Yours sincerely

[REDACTED]

Confirmation:

TO: [REDACTED] Boots chemists, 33-37 the Plaza East Kilbride

The above patients notes have been reviewed and I

- Confirm that the patient has no contraindications to varenicline

Have noted that varenicline will be provided by Boots pharmacy for up to three months

Dear Dr. B Cooper,

**Mark McCormack; D.O.B: 17 May 1970; CHI: 1705705154**  
**46 Livingstone Drive, East Kilbride, Glasgow, G75 0EL**

Attendance: Specialty - Neurosurgery; Clinic - SGAGNS0-MR GRIVAS NSURG FRIDAY PM  
Date and Time of Appointment - 10/02/2017 13:45

**Clinical Comments:**

I have reviewed Mr McCormack in the Neurosurgery outpatient's clinic with the results of the CT scan brain from 28/12/16. The scan has shown a static appearance on the left sylvian type temporal arachnoid cyst. Mr McCormack admits to intense and quite frequent headaches during the course of the day but he is not keen to undergo invasive ICP (intracranial pressure) monitoring. We have also discussed the management of arachnoid cysts should they become symptomatic in relation to the CSF diversion or communicating those cysts to the basal cisterns.

I have referred Mr McCormack to Dr Tyagi's headache Neurology clinic in December 2016 as Mr McCormack would prefer to be seen by the headache Neurologists. On today's assessment fundoscopy on the right side did not reveal papilloedema. This was not feasible to view on the left side as he has likely scarring from detached retina.

I have not made any further plans to review Mr McCormack in my clinic but in future if the Neurologists raise concerns and the patient agrees I would be happy to see Mr McCormack and proceed with appropriate investigations.

Yours sincerely,

Mr A. Griyas

32841099 06/01/2014 XR Chest

Clinical History: Chest pain.

Heart size is within normal limits.

No evidence of active pulmonary disease.

Both hila are slightly prominent this is thought to be vascular.

A more dense round opacity is noted in relation to the left hilum again this is thought to be vascular.

Suggest repeat chest x-ray initially

Procedures:

### Clinical Progress and Investigations:

This patient was admitted with a 2 week history of left loin pain. A CT KUB showed a 9 mm stone at the left PUJ. A 26 French JJ stent was inserted under general anaesthetic. The patient was discharged home with stent in place, pain-free and comfortable. He will be reviewed at the OP Clinic by Miss Ramsay to discuss further management of this stone.

Drugs on Discharge:

Follow-up: Miss Ramsay OP Clinic

Yours sincerely

Mr David Hickey  
Locum Consultant Urologist

**CLINICAL INFORMATION****History of presenting complaint / examination findings / investigation results****Presenting complaint**

Main presenting Complaint: Not Specified

Reason for Referral: This 45 year old gentleman presented with an episode of frank haematuria, along with various symptoms that may relate to the urinary tract, so I would be grateful if you could see him for assessment.

He said he developed pain behind his right testicle on the day prior to his appointment, that radiated up to his right abdomen in to his right upper quadrant where he developed a painful "lump". He went to bed, the pain resolved on waking on the day of his appointment, then he developed similar problems on his left side, followed by frank haematuria x 1. He has a long history of terminal dribbling, otherwise he has no lower urinary tract symptoms.

He was investigated by gastroenterology in 2014, when it was documented that he had multiple symptoms contributing to an overall fatigue condition, for which multiple investigations were negative and he was advised to address these in the form of stress counselling techniques, and he was given contact details for stress control classes available through the NHS locally. He did not arrange this and he was given the details again, with a view to trying these classes.

On examination his abdomen was soft, with general abdominal tenderness. There was no inguinal lymphadenopathy or hernia evidence. He had mild bilateral testicular tenderness. He complained of some right groin pain on testing the range of movement of his right hip. He had no ankle oedema or DVT evidence. He declined pr examination to check for evidence of prostatitis etc, and I arranged for him to have relevant bloods tested, an MSSU and prescribed him a one week course of Trimethoprim 200 mg bd along with Buscopan and to review him with the results.

When reviewed his symptoms had resolved. Relevant blood tests including PSA (0.5) were satisfactory and an MSU showed no growth. Microscopy was not performed due to a technical problem.

On discussing the situation with him, he said that he definitely had frank haematuria x 1 and so I would be grateful for your assessment. I advised him to arrange review with a urine sample if he has further problems with frank haematuria.

Thank you for seeing him.

Dear Dr Simmons

**Mark McCormack** ~ 17/05/1970 ~ CHI: 1705705154 ~ CRN: 64062295A  
47 Murdoch Road, East Kilbride, Glasgow, G75 0JN

Just as short note to left you know that Mr McCormack has failed to attend the Clinic on two successive occasions. I have not arranged any further review but would be happy to do so if you think this is necessary.

Yours sincerely

Dr Prem Venkatesh  
Locum Consultant Ophthalmologist

Dear Dr. B Cooper,

**Mark McCormack; D.O.B: 17 May 1970; CHI: 1705705154**  
**46 Livingstone Drive, East Kilbride, Glasgow, G75 0EL**

Attendance: Specialty - Neurology; Clinic - SGORNE4-NURSE RANKIN NEURO TUES PM  
Date and Time of Appointment - 31/10/2017 13:00

### Clinical Comments:

Mr McCormack attended the greater occipital nerve injection clinic for his daily headaches.

He continues on his candesartan 16mg daily with no side effects.

We proceeded to inject him on the left side using depo medrone 80mg and lidocaine 20mg/2ml There were no complications and we have requested a routine appointment in approximately 4 months.

Yours sincerely

McCorkell

Headache Nurse Specialist

# NHS WAITING LIST INITIATIVE

JG/KC/3440331

Dictated: 24.09.15

Typed: 01.10.2015

Dr Simmons  
Hunter Health Centre  
Andrew Street  
East Kilbride  
G74 1AD

Dear Dr Simmons

Mark McCormack DOB: 17.05.70

Tel No: [REDACTED]  
46 Livingston Drive, East Kilbride, Glasgow G75 0EL

This man attended for review. He is still troubled with daily headaches, worse in the morning. He has had a left eye injury. On examining the right optic I thought that the disc margin was a little indistinct but a small amount of pressure to the orbit caused the pains to collapse suggesting pressure was not raised.

His left sided arachnoid cyst is large and I think it may well be contributing to his headache. I think he merits a neurosurgical referral and I will make this referral. Patient was a little ambivalent about the prospect of neurosurgery. I think it would be best that he meets with a neurosurgeon and we can take matters from there.

Yours sincerely

Dr John Greene  
CONSULTANT NEUROLOGIST

32477386 27/06/2013 US Abdomen

Clinical History: Abdominal pain. Left hypochondrial pain and tenderness. Abdominal distension.

No significant abnormality is demonstrated within the liver or biliary tree. Thin-walled gallbladder; no evidence of calculi. Common bile duct measures 4 mm. No significant abnormality is demonstrated within the spleen, aorta or either kidney. No obstructive uropathy or obvious calculi demonstrated bilaterally. The pancreas could not be assessed due to overlying bowel gas. No free fluid.

Consultant:

Dear Dr Simmons

Patient Name: Mark McCormack

Patient date of birth: 17/05/1970

Patient Address: 46 Livingstone Drive, East Kilbride, Glasgow, G75 0EL

**Situation**

New GP referral Gastroenterology with poly symptomatology and raised ferritin

**Background**

CT head April 2014 shows no significant changes since 2011 with a left middle fossa developmental arachnoid cyst with associated temporal lobe dysgenesis  
Chest x-ray January 2014 clear  
Abdominal ultrasound June 2013 NAD

**Assessment**

I reviewed this 43 year old self employed sound engineer in the clinic today who describes multiple symptoms which have escalated over the last three years. He has always had a very stressful lifestyle: being one of the carers for his [REDACTED] who has myasthenia gravis and multiple other health complaints; difficult family circumstances where he sees his [REDACTED] only on weekends; and previous history of multiple illicit drug misuses including solvents and cannabis but never intravenous drugs. He says he stopped all of these ten years ago but does continue to smoke at least 25 roll ups of tobacco a day along with two bottles of wine every other night at least.

