Re: Jordan McCourt; Dob: 16.10.92; CHI: 1610926536
c/o Kibble School, Goudie Street, Paisley

Jordan was seen at Kibble School for review of his ADHD medication.

It had been previously discussed that Jordan may consider a transition from Concerta XL to Atomoxetine in an attempt to maximise treatment of ADHD symptoms over a 24 hour period, particularly as Jordan is making his transition from being accommodated at Kibble School and returning to live at home and striving for independent living now that he is 16 years old.

However, Jordan is adamant that he wants to discontinue his medication. We discussed at length the impact this decision may have on his daily functioning. Both care staff and employment workers at Kibble School notice a detrimental impact on Jordan's functioning and behaviour on the days when he is not taking his medication. He has also picked up criminal charges whilst out in the community when he has not taken his medication. Despite the evidence to suggest the benefits Jordan receives from his medication, he continues to insist that his medication be discontinued.

I have therefore recommended that he reduce from Concerta XL 54mg daily to 36mg for 7 days to 18mg for 7 days and then stopping. I have also recommended to him that if at any time he wishes to reconsider and recommence medication, he should approach his GP in the first instance to discuss this further.

It is important to mention that if Jordan was to recommence medication, Dr Philip, Consultant in Child and Adolescent Psychiatry, would recommend Atomoxetine for the reasons previously mentioned in this letter.

I have been told that it is planned for Jordan to leave Kibble School in the very near future to return to living in the Glasgow area, so I have no other choice but to discharge him from CAMHS.

Yours sincerely

DONNA GILLESPIE
