Dr Fiona Clarey at Telephone Consultation
Had been booked in by Morag due to SOB. Past 2 months has been SOB/OF.
No cough. No haemoptysis. No ankle swelling. Intermittent sharp pain on left

Medical Record Printout - Patient No: 3268

23/04/2024

History	hand side under armpit. Smoker since age of 18. Has been referred for spirometry. Doesn't think any weight loss.
Comment	Discussed that need to see for examination and also to organise CXR. Morag is referring for spirometry. I note he is booked in for f2f with RM tomorrow and this was more to discuss MH. Feels his mood has been up and down recently. Saw CPN last week for depot injection. Sometimes difficult to make out on phone today as slightly slurred. Tells me just woken up. He will keep f2f appt tomorrow to discuss more with RM and for exam/CXR.

Comment	Feels been more SOB for w while now. Feeling now he could pass out if exerting himself. Seems relieved by blue inhaler. Taking Fostair twice per day and reliever up to 5 times per day at the moment. Uses spacer. Smoker, can have dirty spit in mornings but not every day. Unaware of current weight. Advised would be best with GP appt for assessment and I will do a referral for spirometry to rule out COPD.

Comment	Called for asthma review - difficult to make out what he was saying on the phone as speech slurred. Tells me feels more SOB recently. Taking Fostair 3 times per day and unclear how often he uses reliever but ordering monthly. Encouraged to use Fostair BD. Can use 1-2 puffs as feels needed. Encouraged to use via spacer. Has one at home. Offered GP appt to discuss SOB but declined. Says not wanting to speak to GP as "he's getting himself together". Difficult consult as sounds under the influence so cut it short. Problem	Edward arrived late for his appointment again, reminded again re importance of keeping to appointment time as it causes disruption in other patients times. Presented well today and provided urine sample. States he has not been sleeping well for a while, used cocaine last week to see if this would help, but obviously had opposite effect, talked to Edward about this and dangers and effect on his mental health. Been attending ok for depot injection/appointments etc, they took blood last time. Feels he is overmedicated at times with his meds and is reducing sometimes, advised against this and should take as directed and to speak to Dr Menon at next appointment. Had teeth out, bottom, on Monday, will have to wait 2 months before getting new teeth, finding this difficult as he cant bite or chew properly. No other issues today. Okay on 90ml Methadone, no changes to this. New prescription runs from 2/8/23 to 29/8/23.

Problem	Edward attended clinic late - but seen. Presented okay. Seemed down and drowsy but denies any use of anything - then, when Dr MacNeill came to consult admitted to using cannabis. reports he has not been sleeping at all - Has spoken to his CPN but feels not getting anywhere with them. Reports last used cocaine a week ago, snorted, just a small amount. Feels he needs to get away for a bit - respite situation, advised that this is not something that ADRS would be able to facilitate. Reports to be stable on current dose 90ml daily and no changes required. Appetite has not been too good recently either and he is forcing himself to eat. No other issues today, new px runs from 7/6/23 to 4/7/23.

History	Shaking in the morning, alert, memory poor, see last - under a lot of stress - notes off drugs for months (see last with christine - told her he'd taking cocaine - admits this but 'one off at a party'). 5th may seeing psych. I have suggested that sleep and stress are impacting shakiness. meds make it better but only temporarily, not asking for increase in meds however. I suggest observing over time, nil red flags currently.

Problem	Edward was late for appointment but presented well, slightly agitated and hyper, reports to using cocaine again, smoking, last time was about a week ago, discussed dangers of this, also asked Edward about his finances as he has been accessing food banks a lot recently, states he is getting on top of this as he had to buy a new bed and some other stuff for the house. Benefits all seem to be in order so no need for WRO input. Gets paid monthly? would maybe benefit fortnightly to help him budget it a bit better. No other issues today. Happy on current dose of 90ml, no changes. Current px runs 15/3/23 to 11/4/23.