He has tried various different medications from your practice and is currently on two months of 720 mg Amitriptyline and Mefenamic acid prn with no significant relief in symptoms. These include predominantly a morning headache which is a sensation of generalised pressure which lasts all day, is much worse with stress but tends to be practically absent if he is distracted for example on his weekends when he looks after his young [REDACTED].

This symptom is also better with alcohol which is therefore escalated as a consequence. He also tends to wake with a feeling of dread which spreads across his abdomen but does tend to sleep normally. He feels he lacks motivation to do anything. He used to be an avid sportsman with [REDACTED] walking, skateboarding, snowboarding and jitsu amongst his hobbies but he now gets headaches even if he just goes swimming.

He has tried to address this and withdrawn from his primary role as his [REDACTED] which is now done by his [REDACTED] but seems to have developed a vicious cycle where he is constantly worrying about his symptoms and convinced that if we can diagnose the cause of these then this will be the only thing to break this cycle.

**Recommendation**

I explained to him today that I think there is no organic basis for his symptoms at present given the multiple negative and extensive investigations you have already performed and the main cause of these complaints is stress and the associated coping mechanisms such as escalating alcohol misuse.

He did seem to take this onboard and seemed to be interested in various counselling courses or mindfulness techniques that I suggested to him and I will write to him with further details of these. In the meantime I strongly suggested that he does anything in his power to cut down and stop his smoking and alcohol misuse and I do not plan any further investigations or follow up in the hospital.

I have taken routine blood tests today to include TTG (results normal, TTG awaited) and I think the raised ferritin is due to escalating alcohol.

Yours sincerely

Dr [REDACTED] Nowell MRCP

Gastroenterology Specialty Doctor

Dear Dr Simmons

Patient Name: Mark McCormack  
Patient date of birth: 17/05/1970  
Patient Address: 46 Livingstone Drive, East Kilbride, Glasgow, G75 0EL

Following this gentleman's Gastroenterology clinic appointment I have the results of the TTG antibody that was sent. This was normal at 0.8 excluding coeliac disease. Therefore he should be managed as described in my clinic letter and discharged from routine Gastroenterology follow up.

Yours sincerely

Dr Emma Nowell MRCP  
Gastroenterology Specialty Doctor

Dear Neurophysiology Department

**Patient Name:** Mark McCormack  
**Patient date of birth:** 17/05/1970  
**Patient Address:** 46 Livingstone Drive, East Kilbride, Glasgow, G75 0EL

*This patient was seen as part of a waiting list initiative at by Dr Nikalous Dadiras Consultant in Rheumatology.  
All queries should be directed via Medinet on Tel: [REDACTED] Fax: [REDACTED]*

I would be very grateful if you could arrange some nerve conduction studies for this nice gentleman to rule out any possibility of carpal tunnel syndrome.

Many thanks.

Yours sincerely

**Dr Nikalous Dadiras**  
Consultant Rheumatologist (Medinet)

*Authorised on 03/04/2020 08:33:31 by Typist RoseAnn Stewart, on behalf of Nikalous Dadiras.*

Dear Dr Sim,

**Mark McCormack; D.O.B: 17/05/1970; CHI: 1705705154**  
**46 Livingstone Drive, East Kilbride, Glasgow, G75 0EL**

Mr McCormack's repeat MRI brain scan again shows the left middle cranial fossa arachnoid cyst which is unchanged from the previous study. Minor mucosal thickening in several of the paranasal air sinuses but no new findings elsewhere. This is a good result.

Yours sincerely

Dr Alok Tyagi

Consultant Neurologist

Consultant: Doctor Iulia Georgiana Stamate-Young

Dear Dr Sim

**Patient Name:** Mark McCormack  
**Patient date of birth:** 17/05/1970  
**Patient Address:** 46 Livingstone Drive, East Kilbride, Glasgow, G75 0EL

I had a telephone consultation with this patient who was previously investigated for a possible rheumatic disease. His symptoms continue to be in the neurological spectrum. He reports widespread pins and needles which used to be mostly on his legs or forearms and now he feels them all over his body. He also reports headaches. He has a history of large middle cranial fossa arachnoid cyst and had the last MRI in 2015.

He has no CTD related symptoms. His immunology showed ANA 1/160 speckled with negative ENA, negative ANCA, negative CCP and negative rheumatoid factor. His inflammatory markers were normal.

Following our discussion today and his previous investigations my impression is that this patient does not have rheumatic disease and I see that he had a plan to be reviewed by Neurology. I am copying my letter to the Neurology department as the patient feels that he is experiencing more headaches and paraesthesia for which he would most likely benefit from a review.

I am discharging him from Rheumatology however if in the future you feel that he is developing a rheumatic or autoimmune or inflammatory disease please consider re-referring.

Yours sincerely

**Dr Georgiana Young**  
Consultant Rheumatologist

Consultant: Mr Sarath K Nalagatla

Dear Dr Cooper

Patient Name: Mark McCormack  
Patient date of birth: 17/05/1970  
Patient Address: 46 Livingstone Drive, East Kilbride, Glasgow, G75 0EL

This gentleman had CT KUB carried out recently. This revealed small bilateral renal lower pole stones. In the upper pole of left kidney there appeared to be a slightly larger stone. There was no evidence of any hydronephrosis.

I don't think there stones need any intervention at present. He will be reviewed back in the clinic routinely.

Yours sincerely

Date: 17.10.15

Dear Dr Sumner  
Patient's name: Mark McCormack  
Address: 46 Livingstone Rd  
DOB: 17.5.10

I saw the above patient at the pharmacy today and I have recommended and supplied him/her with varenicline tablets to help him/her give up smoking. The patient would be taking varenicline for a maximum of 12 weeks. Could you please add this medicine to the patient's medication records? No further action would be required from you, as the patient would be receiving all supplies of varenicline from my pharmacy. Please do not hesitate to contact me should you require further information

Yours sincerely

Dear Sarah,

**Mark McCormack; D.O.B: 17/05/1970; CHI: 1705705154**  
**46 Livingstone Drive, East Kilbride, Glasgow, G75 0EL**

I wonder if Mr McCormack can be seen at your clinic in Hairmyres with potential for injectable treatments for his ongoing headache disorder. He appears to have been referred in 2019 by Laura McCorkell having had trialled a number of oral prophylactic medications including propranolol, amitriptyline, topiramate, gabapentin, pregabalin, flunarizine, candesartan, dosulepin as well as occipital nerve block none of which were beneficial. I suspect that the referral has been misplaced and I wonder if you would consider this again.

A slight complicating factor is the fact that Mr McCormack has an arachnoid cyst which clinically is incidental however he has been assessed in neurosurgery by Mr Grivas a couple of times and they now wish to proceed with ICP monitoring which was offered to him. I have arranged repeat a neuroimaging study at Mr McCormack's request but I wonder if he could be seen at your clinic there.

Yours sincerely

Dr Alok Tyagi

Consultant: Doctor Nikolaos Dadiras

Dear Dr Sim

**Patient Name:** Mark McCormack  
**Patient date of birth:** 17/05/1970  
**Patient Address:** 46 Livingstone Drive, East Kilbride, Glasgow, G75 0EL

**Diagnosis:** History of arachnoid cyst – under neurology  
Polyarthralgia

**Plan:** Updated blood tests with full serology requested today  
Nerve conduction studies to be arranged

**Follow-up:** 3 months

Thank you very much for referring this nice gentleman to the Rheumatology Out-patient Clinic today. He has a known history of arachnoid cyst and he was receiving injections and he tells me that he is due to be referred for Botox injections as well. He had a kidney stone and stent inserted a few years ago. When he had the operation for the stent to be removed, he started feeling very unwell with pins and needles mainly affecting his left arm and left leg and also increased fatigue. He also reports pain and swelling mainly affecting his finger joints of both hands which is worse on the right hand side. On further questioning he tells me that his hands tend to change colour from white to blue to red during the cold weather, however, he does not report any significant hair loss or sun sensitivity. He also informed me that he keeps getting spots on his private areas but there is no history of mouth ulcers.

