CODES FOR NON-ADMINISTRATION OF PRESCRIBED MEDICINE

If a dose is not administered as prescribed, initial and enter a code in the column with a circle drawn round the code according to the reason as shown below. **Inform the responsible doctor in the appropriate timescale.**

1. Patient refuses
2. Patient not present
3. Medicines not available - CHECK ORDERED
4. Asleep / drowsy
5. Administration route not available - CHECK FOR ALTERNATIVE
6. Vomiting / nausea
7. Time varied on doctor's instructions
8. Once only / as required medicine given
9. Dose withheld on doctor's instructions
10. Possible adverse reaction / side effect

OTHER MEDICINE CHARTS IN USE		PREVIOUS ADVERSE REACTIONS This section must be completed before any medicine is given		Completed by (sign & print)	Date
Date	Type of Chart	None known ☑			
		Medicine / Agent	Description of reaction		

- **Write clearly in block capitals, using a black ballpoint pen**
- **Use approved names for medicines**
- **Never alter a prescription**
- **Route of administration**
  The only acceptable abbreviations are:

IV	- intravenous	SL	- sublingual	NG	- nasogastric
IM	- intramuscular	PR	- per rectum	ID	- intradermal
SC	- subcutaneous	PV	- per vagina	TOP	- topical
INHAL	- inhaled	NEB	- nebulised		

Never abbreviate ORAL or INTRATHECAL
Specify RIGHT or LEFT for eye and ear preparations

- **Write the medicine dose clearly**
  - **The only acceptable abbreviations are:**
    g - gram mg - milligram ml - millilitre
    all other doses must be written out in full eg. micrograms
  - Avoid decimal points eg. 100 micrograms (not 0.1mg). If unavoidable, write zero in front of the decimal point
  - Prescribe liquids by writing the dose in mg
  - For 'as required' medicines, state the symptoms to be relieved, the minimum time interval between doses and the maximum daily dose
  - Write units as 'units' not 'iu'

ADULT FLUID PRESCRIPTION CHART

NHS Lothian

Date 2d7/18 | Sheet no ①

Ward 10

IV fluids for adults: for more details, see pocket guideline or App

Consider volume status: Hypovolaemic / Euvolaemic / Hypervolaemic

Does your patient need IV fluids? If so, are they needed for:

Maintenance, Replacement, or Resuscitation?

Write in Maintenance requirements in next 24 hours:

Weight (kg) _____ Essential

Volume 30ml/kg	Sodium 1mmol/kg	Potassium 1mmol/kg (unless $K^+ > 5.0$)
ml	mmol	mmol

Estimated oral intake in the next 24 hours _____ ml. Oral intake will reduce the intravenous volume required

Never give more than 100 ml/hr of 0.18% NaCl / 4% Glucose: risk of hyponatraemia

If Sodium ≤132 mmol/l, then Plasmalyte 148 should be used for maintenance. Plasmalyte 148 not to be used for maintenance in other circumstances

Weight (kg)	Maintenance Fluid Requirement in 24hr	Rate (ml/hr)	Equivalent to 1000 ml over:
35-44	1200 ml	50	20 hr
45-54	1500 ml	65	16 hr
55-64	1800 ml	75	14 hr
65-74	2100 ml	85	12 hr
≥75	2400 ml	100 (max)	10 hr

Prescribe ***Maintenance fluids and diabetic fluids*** *here.* ***Max rate is 100ml/hr.***

Prescribe subcutaneous fluids using SC guidelines *Use separate prescription chart if more bags are required Mark as 'Sheet 2'*

Type + Additions	***Vol (ml)***	***IV/ SC***	***Rate (ml/hr)***	Start time	Finish time	Prescribed by (Sign and Print)	Set up by (Sign and Print)

Use the box below to prescribe any additional fluids that are required for ***Replacement*** *or* ***Resuscitation***

PLASMALYTE	1000	IV	STAT			WD Millar	

Resuscitation: *give Fluid Challenge 250 to 500ml Plasmalyte 148 over 5 to 15 min. Stop and assess before repeat. Request senior / ICU opinion if 2000ml insufficient*

