30 yr old female

B/G: Depression, 4 Children, Back pain - known disc protrusions @ L4/L5, L5/S1

PC: Back pain/Incontinence/weak legs

HPC: Known sciatica symptoms for a number of months, withlower back pain radiating to legs bilat. Recently worsening symptoms for 2/52 with weak legs, alteration in sensation of lower legs bilat and urinary incontinence.

Sys: Denies symptoms aside of above. No faecal smearing/incontinence. Describes 'feeling the need to go to the toilet, but can't'. Has no infective urinary symp.

Meds: Mirtazepine/co-codamol/ibuprofen/omeprazole

Sx: Independent

O/e:
Well, apyrexial, obs stable
HS pure
Chest clear, abdo SNT BS present
Neuro - CN's intact
Arms: equal 5/5 power/tone/co-ord/sens
Legs: 4/5 power bilat, normal tone, altered sens L4/L5/S1 distribution, co-ord normal.
PR: normal sacral sensation, anal tone perhaps reduced, nil else
Lower paralumbar tenderness upon palpation
Urine dip - negative

IMP: Increasing symptoms/cord compression

Plan: MRI - No change in disc herniation from prev, no cord compression
D/W neurosurgeons - nil acute today, cannot find reason for bladder dysfunction, but can occur in relation to herniation of disc. Thus will get in contact with patient and kindly r/v in the ward next week.

Dear Dr LE Duncan

Presentation: fall - wrist inj

33 year-old LHD F student. FOOSH one week ago, GP concerned regarding scaphoid fracture.

PMH: Back pain
DH: DF118
NKDA

OE L wrist: Normal appearance. Specifically tender at ASB on two surfaces. Pain on axial compression of thumb. Non-tender radius/ulna but remaining carpals. DNVI.

XR scaphoid: Shows no obvious fracture

Imp: L clinical scaphoid fracture

Plan: Fracture clinic in 1 week as this is now one week since time of incident. Spencer wrist support with thumb extension. Continue own analgesia. Should return or see GP if any concerns meantime.

Any queries please contact A&E Reception on 0131 242 1300

Yours Sincerely,

Kirsteen Hamilton, Nurse Practitioner

Dear Ms McDonald

An appointment has been made for you to attend DCN x-ray to see Dr Craig Grice, Consultant in Anaesthesia & Pain Medicine on Tuesday the 5th March, 2013, at 2.30 p.m. for injections as discussed. Please report to the DCN x-ray reception desk on the ground floor of the DCN building. Please arrange for somebody to accompany you home as you will not be permitted to drive immediately after the procedure.

If this date is unsuitable please contact us on 0131 537 1659/1646.

Yours sincerely

DEBBIE KIRKWOOD
Pain Clinic Secretary

Dear Dr LE Duncan

Presentation: back problems

CHI: 3112791401

This 33 year old lady with chronic back pain had a slipped disc operation in 2010. Since then she has been seen by Chronic Pain and recently had steroid injection a couple of months ago. She took DHC, pregabalin, amitriptyline, but not sometimes admits regular. She has been otherwise well, but she has come with a 2 day history of lower back pain. No acute trauma. This pain is the same as what she has been having for long term. Yesterday, she was having pain while walking and while lying flat, she said that nothing really made her feel any better. She feels okay when she is sitting down. She usually walks with a stick and she is able to weight bear. She is able to walk normally.

On exam: Very tender sacral area. She is able to mobilise both hips. A little bit painful on leg straight raise on the right.
She was also seen by GP OOH.
She is able to go to the toilet. No numbness. She can pass urine even though she has not passed since yesterday, but feels that she is quite dehydrated. I did not feel it was necessary to do an x-ray and that this was probably chronic pain not improving.

She was given DHC 90 mgs which she usually takes at home and Diazepam 6 mgs which did improve slightly her pain. She was able to get up and weight bear.

IMP: Probable ongoing chronic pain with muscular spasm.