On examination today, there was no evidence of any active synovitis in any of his joints, however, squeeze test appeared mildly positive in both hands. Phalens test appeared positive on the left wrist and therefore we will arrange some nerve conduction studies for this and I have also requested some updated blood tests including full serology as well and he will be reviewed in 3 months' time.

Yours sincerely

**Dr Nikolaos Dadiras**  
Consultant Rheumatologist (Medinet)

CHI: 1705705154

Dear Doctor G Sim,

Your patient attended Hairmyres Hospital on 02/03/2017 at 13:09

Presenting complaint: chest pain, pain in r arm

### Diagnosis:

Diagnosis Notes:

Discharge Type:

Investigations: Nil

Radiology Exams: Nil

Procedures: Nil

Medications: Nil

Follow up: Nil

Notes: Nil

**Additional Information:** non specific chest pains, likely musculoskeletal. Sharp, not pleuritic. Tender anterior chest wall on palpation, otherwise examination normal. Complex PMH. ECG no acute changes, troponin normal. Although this man is a smoker with a positive FH for IHD, clinically this did not sound like cardiac sounding pain. If he does not settle please consider referral to RACPC. Thanks

Yours faithfully

Dr [REDACTED] Cash

Dear Dr. B Cooper,

**Mark McCormack; D.O.B: 17 May 1970; CHI: 1705705154**  
**46 Livingstone Drive, East Kilbride, Glasgow, G75 0EL**

Attendance: Specialty - Neurology; Clinic - SGRNE4-NURSE RANKIN NEURO TUES PM  
Date and Time of Appointment - 13/02/2018 13:30

### Clinical Comments:

Mr McCormack attended the greater occipital nerve block injection clinic today for his chronic migraines. He is unsure whether his first injection was beneficial in helping his headaches. He continues to have a daily headache and the severity is always worse in the morning. He feels the injection gave him a slight side effect of worsening of his headaches to start. Mark informed me that he experienced some pins and needles in his left hand following playing his guitar, he also has spoken to you before about pins and needles in his left leg. I explained if the symptoms worsen to contact yourself.

Today I administered a bilateral injection using depo medrone 40mg/1ml and lidocaine 10mg/1ml into each side. There were no complications with this procedure and we have requested a review appointment with Dr Tyagi routinely. I have said to Mark if he feels his injection was beneficial to contact the nurse phone clinic and we will arrange a further appointment. I have given him diaries to complete and return.

Yours sincerely

Rankin

**Clinical Comments:**

Mr McCormack returned for review in the Neurosurgery outpatients clinic. I had previously seen this gentleman in January 2016 when he was investigated for worsening headaches and he was diagnosed with a left temporal lobe Sylvian type arachnoid cyst at the size of 45x42mm. The headaches continue to bother the patient. They do not have a particular pattern however they could occur 3-4 times per week with a duration of 6-7 hours. The current features from the CT scans / MR scans extending from 2011 to 2015 have not indicated any features of brain parenchyma compression or any midline shift. However on a previous appointment we had discussed the option of ICP monitoring which could reliably rule out the scenario that the arachnoid cyst is the cause of the headaches as a result of a raised Intracranial Pressure.

I have again discussed the option of ICP monitoring with Mr McCormack. I have come into the details of the surgical procedure itself and I have also discussed the risks including the risk of infection / meningitis, brain contusion / haemorrhage with neurological deterioration (small risk), extra-dural haematoma, seizure as the most significant or most important risks. There is a very small risk of life with these procedures. I am also planning to refer Mr McCormack to my Neurology colleagues with a special interest in headaches.

Mr McCormack has been asked to contact my secretary with his decision whether to proceed with this invasive investigation.

In the mean time I have organised a follow-up CT scan of the brain to look for any morphological changes on this arachnoid cyst.

Yours sincerely,

Dear Dr Simmons

**Re: Mark McCormack; DOB: 17.05.1970; CHI: 1705705754**  
**47 Murdoch Road, East Kilbride, G75 0JN**

As you may recall, I met with Mr McCormack in October 2011 for an assessment. The outcome of this assessment was an invitation to join a stress management group. Mr McCormack did not attend this group and did not respond to our invitation to contact the department. As such, he has now been discharged from the East Kilbride Psychological Therapies Team.

If you have any questions or would like to discuss the case further, then please do not hesitate to contact me.

Yours sincerely

Consultant: Doctor Ibrahim Imam

Dear Dr Simmons

**Patient Name:** Mark McCormack  
**Patient date of birth:** 17/05/1970  
**Patient Address:** 46 Livingstone Drive, East Kilbride, Glasgow, G75 0EL

This gentleman was referred to the Neurology clinic from the Rheumatology service on account of headache. Incidentally, he is under Dr Tyagi, the Headache Specialist at Glasgow, who is carrying out headache interventions and had just arranged an MRI scan for him. I was unable to access any of his Glasgow correspondence or results of investigations. I however reassured him that Dr Tyagi will be in touch with him with the results of the scans and I will leave his ongoing care with Dr Tyagi.

Yours sincerely

**Dr Ibrahim Imam**  
**Consultant Neurologist (Insource Medicare)**

Authorised on 06/06/2022 15:11:45 by Typist Eileen [REDACTED] on behalf of Dr [REDACTED] Imam.

Dear Dr Greene,

**Mark McCormack; D.O.B: 17/05/1970; CHI: 1705705154**  
46 Livingstone Drive, East Kilbride, Glasgow, G75 0EL

Thank you for referring Mr McCormack to the neurosurgical services. Mr McCormack presents with a six year history of headaches which are worse during the morning and on awaking. His headaches have been getting worse. The headache may last for the whole length of the day. The headache involves the left side of the head and on some occasions is associated with a hot feeling in the head. He has been on different types of medication in the past which he could not tolerate or were completely ineffective. He is currently on no medication. He also complains of numbness of both fingers and hands. He reports previous incidents of a detached retina which was treated surgically and his vision is limited in the left eye.

On clinical examination there are no focal neurological deficits. I was not able to visualise the fundus on the left side and there was no papilloedema on the right.

The MRI scan of the brain has indicated an arachnoid cyst on the left temporal lobe which is approximately 45x41x42mm which has not increased in size when compared to previous imaging in 2011 and 2015 (CT scan brain). There is scalloping of the skull of the sphenoid and there is potential effect on the left peduncle. There is no evidence of any deteriorating features or increase in size over the past four years.

In order to explain these headaches and correlate those with the presence of the arachnoid cyst it would be appropriate to proceed with ICP studies and explore the changes in the intracranial pressure.

I have discussed this option in detail with Mr McCormack who is not keen at all to undergo any surgical intervention, although I have explained that this is a minimal procedure with a very small risk. The risks involved are infection, meningitis, brain haemorrhage and the risk of a seizure.

I have asked Mr McCormack to think about ICP monitoring and he will call us back in the next couple of weeks with his decisions.

Yours sincerely

**31562716 25/10/2011****CT Head**

Clinical History: Severe headache 3-4 months.

If there is a large developmental arachnoid cysts lying within the left middle fossa with associated temporal lobe dysgenesis. This is the lifelong lesion and here is no evidence of any associated complications such as a subdural collection or haemorrhage into the cyst. The midline is not displaced. The patient also has a further insignificant developmental abnormality as there is a cavum septum pellucidum. The arachnoid cyst is most unlikely to be the source of headaches in view of its life-long duration and lack of any related complication. No other pathology is demonstrated, there is no significant bony abnormality and no evidence of sinusitis. If there is any continued anxiety about this developmental anomaly then discussion with a neurosurgeon may be helpful for the patient.

34380433 06/08/2015 US Testes

**Clinical History:** Recent increase in size right teste previously surgery due to benign lesion right hemiscrotum ? hydrocele.

**Report:** No significant abnormality identified within either teste. The area of concern indicated by the patient, at the lower right hemi scrotum appears to correlate with a small testicular appendix. No other focal abnormality demonstrated bilaterally. Other than a 2 mm simple cyst identified within the left epididymal head both epididymides appear unremarkable. Perfusion is symmetrical bilaterally.