REMEMBER
- **Record all observations** on NEWS chart
- **Document any** deterioration in the notes - remember the Structured Response Tool
- **Escalate** your frequency of observations
- If at any point during your assessment you are concerned about your patient - **CALL FOR HELP**

	Assess	Possible Actions
AIRWAY	Is the airway - • Patent • At Risk • Obstructed	→ Suction if indicated → Head tilt, chin lift/jaw thrust → Airway Adjuncts → Administer Oxygen → Call 2222 if at risk
BREATHING	• Respiratory rate • SpO2 • Accessory muscle use • Noises +/- percussion, palpation & auscultation • Position / posture	→ Administer prescribed Oxygen to maintain saturations 94%-98% (NB COPD 88%-92%) → Monitor SpO2 / ABGs → Consider chest x-ray → Treat underlying cause → Call 2222 if not breathing
CIRCULATION	• Pulse • Blood Pressure • Capillary refill time • Core temperature / colour • Urine output • Consider 4 body cavities for fluid & blood loss (4 + on the floor) • Monitor drain losses	→ Obtain IV access → Obtain blood samples → Prepare fluid challenge → Initiate Fluid Balance Chart → Call 2222 if no circulation → Consider initiating Major Haemorrhage Protocol → Monitor response to actions
DISABILITY A = Alert V = Voice / Verbal P = Pain U = Unresponsive	• AVPU for initial assessment • GCS, on-going neuro assessment • ABC's & treat hypoxia or hypovolaemia • Blood Glucose • Drugs	→ Re-assess GCS → Check blood glucose if less than 4mmols/litre activate hypoglycaemia protocol → Check Drug Chart → Remember accurate documentation
EXPOSURE	• Top to toe examination • Look for evidence of blood loss / rashes / drains / wounds etc	→ Control bleeding → Treat any underlying conditions identified → Reassess → Maintain patient's dignity → Evaluate actions

Pain Assessment and Management Guidelines

Cancer-related pain: Always score worst pain in the last 24 hours or since last assessment: refer to Palliative Care Guidelines

Acute Pain: Score current pain on movement, e.g. deep breathing: refer to Acute Pain Guidelines

Persistent pain - 6 or above which distresses the patient and is unresponsive to guidelines

↓

Call Medical staff / Senior Nurse / Nurse Practitioner

↓

For further advice contact:

ACUTE	PALLIATIVE
Mon-Fri: Bleep Acute Pain Team Out of Hours: On-call Anaesthetist	Mon-Fri: Bleep Palliative Care Team Out of Hours: Via Switchboard

Pain Score	Nausea Score 0-3	Epidural Motor Block Score please do not √ motor block column
0 None Continue to assess pain at least daily	**0 - No Nausea**	**0 - Full Power**
1-3 Mild Continue to assess pain with routine observations, must be at least daily	**1 - Nausea** Consider anti-emetic	**1 - Weak but able to raise legs** **2 - Able to bend knees**
4-5 Moderate Assess, administer and review analgesia as appropriate for patient	**2 - Nausea / Vomiting** Administer anti-emetic	**3 - Minimal movement**
6-10 Severe Assess, administer and review analgesia as appropriate for patient	**3 - Persistent Nausea &/or Vomiting** Contact Doctor	**4 - Paralysis**
Using appropriate Lothian Guidelines	**Using guidelines prescribe / give anti-emetics and review**	If score 2 or above please immediately contact the Acute Pain Team or On-Call Anaesthetist if out of hours

Participant Information Sheet

Markers and Paracetamol Poisoning Study

You are being invited to take part in a research study. Before you decide whether or not to take part, it is important for you to understand why the research is being done and what it involves. Please take time to read this information carefully. Talk to others about the study if you wish. Contact us if there is anything that is not clear, or if you would like more information. Take time to decide whether or not you wish to take part.

What is the purpose of the study?

Paracetamol can cause damage to the liver when taken in overdose. We have developed new blood tests that can identify liver injury at first presentation to hospital. We hope that further development in this field will help us to identify earlier what treatment is best and safest for that person and allow patients to be discharged faster.

Why have I been invited to take part?