Comment	Asthma review . Poor inhaler technique . Taking salbutamol up to 5x daily . Try taking with spacer device , shown how to use spacer . Brought in Nexthaler and a salbutamol plastic cover containing a denil inhaler . Issued with another salbutamol as he says he has lost it . Explained 200 doses in salbutamol and should last 7 weeks at least . Edward has agreed to change fostair device to MDI so he can take both inhalers via spacer device to try to improve technique . Has follow up review 1 month

Comment	Telephone consultation . Asthma review . Using Relvar ellipta at present but feels he needs it twice daily . Discussed switching to another inhaler to split dose of ics/LABA . Edward has agreed to trial of fostair 100 nexthaler 1 puff Bd in place of Relvar ellipta and a review 4 weeks to see if it suits . Aware can still use salbutamol if required but that hopefully asthma is better controlled and wont need it as often . May need F2F consultation to review inhaler technique . ? still smoking .

Comment	Edward called 25/10 as was discharged from hospital and meth px has been increased to 90mls daily. I had issued 1 off px for 26/10 ok'd by FC, see IDL in docman. Edward's new monthly px should start today 27/10, can this be changed to 90mls starting today 27/10 - 23/11 this will run in sync with others. I have spoken to Edward and advised he will have to come collect his px from surgery. Edward advised he should now be getting diazepam aswell, on discharge letter. 	I have just had a call from Edward McGuigan requesting an increase to his methadone. I have advised him that he has been told that it is not possible due to his illicit drug use. He reports he is rattling. I did discuss with him that it may be more to do with the illicit diazepam use rather than his methadone and that he is on the waiting list for a detox. He advised he has been asking for this for a long time.

History	See the Public Protection referral to ? SW I presume. Await contact from SW. I would think his symptoms are due to his useage of illegal substances rather than his prescribed medication. If he is feeling "too relaxed" hot flushes and goosebumps then this can be addressed in the usual manner.

History	Spoke to Lorraine. She has had an email from an OD outreach team who will try and get in touch with him because of his recent street valium use. Lorraine will bring his case to the complex case discussion when she returns from her holiday. My suggestion is that he is put on the list for a detox- inpatient or day. I think it unlikely he will comply however, but he has capacity to choose what he does and uses.

14/07/2021 16:43	<u>Dr Roderick MacNeill at Telephone Consultation</u>
History	Edward handed the phone to Carol (neighbour and ex user) who he wishes to speak on his behalf. Fairly garrulous- he has started using again- crack cocaine, street valium, smoking cannabis, buying DHC- so she is asking for his methadone to be increased as he is becoming tolerant to it and its not holding him and hence why he has been using. I will try and speak to his CPN/Psych tomorrow.

Comment	Pt called to speak with Dr at 11.14 re his meth. Said he called and spoke to someone few weeks back unsure if it was Dr or Lorraine? I advised all tele appt have gone for today and would need to call back tomorrow at 8.45 or I can book him advance appt for next week. Someone (Lady) in background shouting over him its urgent for today he is struggling and is using so needs call today. Had got an emergency appt as he said he was suicidal. However by the time I spoke to him he wasn't any more. Speech a little pressured. Denies using anything other than a nightly joint. Doesn't feel right mentally but I suspect this is pretty close to his baseline. Advised to speak to his CPN. No word from cardiology still.....Has he had an ETT ?

History	Feeling suicidal, comes and goes. Thoughts sometimes of jumping off roof. At the minute just thoughts but last week was in bath and threw in handdryer which was plugged in in attempt to end life. Not sleeping well and feels auditory hallucinations worse esp in morning, hears music and people talking. Sounds a bit sedated on phone and feels since meds changed has been over sedated. Tells me taking medications as prescribed and denies any alcohol and or illicit drug use. Note recent admission with psychotic episode. Discussed with Edward that I would contact his CPN re this and ask them to make contact, happy with this.