**Patient Address:** 46 Livingstone Drive, East Kilbride, Glasgow, G75 0EL

#### Diagnosis

Chronic migraine with medication overuse  
Arachnoid cyst  
Patient believes headaches are due to arachnoid cyst  
Kidney stones  
Anxiety and depression  
Hypertension

#### Current medication

Nil

I reviewed this gentleman in clinic on 26<sup>th</sup> November 2022. Apologies for the delay in getting a letter to you.

He has been seen by a number of neurologists in the past for the same issue. He was referred onto the Headache Clinic. He has had headaches since he was a child and he says his [REDACTED] describes him waking up as a child being distressed. He blames a number of bad behaviours and social struggles, such as drug abuse in the past, due to his chronic pain. He currently has headaches daily which he says are all bad. He will be bed-bound on these days. He will wake up with a pounding all-over head pain which moves around the head. The severity goes up and down over the course of the day but is always worse in the morning, however, it will improve when he lies down during the day and rests. There is no nausea and vomiting but he says that he has a feeling of dread. He gets light and noise sensitivity and denies any motion sensitivity but needs to be in bed with the headaches. He is blind in his left eye but had floaters in his right eye. He has been referred to Ophthalmology but DNA'd the appointment as he says he cannot use the phone and finds it too difficult to be able to deal with phone appointments.

He is insistent that he needs to see Neurosurgeons as he feels his headaches are still related to an arachnoid cyst and feels he requires a shunt. In the past, he has been told repeatedly that the arachnoid cyst is benign and does not need any intervention but he does not feel this is the case despite repeated reassurance.

He is supposed to be taking medication for hypertension and thyroid issues as well as a PPI but is not taking them as he does not want to take any medications.

He [REDACTED] his [REDACTED] who is aged 25. He previously worked as a live sound engineer but stopped 10 years ago due to his chronic pain issues. He does not drive.

He smokes around 30-40 roll-ups a day which he feels is his only pleasure in life. He estimates he smokes around 1g of cannabis a week as well as using magic mushrooms every few months which he feels keeps his mental health in check. He uses cocaine sporadically. He says he drinks a few bottles of wine or Buckfast a day, at least 4-5 days of the week usually, and says this is his way of coping with pain. He has reverse sleep-wake cycle, being awake during the night and sleeping during the day. He says his [REDACTED] has to look after him, help him with cooking and feeding him.

**CLINICAL INFORMATION****History of presenting complaint / examination findings / investigation results****Presenting complaint**

Main  
presenting  
Complaint: Headache

Reason for Referral: This 44 year old gentleman presents with a severe headache which he has had for 3 years. He has a history of poor vision in the left eye due to previous trauma. The concerning features of this headache are that there is no relief with analgesia and this is now present in the morning. He has previously had a CT head scan in 2011 which showed an arachnoid cyst. This patient actually dates the headache back to that time. He had a repeat CT head this year in April and it was noted again that he had a left mid fossa developmental arachnoid cyst with temporal lobe dysgenesis. He notices the headaches more in his left temporal region.

On examination cranial nerves were intact apart from reduced vision in the left eye which is chronic. Peripheral nerves were intact. He is very keen to be seen.

I would be grateful if he could be seen.

Many thanks.

Dear Dr Cooper

**Patient Name:** Mark McCormack  
**Patient date of birth:** 17/05/1970  
**Patient Address:** 46 Livingstone Drive, East Kilbride, Glasgow, G75 0EL

Mr McCormack was reviewed in my Urology Clinic today. He was treated for left renal stones in the past. Recently he has been getting some left sided abdominal pain. His x-ray KUB was normal.

In view of significant pain I have requested a CT KUB following which he will be reviewed back in my clinic.

Yours sincerely

Please Item

Appendix 2      NHS Lanarkshire Stop Smoking Service  
Letter to GP advising varenicline use via PGD

**NHS**  
Lanarkshire

Date: 05/03/12      Stop Smoking Service Location: ...  
GP/Clinician: Dr Simmons      Adviser: ... Lisa Loudon  
Address: Hunter H/C      Address: ... Uddon Hospital  
Tel: ... Fax: ...      Address: ... Farm Rd.  
Direct Line: ML3 9LA      Hamilton

Dear Doctor: Dr Simmons

Re: Client's name: Mark McCormack      DOB: 17/5/70  
Address: 46 Livingston Drive FK      Postcode: G45 0EC

The above client has attended a NHS Lanarkshire Stop Smoking Service clinic and following discussion with an experienced nurse adviser, varenicline has been identified as the medicine of choice for their quit attempt.

The attached client questionnaire (Appendix 1) has been completed and no contraindications to the use of varenicline have been identified.

Note that varenicline will be provided by the Stop Smoking service 1-2 weeks pre quit for up to 3 months unless the client's ongoing assessment for suitability indicates that it is no longer suitable:

|                           |                   |
|---------------------------|-------------------|
| Days 1 - 3                | 0.5 mg once daily |
| Days 4 - 7                | 0.5mg twice daily |
| Days 8 - end of treatment | 1mg twice per day |

Starter pack will be issued: date: ...      Quit date will be: 13/2/12  
Week 8 > 12/3/12

You should record these details in your GP prescribing software and if you have any concerns please contact the Stop Smoking Service adviser to discuss

Yours sincerely,  
Alaudan  
Stop Smoking Service Adviser

Mark would find it easier to obtain varenicline from the group from now on please.

Dear Dr. G Sim,

**Mark McCormack; D.O.B: 17 May 1970; CHI: 1705705154**  
**46 Livingstone Drive, East Kilbride, Glasgow, G75 0EL**

Attendance: Specialty - Neurosurgery; Clinic - SGAGNS4 - MR GRIVAS NSURG TUESDAY PM  
Date and Time of Appointment - 16/05/2023 16:00

## Clinical Comments:

I have reviewed Mr McCormack in Neurosurgery Outpatients Clinic. He is known to our service from previous appointments in 2016 and 2017. He presents with headaches since his childhood which are associated with an abnormal feeling in his stomach and altered mood especially in the morning hours. Over the past three years he admits to his headaches getting worse. In the past we had advised Mr McCormack to attend for ICP monitoring in relation to studying the cerebrospinal fluid dynamics and the effects of the arachnoid cyst. This is only way we can explore if that cyst is associated with increased ICP

I have explained that there are static features on the volume of the cyst since 2015 compared to the most recent scan (May 2022).

Today we have discussed that the management of those cysts and the main treatment is conservative in asymptomatic patients who do not have neurological symptoms. An operation may be the option of treatment if the patient develops neurological symptoms or symptoms of increased ICP or in the case of significant mass effect or rupture. The mode of the operation could be either arachnoid cyst fluid diversion with marsupialisation or cystic peritoneal shunting.

Mr McCormack reports of dysaesthetic symptoms to the left side of his body which is ipsilateral to the cyst and is not likely to be related.

CHI: 1705705154

OPCL 16/05/2023 v1

---

Mr McCormack would be more assured if he had a second surgical opinion in relation to the management of this cyst.

We have left this discussion with Mr McCormack to have a second surgical opinion before he makes his decision about ICP monitoring:

Plan:

GP: Please facilitate a new referral to another Consultant Neurosurgeon at the Department of Neurosurgery

Yours Sincerely

Mr Athanasios Grivas

Consultant Neurosurgeon

Dear Dr Simmons

**MARK McCORMACK – D.O.B. 17.05.70**

TEL NO. [REDACTED]  
46 LIVINGSTONE DRIVE, MURRAY, EAST KILBRIDE G75 0EL

Thank you for referring this man to the Clinic. He has been troubled with headaches for the last 4 years which are now worsening. He has had two CT scans showing a left middle fossa arachnoid cyst. I am not sure of the size of this cyst. The patient can wake up with a splitting headache which can sometimes be better once he is up on his feet. He describes it as a shooting pain over the left side of his head. There is no photophobia or phonophobia. He has had a detached retina with impaired vision in the left eye. He has also been troubled with unexplained abdominal pain.

He is currently on no medication. There is no family history of note. He does not work; he lives alone; he is a smoker; drinks a bottle of wine every 5 days.

On examination optic discs were normal. There was no focal neurology.