This study is recruiting patients who have taken too much paracetamol. We aim to recruit around 326 patients to this study.

Do I have to take part?

You do not have to take part; it is your decision whether or not to participate. If you do decide to take part, you will be given this information sheet to keep and be asked to sign a consent form. If you decide to take part, you are still free to withdraw at any time, and without giving a reason. Deciding not to take part or to withdraw from the study, will not affect the healthcare that you receive, or your legal rights.

What will happen if I take part?

A member of the research team will ask you to read and sign a consent form to agree to participate. We will ask the laboratory for the surplus blood that has already been collected from you, and any future surplus blood that may be collected from you on this hospital admission. No extra blood taking will be performed for the study.

We will record information about you including your age, sex, amount of paracetamol taken, treatment details and routine blood test results. This information will be kept secure within the NHS. Your information will be linked to your blood sample by a unique code number, so it will not be possible for anyone to identify you.

What are the possible benefits of taking part?

There are no direct benefits to you taking part in this study, but the results might help to improve the healthcare of other people in the future.

The results of this study may be used for the future commercial development of a new medicinal product, treatment or test. Your participation will not entitle you to benefit financially from the commercial development of the product, treatment or test.

What are the possible disadvantages of taking part?

There are no known disadvantages to taking part as we are using blood samples that have already been taken. We will ensure that the blood sample cannot be identified.

What if there are any problems?

If you have a concern about any aspect of this study, please contact Dr James Dear on 0131 242 9214 for further information.
In the unlikely event that something goes wrong and you are harmed during the research and this is due to someone's negligence then you may have grounds for a legal action for compensation against the NHS but you may have to pay your legal costs. The normal NHS complaints mechanisms will still be available to you. Please see contact details below.

What will happen if I don't want to carry on with the study

You can change your mind at any point during this study. If you subsequently decide that you no longer want to continue in this study, we would remove you from participating. Any samples and data already collected would remain in the study unless you would prefer the existing samples and data to be destroyed. For further information regarding withdrawal at any point then please email james.dear@ed.ac.uk

Will my taking part be kept confidential?

All the information we collect during the course of the research will be kept confidential, following strict laws which safeguard your privacy at every stage.
All identifiable records (for example your hospital number) will be kept exclusively within the NHS and will be protected by a password. Any information that leaves the NHS system will be anonymised to safeguard your identity.
To ensure that the study is being run correctly, we will ask your consent for responsible representatives from the study sponsor and NHS institution to access your records and data collected during the study, where it is relevant to your taking part in this research. The Sponsor is responsible for overall management of the study and providing insurance and indemnity.

What will happen to the results of the study?

The study will be written up in medical publications and shared at national and international meetings. You will not be identifiable in any published results.

Who is organising the research?

This study is being organised and sponsored by the University of Edinburgh and NHS Lothian.

Who has reviewed the study?

All research in the NHS is reviewed by an independent group of people called a Research Ethics Committee (REC). A favourable ethical opinion has been obtained from the London- South East REC. NHS management approval is also obtained.

Researcher Contact Details

If you have any further questions about the study, please contact Dr James Dear on 0131 242 9214 or email: james.dear@ed.ac.uk

Independent Contact Details

If you would like to discuss this study with someone independent of the study, please contact Dr Neeraj Dhaun on 0131 242 9100, bean.dhaun@ed.ac.uk

Complaints

If you wish to make a complaint about the study please contact:

Multi Disciplinary Care Pathway for

PARACETAMOL OVERDOSE

Ingested over a period of one hour or less - presenting 8-24 hours after acute ingestion

This care pathway includes the SNAP based regimen for acetylcysteine and is **ONLY** for use in the Emergency Department and Acute Medical Unit at the Royal Infirmary of Edinburgh

This version is not available on TOXBASE®. For advice contact the on-call toxicologist at the RIE (Monday – Friday 8.30am-6pm see RIE toxicologist rota or contact Base 6)

6				

PATIENT: This document is a supplement to your record of treatment for an admission with a suspected or confirmed paracetamol overdose.

STAFF: Should be completed in addition to the Inpatient Record (nursing admission, medical clerking, Toxicology Questionnaire), NEWS observation chart, ED shock chart, Infusion charts and Prescription & Administration Record.