Plan: Diazepam and DHC which she has taken in the department. I have told her to return if she is having more problems with passing urine, but otherwise she should make an appointment with her GP. I do not think that this is an acute problem, however, if she is not improving and her GP cannot help her then she may have to be seen again by Chronic Pain.

Any queries please contact A&E Reception on 0131 242 1300

Yours Sincerely,

Dr Marena Zikry, Doctor

Discharge To			

Dear Dr LE Duncan

Presentation: collapse ? cause

Clinical note: SHO locum
BACKGROUND- normally fit and well, previous back surgery
Meds- dihydrocodeine, PRN paracetamol, amitriptyline
Allergy to augmentin
Lives with partner, smoker, minimal alcohol

PC- Head injury, collapse
HPC- 34 year old woman, hit her head on the wooden fireplace this afternoon at 1700, was bending down and then stood and hit left side of her head. Initially painful but was able to continue standing. Good memory of event. 20 minutes following this, collapsed onto the floor and was unconcious for 1.5 minutes, witnessed by partner to have mild upper body shaking and eye rolled back- showing the whites of her eyes. No tongue biting or incontinence. Came round and was able to say her name and DOB, no post ictal confusion. Patient does not remember collapse but remembers questions when she came round. Good memory since then.
Left sided dull headache and sensitivity to light.
No neck stiffness/fever/rash/cough/cold. No other pain. No blurred or double vision. No weakness/change in sensation. No palpitations or chest pain.
Did have short- 30 second episode while in A&E, witnessed by partner, eyes rolled back in head and gentle shaking movement in upper limbs but then came round and was back to normal.
No previous similar episodes. No family history of epilepsy. No previous head injuries.

O/E
Obs at triage- temp 36.8C, HR 94, BP 141/87, RR 16, sats 97% room air
Looks pale, alert and responsive, GCS 15
Warm and well perfused, good cap refill, dry skin
Pulse regular
Pupils equal and reactive, patient able to tolerate light in eyes
Mucous membranes moist

HS normal
Chest clear
Neuro- romberg negative, gait normal
tone/power/sensation and coordination normal in all limbs

Impression- minor head injury, no indication of serious head injury. Collapse does not sound like seizures and no indication of other pathology ?vasovagal

Plan- Given head injury advice leaflet which was explained and advised to be watched by relative and to return if issues.
Simple analgesia for headache

L.MERRY

Yours Sincerely,

Dr Lindsay Merry, Doctor

Dear Dr LE Duncan

Presentation: l wrist inj

Diagnosis:

Left Hand: Carpus: clinically suspected scaphoid fracture

Clinical notes: CHI: 3112791401

35y/o female.

P/C: Left wrist pain over past 5 days unsure mech of inj.

PMH: Back pain
Meds: Painkillers
Allergies: Co amoxiclav

O/E L lower arm: Of normal appearance.
Very tender in ASB only, DNVI.
FROM elbow, DROM wrist/hand.

Xray L Scaphoid: NBI

Imp: Clinical scaphoid fracture

Plan
- Wrist splint/thumb ext
- TTC
- Verbal/written advice given
- Take simple analgesia
- Worsening statement given, return if concerned

Referred to: Orthopaedic Trauma Triage Clinic

Date of injury: 14/04/2015 Place of injury: Other
Mechanism of injury: Other

Comorbidities: Other significant comorbidities

Patient consents to be contacted by orthopaedics service by telephone: Yes

Dear Dr LE Duncan

Presentation: seizure - see letter

Clinical note: 35F

Witnessed seizures(?) this am first by child, fell to the floor and started shaking(?)
No incontinence or tongue biting
Allegedly banged her left temple on the floor during incident.
Partner says further episode on his arrival after helping her into a chair.