Arachnoid cysts are often asymptomatic but occasionally they can be a cause of headache and very occasionally surgery is contemplated for them. As things stand I am not convinced that his headaches relate to the arachnoid cyst but it is a possibility. His last scan was almost a year ago so I will arrange for him to have an MRI of brain and be in touch when I have the result. I would not recommend any symptomatic therapy for the time being. Once again thank you for referring this man.

Yours sincerely

2/2

He feels his headaches are not migrainous and he feels that he would ideally need to be pain-free for any quality of life or for medications to be worth taking.

He is in firm belief that the cyst is the cause of all his issues. I do not feel we can move on until he has had yet another opinion from the Neurosurgeons. I have told him that after this, if he still feels the cyst is the main cause of his problems and does not want to treat his headaches as migrainous, there is nothing else that we can do to help him and he would be discharged back to his GP. I think he has a very fixed view regarding his pain management understanding and coping strategies and these will need to be dealt with and I think they will be best suited through the Pain Management team in the future. I am not planning to see him back routinely unless he is ready for treatment for a non-surgical cause for his headaches.

Yours sincerely

Consultant: Mr Sarath K Nalagatla

Dear Dr Sim

Patient Name: Mark McCormack  
Patient date of birth: 17/05/1970  
Patient Address: 46 Livingstone Drive, East Kilbride, Glasgow, G75 0EL

This gentleman was reviewed in my Urology Clinic today. He previously underwent left flexible ureterorenoscopy and laser stone fragmentation. His x-ray KUB was clear today. His serum calcium and urate levels were normal earlier. I gave him fluid and dietary advice.

He will be reviewed back in the clinic routinely.

Yours sincerely

Dear Dr Sim

### Discharge Summary

Patient Name: Mark McCormack  
Patient date of birth: 17/05/1970  
Patient Address: 46 Livingstone Drive, East Kilbride, Glasgow, G75 0EL  
Date of admission: 23/07/2016  
Date of discharge: 24/07/2016

Admission Diagnosis - Left proximal ureteric stone 7-8 mm which moved into the renal pelvis following stent insertion

Discharged From - Ward 6, Monklands Hospital

Procedures: Left ureterorenoscopy and laser stone fragmentation under general anaesthetic and IV antibiotic cover

#### Clinical Progress and Investigations:

Mr McCormack was admitted electively to Monklands Hospital today. Under general anaesthetic and IV antibiotic cover, left flexible ureterorenoscopy was performed. A 12/14 access sheath was used. The stone in the renal pelvis was fragmented with the laser and fragments extracted with the basket. No stent left indwelling.

He will be discharged home tomorrow if well and afebrile. He will be reviewed back in my clinic in four months.

Follow-up: Mr Nalagatla's Outpatient Clinic 02/12/2016 Hairmyres Hospital

Yours sincerely,

This letter confirms initial attendance. However, if you do not receive a further request it will be due to non-attendance, therefore I will be unable to verify cessation.

**Prescribing Starter Pack Day 1-14**

☐ Your patient named above has attended week 1 of 6 at the Stop Smoking Service. They have expressed a desire to use Varenicline Tartrate for this quit attempt. The Service offers clients information, continued behavioural support, and advice about the treatment options available. Varenicline Tartrate has been requested therefore they are advised that it is a the discretion of their GP as to whether they are medically suitable or not and advised to make an appointment with you to be assessed. If appropriate, please supply the patient with a prescription for the Starter Pack day 1-14 as described in the information box below.

**Prescribing Weeks 2-6**

☒ The above named patient is using Varenicline Tartrate and their quit date will be [REDACTED]. Could you again medically assess and prescribe a further 4 weeks' supply of Varenicline. They continue to attend for support.

**Prescribing Weeks 6-12**

☐ The above named patient is using Varenicline and quit smoking on [REDACTED]. Could you again medically assess and prescribe the remainder of their therapy.

**PRESCRIBING INFORMATION**

Where possible it would be helpful if the starter pack was prescribed for the first 2 weeks of the four week prescription.

Varenicline Tartrate should start 1-2 weeks pre quit date and should be given for 12 weeks

**NHS WAITING LIST INITIATIVE**

JG/KC/3440331

3rd August 2015

Dr Simmons  
Hunter Health Centre  
Andrew Street  
East Kilbride  
G74 1AD

Dear Dr Simmons

Mr Mark McCormack DOB: 17.05.70

Tel No: [REDACTED]

46 Livingston Drive, East Kilbride, Glasgow G75 0EL

MRI shows a large left middle cranial fossa arachnoid cyst. There is slight distortion of the left cerebral peduncle but CSF spaces are preserved and there is no overall evidence of mass effect. I shall arrange to review him.

Yours sincerely

Dr [REDACTED] Greene  
CONSULTANT NEUROLOGIST

Doctor

Dear Consultant Neurosurgeons

**Patient Name:** Mark McCormack  
**Patient date of birth:** 17/05/1970  
**Patient Address:** 46 Livingstone Drive, East Kilbride, Glasgow, G75 0EL

I wonder if this gentleman could have yet another opinion.

He has a benign arachnoid cyst and has been told repeatedly by Neurologists that this is not the cause of his chronic daily headaches (which are likely due to migraine and medication overuse). However, he is very sure that his cyst is the cause of all of his issues and states he was previously told by a Neurosurgeon that he would need to have a shunt put in place but that this decision was then changed without any explanation. His last letter from Mr Grivas in 2017 states the patient was not keen on undergoing ICP monitoring. The patient states this is not the case.

I wonder if we would be able to have another opinion with regards to this cyst so we can try and move forward.

He has a number of slightly abnormal health beliefs, which would need to be combatted in the longer term. He states he is unable to use a telephone due to his anxiety levels and so any appointments would need to be face-to-face only.

Yours sincerely

Dr [REDACTED] Miller  
Consultant Neurologist

### Clinical Comments:

Mr McCormack attended the clinic today. I had seen him previously 3 weeks ago and advised him to try flunarizine which he currently takes. He did have some side effects at the start but appears to be tolerating it well just now and I would recommend that he continue it for a further 3 weeks prior to an assessment being made whether it has helped his headache disorder or not. Should that not be beneficial, I would recommend you give him a trial of candesartan starting at 4 mg a day increasing in 4 mg increments up to a dose of 12-16 mg a day. I have also booked him onto the nerve block clinic in due course.

Yours sincerely

Dr Alok Tyagi

Dear Dr. B Cooper,

**Mark McCormack; D.O.B: 17 May 1970; CHI: 1705705154**  
**46 Livingstone Drive, East Kilbride, Glasgow, G75 0EL**

Attendance: Specialty - Neurology; Clinic - SULMNE3-NURSE L MCCORKELL NEURO TUES AM  
Date and Time of Appointment - 13/08/2019 11:00

#### Clinical Comments:

Mr McCormack attended the nurse led headache review clinic today.

Mark reports his recent trial of dosulepin has not proved beneficial in reducing either the severity or frequency of his headaches. His current dose is 100mg daily. I have advised Mark he should gradually reduce this with a view to stopping over the next 4 to 6 weeks. Mark has tried all oral preventatives in order to be eligible for a trial of botox however this would need to be considered within NHS Lanarkshire. I have informed Mark I will write NHS Lanarkshire for consideration of this and they should be in touch in due course. Mark has the telephone details of the nurse led clinic should he require further advice or support in the meantime.

Yours sincerely

Date and Time of Appointment - 15/07/2016 14:45

**Follow Up:** DNA - send a further appointment

### Clinical Comments:

I had previously reviewed Mr McCormack in the neurosurgical outpatient clinic in relation to left temporal arachnoid cyst. I had offered the option of ICP monitoring to investigate long standing headaches. The patient had not replied to my request with his decision and I had therefore organised a review appointment to discuss this issue further. Unfortunately Mr McCormack has failed to attend this appointment. I plan to offer him a further appointment to discuss this issue, however if the patient does not wish to be seen in neurosurgery clinic, please let us know so that we can discharge him from the our Service.

Yours sincerely

Mr A Grivas  
Consultant Neurosurgeon

I reviewed this gentleman in Hairmyres Hospital Gastroenterology Out patients Department today. He has a number of symptoms which are contributing to an overall fatigue condition.