SUMMARY	Initials & time

Ingestion date 29/5/17

Ingestion time 17⁰⁰

List all the drug(s) ingested

Co-codamol 8/500 x 10

Alcohol ingested? Yes ☐ No ☑

Was paracetamol bought for overdose: Yes ☐ No ☐

Total paracetamol ingested 8000 g

Patient's weight 59.6 kg

CALCULATE
The amount of paracetamol ingested 83 mg / kg

Notes	**For obese patients weighing more than 110 kg**, the toxic dose in mg/kg should be calculated using 110 kg, rather than the patient's actual weight. **For pregnant patients** the toxic dose in mg/kg should be calculated using the patient's pre-pregnancy weight.

There is a dosage calculator on TOXBASE® for calculating mg/kg.

This document represents the care expected for a majority of your patients. It is to be expected that some patients will need care other than that noted. This is referred to as a 'Variance' and should be noted as 'Var' in the appropriate space & explained fully on the 'Variance' sheet, page 8.
Clinicians are free to exercise their own professional judgements as appropriate.
However, any alteration to practice noted in this document should be noted as a 'Variance' in notes.

IS Lothian

Please tick boxes as appropriate and initial / time in conjunction with the Inpatient record.

STAGE 1 - IMMEDIATE ASSESSMENT

Ingested over a period of one hour or less - presenting 8-24 hours after acute ingestion

Give acetylcysteine **IMMEDIATELY** to all patients if it is thought that more than **150 mg/kg** body weight paracetamol has been ingested. **DO NOT WAIT for the plasma paracetamol concentration.**

The efficacy of the antidote declines rapidly during this period and it must therefore be started **URGENTLY**

	Initial & time
Assessment for risk of liver damage **Paracetamol ingested.....83.....mg/kg (see calculation on page 2)** ☐	
Clinical priorities • Is it thought that **more than 150 mg/kg** has been ingested Yes ☐ No ☑	
If Yes, **START ACETYLCYSTEINE IMMEDIATELY** DO NOT WAIT FOR BLOOD RESULTS ☐ (Refer to SNAP based dosage table on page 5)	
If No, **Wait** for blood results before starting acetylcysteine ☐	
Blood sampling • Obtain urgent blood samples for paracetamol concentration, U&Es, TCO_2, LFTs, GGT, FBC and INR ☐	
On receipt of blood results assess the risk of liver damage: • by plotting the paracetamol concentration on the graph on page 4 ☑ • Date, time & blood results documented on page 4 ☐	
If treatment has not already been initiated: • Commence acetylcysteine if paracetamol concentration is plotted on or over the treatment line (Refer to SNAP based dosage table on page 5) ☐ • Consider the use of acetylcysteine if the patient has an ALT above the limit of normal even if the paracetamol concentration is below the treatment line ☐ • Acetylcysteine is not indicated if the plasma paracetamol concentration is under the treatment line, the INR and ALT are normal, and the patient is asymptomatic **AND** there is no doubt about the time of ingestion ☐ • If creatinine is abnormal and the above criteria are met acetylcysteine is not required but renal function should be monitored as an inpatient and if required, treated conventionally ☐	

Notes

A rise in ALT can suggest acute liver injury and in cases of severe poisoning the ALT rises rapidly and is commonly abnormal at first presentation to hospital

Haemodialysis may be indicated alongside acetylcysteine if the patient has a very high paracetamol concentration and an elevated lactate. For advice contact local toxicologist or the National Poisons Information Service. Tel 0344 892 0111 out of hours

	Initial & time
If treatment has already been initiated: • Continue acetylcysteine if paracetamol concentration is plotted over the treatment line ☐ • Discontinue acetylcysteine if paracetamol concentration is plotted below the treatment line; the INR and ALT are normal; patient is asymptomatic; **AND** there is no doubt about the time of ingestion ☐ • If creatinine is abnormal and the above criteria are met acetylcysteine is not required but renal function should be monitored as an inpatient and if required, treated conventionally ☐	

Medical staff of grade FY2 or above must review blood results prior to discontinuing therapy

Results reviewed by .....Date.....Time.....