Says eyes wouldn't focus and bilateral limb shaking - not tonic-clonic
Pt states has an ongoing headache, denies recent infective symptoms, feels generally 'stressed' and 'shattered' at the moment.
Apparent similiar episode last November, no f/u.
Denies alcohol/ drug use last night/ today
Alcohol within normal limits.
? confused at the time
Now orientated to T,P,P

PMH: Chronic back pain (known to chronic pain team)
Prev OD 2008

ECG - NSR/ normal QTc

O/e obs & BM within normal parameters
No bruising/ haematoma or evidence of HI
No neck tenderness

GCS 15, PERL
CN - intact, normal eye movements
HS1+2+0
HR reg
chest clear
abdo SNT

Moving all 4 limbs normal power/ tone/ sensation

Imp: Doesn't sound like organic seizure activity, unconvincing story
Episode lasting 30 secs witnessed by SN - not seizure like.

P: Check routine bloods + electrolytes
As second attendance with similar - refer O/P first seizure clinic

CK 277, K+ normal, ca/ mag/ PO4 added on

Partner concerned having further short lasting episodes in dept - none witnessed.
Still c/o headache and feeling confused, although seems orientated.
Likely fuctional element, but ongoing symptoms - unmonitored medical bed

Yours Sincerely,

Catherine Ward, Doctor

Dear Dr JM Bennison

Presentation: Ganglion left wrist - doubled in size overnight

CLINICAL NOTES:
Clinical note: Left wrist ganglion present for a while, but 2/7 ago patient woke up to find it had increased in size (around double) and was painful. Attended GP who attempted to aspirate it without success. Today wrist is more painful and the ganglion is slightly larger in size. Systemically well, no fevers or vomiting. Patient is already on multiple painkillers for back pain, but has also started taking paracetamol and ibuprofen.

PMH: Chronic back pain

Obs: Temp 36.7, HR 70

O/E
Looks systemically well
Left dorsal wrist ganglion ~1cm diameter. Mildly erythematous with two visible puncture marks. No increased warmth, non pulsatile. Tender ++ to palpate.
Limited ROM wrist due to pain. Good ROM fingers and normal power. Slight reduction in sensation on palmar surface hand.

Imp: Dorsal wrist ganglion. No current evidence of infection.

Plan//
Wrist splint
Elevate and ice at home when at rest
Worsening statement re signs of infection
Will return to see GP if no improvement - may need ortho referral

Dr Sophie Fox, FY2

Yours Sincerely,

Sophie R Fox, Doctor

Dear Dr JM Bennison

Presentation: Seizure (fit), siezure

CLINICAL NOTES:
Clinical note: CHI: 3112791401

Presented to the ED this evening with history of being at work and had had her break but didn't feel well, has been feeling very tired recently. Felt light headed and vision blurred and passed out. Was unconscious for 2 minutes and colleague said she was shaking. They tried to help her up but then she passed out again for 90 seconds with shaking. States when she came round she knew where she was and did not have a post ictal - tired period. No incontinence and no tongue biting. However the 2nd epsiode was witnessed by a GP according to SAS sheet as being a

seizure. Is currently reducing her amitriptyline, pregabalin and dihydrocodeine. no cough/cold/fever. Eating and drinking as normal. Passing urine and opening bowels as normal.

PMhx:
1) chronic back pain - is reducing medication as gets injections in spine twice a year which was helping
Dhx: amitriptyline, pregabalin, dihydrocodeine
Allergies - penicillin
SHx: lives with partner, works in Tesco, smoker, alcohol none

Obs Temp 36.9, HR 86, BP 105/83, RR 15, Sats 100%, BM 5.4

Alert
Resp - chest clear
CVS - HS 1+2+0 no added sounds/murmurs, CRT<2secs, warm and well perfused
Abdo - soft, non-tender, BS present, no masses palpable
Neuro E4, V5, M6
Tone normal throughout
Power 5/5 throughout
Co-ordination normal throughout
Sensation normal throughout
No sensory inattention
Propriception normal
Reflexes upper and lower present
Plantars downgoing bilaterally
CN 2-12 no power loss no sensory loss
PEARL - no diplopia, no nystagmus

IMP: possible seziure but seems to more inkeeping with syncope - however documentation on ambulance chart of GP witnessing a seizure