He has undergone multiple investigations for these and appears motivated to take onboard advice to address these issues in the form of stress counselling techniques.

Yours sincerely

Dr Emma Nowell MRCP  
Gastroenterology Specialty Doctor

Reason for referral: Testing for HFE-related hereditary haemochromatosis has been requested.

Conclusion: **The p.C282Y variant is not present (see interpretation/comments)**

### Results and interpretation:

The HFE sequence variant p.C282Y, which is commonly associated with HFE-related haemochromatosis, was NOT detected.

A diagnosis of HFE-related hereditary haemochromatosis is very unlikely in this patient.

Comments:

### Technical information:

Allele specific PCR amplification was performed to detect the presence of the c.845G>A (p.Cys282Tyr) sequence variant in the HFE gene. Testing for the c.187C>G (p.His63Asp) variant is only initiated when the p.C282Y variant is detected to identify compound heterozygotes, and is not advised in the absence of heterozygosity for p.C282Y. Sequence nomenclature is according to HGVS guidelines (<http://www.hgvs.org/>) using accession number NM\_000410.3.

## CLINICAL INFORMATION

## History of presenting complaint / examination findings / investigation results

## Presenting complaint

Main presenting  
Complaint: REQUEST FOR ENDOSCOPEReason for  
Referral: Dear Doctor

This patient has a long history of upper abdominal pain aggravated by food and associated with acid reflux. He has no weight loss and is a current smoker, he has been treated for Helicobacter upset in the past. I think that he now merits endoscopy in view of his worsening symptoms.

I shall be grateful if this could be arranged.

Yours sincerely

## Reason for referral

Care type requested: Out Patient

Expected outcome: Not Specified

## Past medical history

## Current medication (Active Repeat medication issued within the last 12 months)

No current medications recorded

## Recent medication (Any medication issued within last 90 days not shown above)

## CLINICAL INFORMATION

## History of presenting complaint / examination findings / investigation results

## Presenting complaint

Description: DR YORSTON'S CLINIC PLEASE - PREVIOUS RETINAL DETACHMENT

Comment: This patient was previously under your care having had a retinal detachment repaired in 2006.

The last correspondence I have regarding him is a letter from Dr Winter from 17 August 2006 saying he would be reviewed in 3 months. Mr McCormack cannot recall whether he attended a further appointment.

He came to see me recently complaining of left peri-orbital pain and I must say his symptoms were highly suggestive of migraine.

However in view of his history I would be very grateful if you could review him in your clinic.

Thanking you.

Dear Dr Simmons

Re: Mark McCormack – CHI No: 1705705154  
47 Murdoch Road, East Kilbride, Glasgow G75 0JN

Diagnosis: Left eye pars plana vitrectomy epi-membrane retinal peel, SF6 in  
dramatic vitreous haemorrhage & choroidal rupture epi-retinal membrane

Visual acuity: Right eye 6/5 Left eye counting fingers

Mr McCormack still has a persistent minimal epi-retinal membrane causing a moderate amount of sub retinal fluid in the fovea region. The retina is otherwise completely flat. There is extensive sub retinal fibrosis due to the choroidal rupture. We will see him once again in the clinic in three months time. No further surgery is indicated at the moment.

Yours sincerely

I Winter  
Vitreous-retinal Fellow

Dear [REDACTED]

Re: Mark McCormack – D.o.B 17.05.70  
47 Murdoch Road, East Kilbride, Glasgow G75 0JN

Mr McCormack had a left vitrectomy and epi-retinal membrane peel on 30.06.06. Today the visual acuity has improved to counting fingers and he has noticed subjective improvement in his visual [REDACTED]. On examination the anterior segment and intra ocular pressure are unremarkable. He has a choroidal rupture extending under the left macula however the traction retinal detachment that was present at the time of surgery has resolved. I have asked him to reduce his eye drops to twice daily for two weeks and I will review him once more in six weeks time.

Yours sincerely

  
D Yorston  
Consultant Ophthalmologist

DR YORKSTON  
CONSULTANT VITREORETINAL SURGEON  
GARDEN VILLAGE GENERAL HOSPITAL  
1055 GT WESTERN ROAD  
GLASGOW

Eye Clinic 9/6/06

Dear Dr Yorkston

Mark McCormack 17/5/70  
47 Murdoch Road East Kilbride G75 0JN

? Retinal detachment with dense vitreous haemorrhage.

Thank you for agreeing to see this patient. He was assaulted almost 3 weeks ago and struck about the left eye. Since then the vision has been poor and it has been noted that he has a dense left vitreous haemorrhage.

When seen at my clinic on 9/6/06 visual acuities were 6/4 on the right side and perception of light on the left with poor projection. Pupillary reactions were previously noted to be normal although the left pupil was sluggish.

In view of his extremely poor vision I am concerned he may have a retinal detachment. An ultrasound performed in our radiology department has suggested that the retina is flat but I would be grateful for your 2<sup>nd</sup> opinion. If you feel he does not require vitreous surgery I am happy to see him again at my clinic.

Kind regards.

Yours sincerely

A J Fern

Dear Dr. Simmons

**MARK McCORMACK (17 5 70) 47 MURDOCH ROAD EAST KILBRIDE**

Thank you for referring this gentleman for a urea breath test. I am pleased to report this was negative.

I would treat him as ~~dysfunctional~~ dyspepsia in view of his young age. I have not arranged any further follow up. *FUNCTIONAL*

Yours sincerely

I would be grateful for your opinion and advice on the above named patient. A brief outline of symptoms and signs is given below.

Dear Doctor

This patient who abuses alcohol to excess is suffering from increasingly severe dyspeptic symptoms. He has upper abdominal pain aggravated by food. He was treated for helicobacter in April 2003 and currently Omeprazole is not helping his symptoms.

I shall be grateful if you will advise regarding endoscopy. Thank you for seeing him.

Yours sincerely

Dear Dr Simmons,

Mark McCormack  
 DOB 17/5/70  
 47 Murdoch Rd, EK

■ saw the above named gentleman on 06/06/03 for initial assessment after referral from yourself.

Mark admitted that he was suffering from stomach problems at the moment and hoped to be treated for this, but realised that his alcohol consumption was a barrier to this. He said that although he was drinking in excess of 300 units per week, at this stage he had no other significant problems and was continuing to enjoy this lifestyle and did not see a need to change it.

I had a lengthy discussion with Mark about current and long-term effects on his health. As he has no motivation at present to address his situation, I have not given him a further appointment. He was happy to take literature on the effects of alcohol and drugs as he also admitted to abusing ecstasy, hash and sulph.

I have also advised him that if he feels he wants help at anytime in the future, he can be re-referred.

Yours sincerely

Liz Russell

## LEUCOCYTES

|                             |                                  |
|-----------------------------|----------------------------------|
| Adults                      | $4.0 - 11.0 \times 10^9/l$       |
| Infants (Full Term 1st Day) | $10.0 \times 26.0 \times 10^9/l$ |
| Infants 1 year              | $6.0 - 18.0 \times 10^9/l$       |
| Children 4-7 years          | $5.0 - 15.0 \times 10^9/l$       |
| Children 8-12 years         | $4.5 - 13.5 \times 10^9/l$       |

## DIFFERENTIAL LEUCOCYTE COUNT

|        |             |                            |
|--------|-------------|----------------------------|
| Adults | Neutrophils | $2.0 - 7.5 \times 10^9/l$  |
|        | Lymphocytes | $1.0 - 4.0 \times 10^9/l$  |
|        | Monocytes   | $0.2 - 1.2 \times 10^9/l$  |
|        | Eosinophils | $0.04 - 0.4 \times 10^9/l$ |
|        | Basophils   | $0.01 - 0.1 \times 10^9/l$ |

## PLATELETS

|                           |
|---------------------------|
| $150 - 400 \times 10^9/l$ |
|---------------------------|

## SEDIMENTATION RATE (method of Westergren)

## Age dependent

|       |                                                 |                       |
|-------|-------------------------------------------------|-----------------------|
| Men   | $\frac{\text{Age of patient}}{2}$               | = Top of Normal Range |
| Women | $\frac{\text{Age of patient plus 10 years}}{2}$ | = Top of Normal Range |

Dear Dr Simons,

Re: NAEK MCCORMACK  
DOB: 17.5.70.