If treatment with acetylcysteine is not indicated or discontinued and further blood tests are not required,

go to Stage 4 'Subsequent Management & Discharge' [p 8]

Continuation

Multi Disciplinary Care Pathway for
PARACETAMOL OVERDOSE – 8-24 HOURS
Date:
Hospital: Royal Infirmary of Edinburgh
Clinical area: ED ☐ AMU ☐

Please tick boxes as appropriate and initial / time in conjunction with the Inpatient record.

STAGE 2 – INITIATION OF TREATMENT WITH ACETYLCYSTEINE

FOR OBESE PATIENTS WEIGHING more than 110 kg
Calculate acetylcysteine dose using 110 kg rather than the patient's actual weight

FOR PREGNANT PATIENTS
Calculate acetylcysteine dose using the patient's actual pregnant weight

THIS SNAP BASED DOSAGE TABLE IS ONLY FOR USE IN THE ROYAL INFIRMARY OF EDINBURGH

Adult acetylcysteine prescription

(each ampoule = 200 mg/mL acetylcysteine)

Regimen	First Infusion		Second Infusion	
Infusion fluid	200 mL 5% glucose or sodium chloride 0.9%		1000 mL 5% glucose or sodium chloride 0.9%	
Duration of infusion	2 hours		10 hours	
Drug dose	100 mg/kg acetylcysteine		200 mg/kg acetylcysteine	
Patient Weight[1]	Ampoule volume[2]	Infusion Rate	Ampoule volume[2]	Infusion Rate
kg	mL	mL/h	mL	mL/h
30-39	18	109	35	104
40-49	23	112	45	105
50-59	28	114	55	106
60-69	33	117	65	107
70-79	38	119	75	108
80-89	43	122	85	109
90-99	48	124	95	110
100-109	53	127	105	111
≥110	55	128	110	111

[1] Dose calculations are based on the weight in the middle of each band

[2] Ampoule volume has been rounded up to the nearest whole number.

Extended treatment – continue acetylcysteine at the dose and infusion rate used in the 2nd treatment bag

Patient's weight ..59.6..... **kg**

Prescription and Administration record completed ☐ Infusion chart completed ☐

STAGE 3 – END OF TREATMENT WITH ACETYLCYSTEINE

- **End bag 2 bloods** (10 hour bloods)
  U&Es, LFTs, FBC, INR & **PARACETAMOL CONCENTRATION**

		Initial/time
• **End of bag 2 bloods** (10 hour bloods) obtained 2 hours before the end of bag 2	☐	
• Bloods results documented in table below	☐	
• **Results reviewed by medical staff (of grade FY2 and above)**	☐	

END OF BAG 2 (10 hour) bloods review

- **Criteria for DISCONTINUING acetylcysteine after Bag 2 are:**
  INR 1.3 or less **AND**
  ALT less than 100 U/L **AND**
  ALT not more than double the admission measurement **AND**
  PARACETAMOL concentration less than 20 mg/L

- **Decision to continue or discontinue acetylcysteine documented on page 7** ☐

- **ALL PATIENTS SHOULD REMAIN IN HOSPITAL FOR 20 HOUR BLOOD SAMPLING see page 7**

Multi Disciplinary Care Pathway for
PARACETAMOL OVERDOSE – 8-24 HOURS
Date:

Hospital: Royal Infirmary of Edinburgh
Clinical area: ED ☐ AMU ☐

STAGE 3 – END OF TREATMENT WITH ACETYLCYSTEINE

	Initial/time
If criteria for discontinuing acetylcysteine at end of Bag 2 are met: ☐	
• **Discontinue** acetylcysteine once bag 2 infusion is **complete** ☐	
• Acetylcysteine discontinued at	
• **The patient should remain in hospital for discharge bloods (20 hour bloods)** U&Es, LFTs, FBC, INR - 8 hours after the acetylcysteine was discontinued	
• Discharge (20 hour) bloods due at ..... Discharge (20 hour) bloods obtained at ..... ☐	
If criteria for discontinuing acetylcysteine at the end of Bag 2 are NOT met: ☐	
• **Continue** acetylcysteine treatment at the dose and infusion rate of bag 2 (page 5) ☐	
• Obtain discharge bloods (20hour bloods) 2 hours before the end of the extra bag of acetylcysteine U&Es, LFTs, FBC & INR ☐	
• Discharge (20 hour) bloods due at ..... Discharge (20 hour) bloods obtained at ..... ☐	
FOR ALL PATIENTS:	
• Discharge (20 hour) bloods documented in table on page 6 ☐	
• **Results reviewed by medical staff (of grade FY2 and above or specialist nurse trained in Nurse-Led Discharge)** ☐	