Plan
bloods
ECG - NSR, QTc 456
home with partner
given first seizure follow-up information and seziure information
does not drive
partners mum has epilepsy so is happy to look after her
to return if any concerns

Yours Sincerely,

Dr Gillian Pickering, Doctor

Dear Dr JM Bennison

Presentation: Chest pain

CLINICAL NOTES:
Clinical note: Locum SHO Lang

41yo female
BIBA

PC: Chest pain

HPC:
Sudden onset central chest pain radiating to L arm
Associated with nausea and dizziness
Eased with 300mg aspirin and GTN given by SAS - currently pain free
Has been moving boxes at work, thought it might have been a pulled muscle originally
No calf pain
No infective symptoms
First covid jab and awaiting second
No history DVT / PE / estrogen contraception

Lives with partner and daughter. Independent. Works in Tesco
Smoker 10/day long standing
Minimal alcohol

PMH:
Chronic back pain - facet joint injections under anaesthetics

Medications: as per ECS
Allergies: penicillin

O/E
Looks well
A - patent
B - RR 16 Sao2 98% on RA - chest clear, nil added
C - HR 88 139/81 WWP, calves SNT - nil peripheral oedema
D - GCS 15 apyrexial
E -

CXR: unremarkable
ECG: sinus brady, nil ischaemic
Bloods: unremrakable
Troponin: <1

Impression: non specific chest pain

Plan
-discharge with strong worsening advice

Yours Sincerely,

Christina Lang, Doctor

Dear Dr S MacCallum

Presentation: Chest pain, chest pain

CLINICAL NOTES:
Clinical note: D Whitehall ST3 (EM)

PC:

Chest pain

HPC:

Woke this morning with left sided chest pain.
Sharp in nature. Pleuritic. Radiates into left arm and back.
Associated SOB. Been clammy and sweating.
Nauseated but no vomiting.
No palpatations.
Pre-syncopal symptoms.
Denies any exertional CP or breathlessness. Works as runner at Tesco so very active.
No recent illness.

PMH:

Low back pain

DH:

Allergies: Penicillin
Meds as per ECS

SH:

Smoker - 10/day

O/E:

Alert, looks well. Has ongoing pain.
No IWOB. SpO2 100% on RA. RR 28 Chest clear
Warm to edges. Regular pulse. HS I+II+0 No peripheral oedema.
Calves NAD
Apyrexial.

Ix:

Bloods - FBC/U&Es/LFTs/trop normal

Imp:

No evidence of infection or ACS
Need to rule out PE and PTX given pleuritc pain.
???aortic syndrome

Plan:

1) Add on d-dimer
2) CXR
3) Analgesia

CXR - No focal consolidation or collapse

D-dimer - 247 (negative)

Imp:

Reassuring trop and d-dimer exclude MI/PE/aortic syndrome
No evidence of pneumothorax or infection
Cause of pain unclear but significant pathology excluded

Plan:

1) Home
-will trial PPI as has frequent reflux symptoms
-to see GP next week if ongoing issues
-worsening advice

Yours Sincerely,

Dr Daryl Thomas Whitehall, Doctor

NEWS of 5 or more?
Think Sepsis!

In a patient with a **NEWS of 5 or more** and a known infection, signs and symptoms of infection, or at risk of infection, think **'Could this be sepsis?'** and **escalate care immediately.**

Signs of Infection

- Temperature <36°c or >38°c
- Heart rate >90 beats pm
- Respiratory rate >20 breaths pm
- New confusion
- WCC <4 or >12
- Blood sugar >7.7 in non-diabetic