Mr McCormack attended for a sight-test today complaining of headaches behind the eyes. No obvious abnormalities were found regards either ocular structure or refraction. Vision was excellent.

Mr McCormack seems keen to be referred further to establish cause of the headaches which I explained is your decision, however I do not think the headaches are originating from the eyes.

If you have any queries please call.

Yours Sincerely  
S. Blair

EAST KILBRIDE

Dear Dr Cooper

**MARK McCORMACK (17.5.70)**  
**73 ANNIVERSARY AVENUE, EAST KILBRIDE**

I reviewed this patient following excision of his left epididymal cyst. His wound has healed well. There is slight thickening near the head of the epididymis on the left side and I have reassured the patient that this will settle down with time. I have however warned him about the possibility of recurrence of epididymal cyst.

I have not made any further appointment for follow-up.

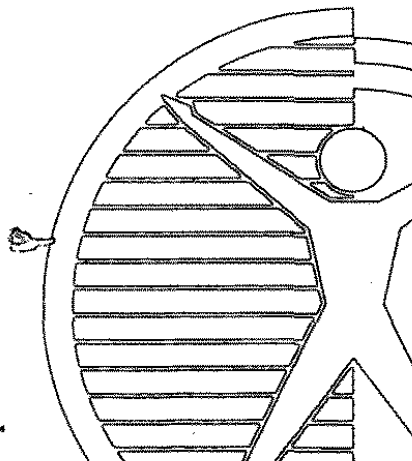

Yours sincerely

SKULL, SINUSES 14 NOV 1997 R97/6005568H

SKULL:  
No vault abnormality.

PARANASAL SINUSES:

There is almost complete under-development of the frontal sinuses. Both maxillary antra and the ethmoid sinuses visualised have a normal appearance. There is however prominence of the soft tissues within the nasal cavity on the right.

Stonehouse Hospital  
Stonehouse

Dear Mr Carswell

RE/ MARK MCCORMACK, 79 MELBOURNE AVENUE, EAST KILBRIDE G75 8DU  
DOB/ 17 05 70 STONEHOUSE HOSPITAL UNIT NO/ 155451

This patient was previously on your waiting list for excision of a left epididymal cyst. He cancelled the surgery as he could not get time off work.

He is now in a more stable situation workwise and is quite keen to have the cyst removed.

I would be grateful if he could be once again be put on the waiting list for this.

Thanking you.

Yours sincerely,

BARRY COOPER

Andrew Street  
EAST KILBRIDE  
G74 1AD

Dear Dr Gunneberg

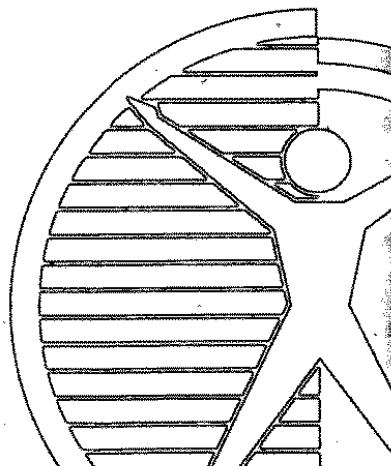

MARK McCORMACK (17.05.70) 79 MELBOURNE AVENUE, EAST KILBRIDE G75 8DU

You will recall that this patient was referred with a fairly large left epididymal cyst and I offered to bring the patient in for excision of the cyst under general anaesthetic. However, on sending for the patient recently he has contacted us to say that he is having 'no trouble' from the cyst and does not wish to come in for operation. I have therefore taken his name off my waiting list.

Yours sincerely

MR G F CARSWELL

Dear Doctor

RE MARK MCCORMACK  
79 MELBOURNE AVE EAST KILBRIDE

Thank you for seeing this patient who came to see me recently with two or three small penile warts.

He denies any other symptoms although he did state that his [REDACTED] is currently being treated for cervical cancer.

I would be grateful if he could be seen for treatment of these.

Thanking you.

Yours sincerely

BARRY COOPER

Dr. B. Cooper,  
Hunter Health Centre,  
Andrew Street,  
EAST KILBRIDE G74 1AD.

Dear Dr. Cooper,

MARK MCCORMACK, 79 MELBOURNE AVENUE, WESTWOOD, EAST KILBRIDE G75. (17.05.70)

The above patient attended the Day Surgery Unit at the Victoria Infirmary on 10.11.93 for removal of both lower third molars under a short general anaesthetic. He has recovered well and has been discharged from my care.

Kind regards,  
Yours sincerely,

  
D.I. RUSSELL  
Consultant Oral Surgeon.

Infirmary.  
Langside Road, Glasgow G42 9TY.

US GALL BLADDER 17 DEC 1992 R92/0075636B  
No ultrasound evidence cholelithiasis. Liver and  
pancreas appear normal. This patient will have a  
barium meal organised.

There is some distortion of the normal renal medullary  
echo pattern bilaterally. Appearances are of  
extremely doubtful significance but I would suggest a  
follow-up IVP examination if there is any clinical  
evidence to support renal dysfunction.

*to be seen*

EAST KILBRIDE

Dear Dr Cooper

Mark McCormack (17.5.70)  
79 Melbourne Avenue, East Kilbride

Thank you for referring this boy who had several episodes of short lived upper abdominal pain a couple of months ago. His [REDACTED] wonders whether this was related to his starting at secondary [REDACTED]. Happily he has had no further pain for three months and is keeping entirely well. In these circumstances I do not think any further investigation is required. I have attempted to reassure Mrs McCormack and not asked Mark to come back for review.

Yours sincerely

*W. O. Stone*A STONE

Dear Dr. Cooper,

Mark McCormack,  
79 Melbourne Avenue, East Kilbride.

Thank you for referring this patient to the  
Orthopaedic clinic. I append overleaf a copy of my clinical  
notes for your information.

Yours sincerely,

■ T. Watson M.B., Ch.B., F.R.C.S.,  
Locum Orthopaedic Consultant.

NHS Confidential: Personal data about a patient

This [REDACTED] is alleged to be stumbling and to be having a lot of pain in his left hip, though this has settled since he saw his doctor.

ON EXAMINATION: Walking normally today. Full range of hip movements though he is difficult to examine as he rather resists abduction.

To have an x-ray of the hips to exclude C.D.H.

[REDACTED] shows delay in the development of the left capital epiphysis, there is no obvious cause for this, the head is well in joint. This may have been a subluxing hip at birth that has reduced itself, but left a slight delay in ossification. I am sure that this will go on to ossify normally.

Child to be allowed to run about normally.

To be seen in four months for check x-ray. - 11.1071.

Mr. Watson.

Dict: 1st December, 1970.

Dear Dr. Leckerman,

Mark McCormick, d.o.b. 17.5.70, (Unit No. 249370),  
79 Melbourne Avenue, East Kilbride.

This child was referred to me by the East Kilbride Paediatric Clinic on account of an umbilical hernia. This should regress spontaneously and I have asked the [REDACTED] to let me see him again in one year.

Yours sincerely,

*J. C. Grant*

**CLINICAL INFORMATION****History of presenting complaint / examination findings / investigation results****Presenting complaint**

Main presenting  
Complaint: REQUEST FOR ENDOSCOPE

Reason for  
Referral: Dear Doctor

This patient has a long history of upper abdominal pain aggravated by food and associated with acid reflux. He has no weight loss and is a current smoker. he has been treated for Helicobacter upset in the past. I think that he now merits endoscopy in view of his worsening symptoms.

I shall be grateful if this could be arranged.

Yours sincerely

**Reason for referral**

Care type requested: Out Patient

Expected outcome: Not Specified

**Past medical history****Current medication** (Active Repeat medication issued within the last 12 months)

No current medications recorded

**Recent medication** (Any medication issued within last 90 days not shown above)

Consultant: Mr Sarath Krishna Nalagatla

Dear Dr Cooper

**Patient Name:** Mark McCormack  
**Patient date of birth:** 17/05/1970  
**Patient Address:** 46 Livingstone Drive, East Kilbride, Glasgow, G75 0EL

Mr McCormack was reviewed in my out-patient clinic today. This gentleman's CT KUB which was done earlier showed bilateral small calcifications in both the kidneys. They appear to be parenchymal.