Discharge (20 hour) bloods review

- **Extended acetylcysteine is indicated if:**
  - INR is greater than 1.3 **OR**
  - ALT has more than doubled from admission bloods **OR**
  - ALT is 100 U/L or more.

This applies to patients who stopped treatment after bag 2 AND patients who continued treatment after bag 2.

- If criteria for extended acetylcysteine are not met, no further acetylcysteine is required
- If creatinine is abnormal or is 10% greater than at presentation, further acetylcysteine is not required but renal function should be monitored as an inpatient. Re-check 12 hours later.

Decision	Initial/time
• If further treatment or blood sampling is not required go to Stage 4 'Subsequent Management & Discharge'(page 8) ☐	
• If monitoring of renal function is required obtain blood samples 12 hours later and review by medical team ☐	
• **If extended acetylcysteine is indicated follow advice below** ☐	

If extended treatment is required:

	date/time
• Continue acetylcysteine at the dose and infusion rate used in the 2nd treatment bag (Page 5) ☐	
• Recheck U&Es, LFTs, FBC and INR every 10 hours to assess the course of liver injury (2 hours before the end of each extended bag) Document results on page 6 ☐	

Discontinue extended treatment when:

- INR 1.3 or less; OR falling towards normal on two consecutive blood tests, and less than 3.
- There is no clinical advantage to treating ALT rises after this normalisation in INR (indicating restoration of hepatic synthetic function)

	date/time
Extended treatment with acetylcysteine was required Yes ☐ No ☐	
If YES, number of extended bags required	

Once treatment with acetylcysteine is discontinued go to Stage 4 'Subsequent Management & Discharge' (page 8)

OTHER MEDICINE CHARTS IN USE		PREVIOUS ADVERSE REACTIONS This section must be completed before any medicine is given		Completed by (sign & print)	Date
Date	Type of Chart	None known *(tick box)* ☑			
		Medicine / Agent / Food / Other	Description of reaction		

Risk assessment for Venous Thromboembolism (VTE) has been completed ☐

Outcome: No action required ☐ TEDS ☐ LMWH/heparin (please prescribe) ☐

- **Write clearly in block capitals, using a black ballpoint pen**
- **Use approved names for medicines**
- **Never alter a prescription**
- **Route of administration**

The only acceptable abbreviations are:

IV	- intravenous	SL	- sublingual	NG	- nasogastric
IM	- intramuscular	PR	- per rectum	ID	- intradermal
SC	- subcutaneous	PV	- per vagina	TOP	- topical
INHAL	- inhaled	NEB	- nebulised		

Never abbreviate ORAL or INTRATHECAL

Specify RIGHT or LEFT for eye and ear preparations

- **Write the medicine dose clearly**
  - **The only acceptable abbreviations are:**
    g - gram mg - milligram ml - millilitre
    all other doses must be written out in full eg. micrograms
  - Avoid decimal points eg. 100 micrograms (not 0.1mg). If unavoidable, write zero in front of the decimal point
  - Prescribe liquids by writing the dose in mg
  - For 'as required' medicines, state the symptoms to be relieved, the minimum time interval between doses and the maximum daily dose
  - Write units as 'units' not 'iu'

CODES FOR NON-ADMINISTRATION OF PRESCRIBED MEDICINE

If a dose is not administered as prescribed, initial and enter a code in the column with a circle drawn round the code according to the reason as shown below. **Inform the responsible doctor in the appropriate timescale.**