A&E Notes Episode/Ref: E2475188 Dr Marena Zikry 21/05/2013 11:04 Valerie Hardie	CHI: 3112791401,,This 33 year old lady with chronic back pain had a slipped disc operation in 2010. Since then she has been seen by Chronic Pain and recently had steroid injection a couple of months ago. She took DHC, pregabalin, amitriptyline, but not sometimes admits regular. She has been otherwise well, but she has come with a 2 day history of lower back pain. No acute trauma. This pain is the same as what she has been having for long term. Yesterday, she was having pain while walking and while lying flat, she said that nothing really made her feel any better. She feels okay when she is sitting down. She usually walks with a stick and she is able to weight bear. She is able to walk normally. ,,On exam: Very tender sacral area. She is able to mobilise both hips. A little bit painful on leg straight raise on the right. ,She was also seen by GP OOH. ,She is able to go to the toilet. No numbness. She can pass urine even though she has not passed since yesterday, but feels that she is quite dehydrated. I did not feel it was necessary to do an x-ray and that this was probably chronic pain not improving. ,,She was given DHC 90 mgs which she usually takes at home and Diazepam 6 mgs which did improve slightly her pain. She was able to get up and weight bear.,,IMP: Probable ongoing chronic pain with muscular spasm.,,Plan: Diazepam and DHC which she has taken in the department. I have told her to return if she is having more problems with passing urine, but otherwise she should make an appointment with her GP. I do not think that this is an acute problem, however, if she is not improving and her GP cannot help her then she may have to be seen again by Chronic Pain.,,,Any queries please contact A&E Reception on 0131 242 1300

CLINICAL INFORMATION

History of presenting complaint / examination findings / investigation results

Presenting complaint

Description: breast tenderness

Comment: Please can you see this 30 year old lady who saw me at the end of March with a lump under her left nipple. I had found it quite difficult to palpate a discrete lump at that time.On review she tells me that she had subsequently developed itch and discomfort in the area but that this has now settled. However on examination though I could not feel any discrete lumps she remains quite tender aorund the left nipple, especially below the nipple in the 6-B o'clock position. The right breast is non tender and there is no axillary lymphadenopathy.She has no family history of breast cancer.In view of her persistent tenderness I would be gratfeul for your further review of her.

PAIN QUESTIONNAIRE

Date: 25.12.12 Patient: Last name: McDonald First name: Charmaine

How would you assess your pain now, at this moment?

0 1 2 3 4 5 6 7 8 9 10

none max.

How strong was the strongest pain during the past 4 weeks?

0 1 2 3 4 5 6 7 8 9 10

none max.

How strong was the pain during the past 4 weeks on average?

0 1 2 3 4 5 6 7 8 9 10

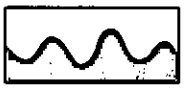
none max.

Mark the picture that best describes the course of your pain:

Persistent pain with slight fluctuations ☐

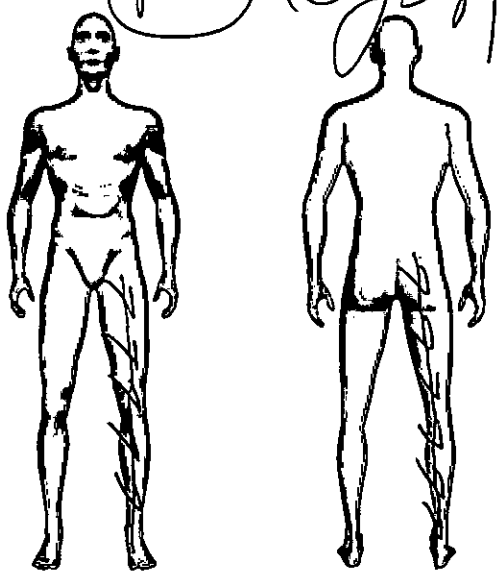
Persistent pain with pain attacks ☐

Pain attacks without pain between them ☐



Pain attacks with pain between them ☑

Please mark your main area of pain



Does your pain radiate to other regions of your body? yes ☑ no ☐

If yes, please draw the direction in which the pain radiates.