I gave him fluid advice I not think these tiny calcifications need any further intervention. I am pleased to discharge him from the clinic.

Yours sincerely

**MR SARATH K NALAGATLA**  
**CONSULTANT UROLOGICAL SURGEON Mch (Urol), MD, FRCS (Urol)**

Dear Dr. B Cooper,

**Mark McCormack; D.O.B: 17 May 1970; CHI: 1705705154**  
**46 Livingstone Drive, East Kilbride, Glasgow, G75 0EL**

Attendance: Specialty - Neurology; Clinic - SGATNE6-DR TYAGI HEADACHE WED PM  
Date and Time of Appointment - 27/03/2019 15:00

### Clinical Comments:

This 48 year old man continues to suffer from generalised disabling headaches which have previously been classified as chronic migraine by Dr Tyagi. His headaches continue to be accompanied by nausea and photophobia and when severe they can result in him retiring to a dark room to try and sleep during the day. He only has occasional headache free days. He describes some sensory symptoms in his left leg but feels they started after he had a stent inserted. He also describes awakening with some sensory symptoms in his left hand. Phalen's test today was negative and sensation was normal and symmetrical in both hands. He had normal power on all left hand thumb movements and normal intrinsic hand muscle function.

He has previously tried Propranolol, Amitriptyline, Topiramate, Pizotifen, Gabapentin, Pregabalin, Flunarizine, Candesartan, greater occipital nerve blocks and Sumatriptan injections and they have not helped his migraines.

He is currently not working or taking any medication for his headaches and he drinks 2 bottles of wine every 10 days when his headaches are really severe.

I have advised him to commence Dosulepin 25-100mg at night for migraine prophylaxis and Eletriptan 40mg at onset of severe headache, maximally 2 or 3 days per week for abortive therapy.

OPCL 27/03/2019 v1

If this is ineffective, then Botox is another potential option and he is eligible for this on the NHS and this can be discussed when he is routinely reviewed at follow up with our Headache Nurse Specialist.

Yours Sincerely

Dr Michael McKenzie

GP with special interest in headaches

Electronically Signed: Dr [REDACTED] Consultant

| Today's Date                                              |                                                                                                                            |

#### Prescribing Starter Pack day 1-14

☒ The above named patient has attended week 1 of 6 at the Stop Smoking Service. They have expressed a desire to use Varenicline Tartrate for this quit attempt. They are aware their GP will ultimately decide on whether to prescribe this medication or not, and that they should continue to attend for group support. The service will update you on whether they have set a quit date before you require to prescribe any further supplies. If your patient does not supply a further letter it indicates they failed to return to the group, and I would then be unable to verify their quit attempt.

#### Prescribing weeks 2-6

☐ The above named patient has commenced Varenicline Tartrate and their quit day will be .....  
They are encouraged to continue to attend for group support. Could you prescribe further 4 weeks supply

#### Prescribing weeks 6-12

☐ The above named patient has regularly attended the Stop Smoking Group and has not smoked for ..... weeks. Cessation has been validated by weekly Carbon Monoxide readings.  
Would you please issue the remaining 6 weeks therapy as below.  
Thank you.

| Varenicline Tartrate should start 1 – 2 weeks pre quit date and should be given for 12 weeks |                      |
|----------------------------------------------------------------------------------------------|----------------------|
| Days 1 - 3                                                                                   | 0.5 mg once per day  |
| Days 4 - 7                                                                                   | 0.5 mg twice per day |
| Days 8 – End of treatment                                                                    | 1 mg twice per day   |

**Additional Administrative Information**

SHOULD THE PATIENT BE TREATED WITH MILITARY VETERAN PRIORITY :No

Is Patient Transport Required:No

**CLINICAL INFORMATION****History of presenting complaint / examination findings / investigation results****Presenting complaint**

Main

presenting Pain/swelling/paraesthesia

Complaint:

Reason for This 49 year old gentleman has had ongoing pain in his right hand and foot, and more recently, he complained of swelling in his right fingers and toes, with long term paraesthesia in both hands and legs.

Referral:

On examination there was swelling in the fingers of his right hand, otherwise locomotor and neurological examination was normal. Relevant blood tests were satisfactory apart from T4 at 11.8, urea 8, cholesterol 6.6, urate 365, ferritin 514, and ANA positive 1/80.

Given his ongoing problems as above, I would be grateful for your assessment. In the meantime, I discussed general advice with him and his abnormal blood results will be followed up as appropriate.

Thank you.

**Reason for referral**

Care type requested: Out Patient

Expected outcome: Not Specified

**Past medical history****Current medication** (Active Repeat medication issued within the last 12 months)

No current medications recorded

**Recent medication** (Any medication issued within last 90 days not shown above)

**CLINICAL INFORMATION****History of presenting complaint / examination findings / investigation results****Presenting complaint**

Main

presenting Not Specified

Complaint:

Reason for This 45 year old gentleman presented with an episode of frank haematuria, along with various symptoms that may relate to the urinary tract, so I would be grateful if you could see him for assessment.

He said he developed pain behind his right testicle on the day prior to his appointment, that radiated up to his right abdomen in to his right upper quadrant where he developed a painful "lump". He went to bed, the pain resolved on waking on the day of his appointment, then he developed similar problems on his left side, followed by frank haematuria x 1. He has a long history of terminal dribbling, otherwise he has no lower urinary tract symptoms.

He was investigated by gastroenterology in 2014, when it was documented that he had multiple symptoms contributing to an overall fatigue condition, for which multiple investigations were negative and he was advised to address these in the form of stress counselling techniques, and he was given contact details for stress control classes available through the NHS locally. He did not arrange this and he was given the details again, with a view to trying these classes.

On examination his abdomen was soft, with general abdominal tenderness. There was no inguinal lymphadenopathy or hernia evidence. He had mild bilateral testicular tenderness. He complained of some right groin pain on testing the range of movement of his right hip. He had no ankle oedema or DVT evidence. He declined pr examination to check for evidence of prostatitis etc, and I arranged for him to have relevant bloods tested, an MSSU and prescribed him a one week course of Trimethoprim 200 mg bd along with Buscopan and to review him with the results.

When reviewed his symptoms had resolved. Relevant blood tests including PSA (0.5) were satisfactory and an MSU showed no growth. Microscopy was not performed due to a technical problem.

On discussing the situation with him, he said that he definitely had frank haematuria x 1 and so I would be grateful for your assessment. I advised him to arrange review with a urine sample if he has further problems with frank haematuria.

Thank you for seeing him.

**Examinations and Investigations**

MSSU : Not Recorded -

UE and FBC: Not Recorded -

PSA: Not Recorded -

Ultrasound: Not Recorded -

#### Additional Administrative Information

Subspecialty :HEADACHE CLINIC

Name of person making referral :DR C SIMMONS, GP LOCUM

SHOULD THE PATIENT BE TREATED WITH MILITARY VETERAN PRIORITY :No

Is Patient Transport Required:No

**CLINICAL INFORMATION****History of presenting complaint / examination findings / investigation results****Presenting complaint**

Main  
presenting Headache  
Complaint:

Reason for This 44 year old gentleman presents with a severe headache which he has had for 3 years. He has a history of poor vision in the left eye due to previous trauma. The concerning features of this headache are that there is no relief with analgesia and this is now present in the morning. He has previously had a CT head scan in 2011 which showed an arachnoid cyst. This patient actually dates the headache back to that time. He had a repeat CT head this year in April and it was noted again that he had a left mid fossa developmental arachnoid cyst with temporal lobe dysgenesis. He notices the headaches more in his left temporal region.

On examination cranial nerves were intact apart from reduced vision in the left eye which is chronic. Peripheral nerves were intact. He is very keen to be seen.

I would be grateful if he could be seen.

Many thanks.

**Reason for referral**

Care type requested: Out Patient  
Expected outcome: Not Specified

**Past medical history****Current medication** (Active Repeat medication issued within the last 12 months)

No current medications recorded