1. Patient refuses
2. Patient not present
3. Medicines not available - CHECK ORDERED
4. Asleep / drowsy
5. Administration route not available - CHECK FOR ALTERNATIVE
6. Vomiting / nausea
7. Time varied on doctor's instructions
8. Once only / as required medicine given
9. Dose withheld on doctor's instructions
10. Possible adverse reaction / side effect

WARFARIN CHART

Recommended target INRs and indications:

- INR 2-2.5 for prophylaxis of DVT including surgery on high risk patients.
- INR 2.5 for treatment of DVT and PE (or for recurrence in patients no longer receiving warfarin), AF, cardioversion, dilated cardiomyopathy, mural thrombus following MI, and for rheumatic mitral valve disease.
- INR 3.5 for recurrent DVT and PE (in patients currently receiving warfarin) and mechanical prosthetic heart valves.

REMEMBER
- **Record all observations** on NEWS2 chart
- **Document concerns/decisions in clinical notes**
- **Escalate** your frequency of observations
- If at any point during your assessment you are concerned about your patient - **CALL FOR HELP**

	Assess	Possible Actions
AIRWAY	Is the airway - • patent • at risk • obstructed	• suction if indicated • head tilt, chin lift / jaw thrust • airway adjuncts • administer oxygen • call 2222 if at risk
BREATHING	• respiratory rate • SpO_2 • accessory muscle use • noises +/- percussion, palpation & auscultation • position / posture	• administer prescribed oxygen to maintain saturations 94-98% (NB COPD 88-92%) • monitor SpO_2 / ABGs • consider chest x-ray • treat underlying cause • call 2222 if not breathing
CIRCULATION	• pulse • blood pressure • capillary refill time • core temperature / colour • urine output • consider 4 body cavities for fluid & blood loss (4 + on the floor) • monitor drain losses	• obtain IV access • obtain blood samples • prepare fluid challenge • initiate fluid balance chart • call 2222 if no circulation • consider initiating major haemorrhage protocol • monitor response to actions
DISABILITY A = Alert V = Voice / Verbal P = Pain U = Unresponsive	• AVPU for initial assessment • GCS, on-going neuro assessment • ABC's & treat hypoxia or hypovolaemia • blood glucose • drugs	• re-assess GCS • check blood glucose if less than 4mmols/litre activate hypoglycaemia protocol • check drug chart • remember accurate documentation
EXPOSURE	• top to toe examination • look for evidence of blood loss / rashes / drains / wounds etc	• control bleeding • treat any underlying conditions identified • reassess • maintain patient's dignity • evaluate actions

Pain and Symptom Assessment and Management

Supportive care - pain: Always score worst pain in the last 24 hours or since last assessment. If the patient has deteriorating health with limited reversibility, refer to **Scottish Palliative Care Guidelines**

Acute Pain: Score current pain on movement, e.g. deep breathing. Refer to **Acute Pain Guidelines**

Persistent pain - 6 or above which distresses the patient and is unresponsive to guidelines

↓

Call Medical Staff / Senior Nurse / Nurse Practitioner

↓

For further advice contact:

ACUTE	SPECIALIST PALLIATIVE CARE
Mon-Fri: bleep Acute Pain Team Out of Hours: on-call Anaesthetist	Mon-Fri: bleep Palliative Care Team Out of Hours: via Switchboard

Pain Score	Nausea Score	Epidural Motor Block Score please do not (✓) motor block column
0 - None Continue to assess pain at least daily	**0 - No Nausea**	**0 - Full Power**
1 - 3 Mild Continue to assess pain with routine observations, must be at least daily	**1 - Nausea** Consider anti-emetic	**1 - Weak but able to raise legs** **2 - Able to bend knees**
4 - 5 Moderate Assess, administer and review analgesia as appropriate for patient	**2 - Nausea / Vomiting** Administer anti-emetic	**3 - Minimal movement**
6 - 10 Severe Assess, administer and review analgesia as appropriate for patient	**3 - Persistent Nausea &/or Vomiting** Contact Doctor	**4 - Paralysis**
Using appropriate Lothian Guidelines	**Using guidelines prescribe / give anti-emetics and review**	If score 2 or above please immediately contact the Acute Pain Team or on-call Anaesthetist if out of hours