Do you suffer from a burning sensation (e.g., stinging nettles) in the marked areas?

never ☐ hardly noticed ☐ slightly ☐ moderately ☐ strongly ☑ very strongly ☐

Do you have a tingling or prickling sensation in the area of your pain (like crawling ants or electrical tingling)?

never ☐ hardly noticed ☐ slightly ☐ moderately ☐ strongly ☐ very strongly ☑

Is light touching (clothing, a blanket) in this area painful?

never ☐ hardly noticed ☐ slightly ☐ moderately ☐ strongly ☑ very strongly ☐

Do you have sudden pain attacks in the area of your pain, like electric shocks?

never ☐ hardly noticed ☐ slightly ☐ moderately ☐ strongly ☐ very strongly ☑

Is cold or heat (bath water) in this area occasionally painful?

never ☐ hardly noticed ☐ slightly ☐ moderately ☐ strongly ☑ very strongly ☐

Do you suffer from a sensation of numbness in the areas that you marked?

never ☐ hardly noticed ☐ slightly ☐ moderately ☐ strongly ☑ very strongly ☐

Does slight pressure in this area, e.g. with a finger, trigger pain?

never ☐ hardly noticed ☐ slightly ☐ moderately ☐ strongly ☑ very strongly ☐

(To be filled out by the physician)

never	hardly noticed	slightly	moderately	strongly	very strongly

PAIN CLINIC – NEW PATIENT ASSESSMENT FORM

PATIENT NAME: Charmaine McDonald **CLINIC DATE:** 25/2/12

In order for us to assess your pain problem, we would be very grateful if you would take the time to answer the following questions. If you have any problems in answering or understanding the questions, please ask for help from one of the clinic staff.

1. Please rate your pain by circling the one number that best describes your pain at its **worst** in the last week.

0	1	2	3	4	5	6	7	(8 – 9)	10
NO PAIN									PAIN AS BAD AS YOU CAN IMAGINE

2. Please rate your pain by circling the one number that best describes your pain on the **average**.

0	1	2	3	4	5	(6)	7	8	9	10
NO PAIN										PAIN AS BAD AS YOU CAN IMAGINE

3. Circle the one number that describes how, during the past week, pain has **interfered** with your:

A. GENERAL ACTIVITY

0	1	2	3	4	5	6	7	(8)	9	10
DOES NOT INTERFERE										COMPLETELY INTERFERES

B. MOOD

Dear Craig

Re: Mrs Charmaine McDonald, 69 Gilmerton Dykes Crescent, EH17 8JP
CHI: 311279 1401

Assessed by: Shona Murray, Specialist Physiotherapist on 17th October 2012.

Diagnosis: Low back and bilateral leg pain, plus ongoing Mental Health problems.

Pain Management Plan: Individual Pain Management Physiotherapy.

Action by Referrer/G.P.: Nil.

Follow-up: 2 weeks.

At Assessment:

BIO-
Pain
As you know, Mrs McDonald reported the onset of back pain about three years ago which culminated in her having surgery. She stated that this produced some improvement but not as much as she would hope for and she still has a significant problem. She is currently on the waiting list for a radio frequency procedure which I understand from our secretaries at the Western General Pain Clinic, will not be before February of 2013.

Charmaine describes low back and bilateral leg pain and paraesthesia of a constant nature. All postures and activities produce increased pain and the only thing that eases her pain is her medication, heat and lying supine.

Despite taking sleeping pills, Charmaine only gets about two hours sleep before she has to start getting up and down over night. She tends to sleep for about two hours most days.

Activity
Charmaine was using a stick and had a marked limp when she visited me today. She doesn't seem to do much around the house and her partner seems to do all the chores and child care. Charmaine accesses several Courses through Ballendon House which she has been attending for about 2 ½ years. She loves going to these Courses, particularly dress making and sewing classes.

She stated she has a mobility scooter to help her get out and about.

PSYCHO
Distress
Charmaine scored highly on the Depression and Anxiety scales of the questionnaire she filled in before attending. She rated her Depression as being 7/10 currently with 10 being the worst she could imagine. She stated that she felt that that was normal for her.

Charmaine stated she will be discharged from Ballendon House in February as she will have then been attending for three years and she is quite worried about this as she has had a huge amount of support there. She stated she has recently been discharged by her C.P.N. and she stated it was because she was being looked after by the Pain Clinic now.

Charmaine reported marked Anxiety although she had learnt some strategies for this and she stated that she tries to avoid ruminating and just gets on with things. She reports panic attacks for which she uses some breathing techniques.

Attitudes & Beliefs
Charmaine understands that she has nerve pain. She thinks that doctors in general are not interested in her pain. She is upset that she has been refused medication to help lose weight. She stated she has tried lots of ways herself to lose weight but this has been unsuccessful. She feels if she could lose weight then that would help her situation a lot. She did not seem to have any maladaptive beliefs along the lines of ongoing pain equating with new damage.
SOCIAL/
Environment
Charmaine lives with her partner and his son aged 22, her own son aged 11 ½ and daughter aged 8. She has no concerns about her children. I did not enquire about her past but I see from her TRAK notes that she had a very difficult childhood and some difficult relationships as an adult.

CONCLUSION
Charmaine is a lady with ongoing Mental Health problems and ongoing low back and bilateral leg pain of a neuropathic nature. She is quite anxious about the forthcoming termination of her contact with Ballendon House. She does however have a plan for the future- she is going to go into a dress making business with a friend. She was reasonably realistic about what Pain Management could offer although she does want her pain to reduce and she wants to lose weight before she can achieve certain things and this is perhaps not realistic.
She reported that she has done some Relaxation in the past. It hasn't been progressive muscle relaxation so this is certainly something that we can try. She could do with learning to pace her

sitting as she over-sits and it might be possible to introduce an exercise and stretch programme. Hydrotherapy might be an option and I shall explore that more with her at her next appointment.

I shall see her individually for a few sessions and she will probably not progress into our Group based Pain Management Programmes as I don't feel that she is appropriate for them.

Yours sincerely

S Murray

Dear Craig

Re: Mrs Charmaine McDonald, 69 Gilmerton Dykes Crescent, EH17 8JP
CHI: 311279 1401

Following Mrs McDonald's assessment here in October 2012, she returned for two follow-up appointments. I tried to address pacing with her but she was very vague and contradictory and ultimately I couldn't actually get an accurate feel of what her activity levels were. I introduced her to a relaxation CD but she stated that she had a very similar one at home. I offered her Hydrotherapy but she didn't wish this due to embarrassment about her weight.

She did seem to be very enthusiastic about exercising so I introduced her to some basic lumbar spine mobility exercises which I was planning to progress and introduce her to some gym equipment. However she failed to come back for her third appointment and didn't contact us so she is therefore now discharged.

Yours sincerely

S Murray

NOTES TO ALL HEALTH PRACTITIONERS
(DOCTORS, DENTISTS, NURSES, PROFESSIONS ALLIED TO MEDICINE)

A patient has an absolute legal right to grant or withhold consent prior to examination or treatment. Patients should be given sufficient information, in a way that they can understand, about the proposed treatment and the possible alternatives. Patients must be allowed to decide whether they will agree to the treatment and they may refuse or withdraw consent to the treatment at any time. The patient's consent to treatment should be recorded on this consent form (further guidance is given in the Trust Policy Statement).

NOTES TO PATIENTS

The health practitioner is here to help you. He or she will explain the proposed treatment and what the alternatives are. You can ask any questions and seek further information. You can refuse treatment.

You should be provided with sufficient information to allow you to come to a decision as to whether to consent to the treatment proposed. The type of information you should receive should include:

I. Nature of your condition & proposed procedures, including degree of urgency
II. Benefits to be reasonably accepted of the procedure
III. Nature & probability of material (= significant) risks involved, including consideration of ratio of risks and benefits
IV. Inability of the practitioner to predict results
V. Irreversibility of the procedure, if that is the case
VI. The likely result of not having the proposed treatment or procedure
VII. Alternatives available, including their risks and benefits

You may ask for a relative, a friend or a nurse to be present.

Training doctors, dentists, nurses and other health professionals is essential to the continuatior of the health service and improving the quality of care. Your treatment may provide an important opportunity for such training, where necessary under the careful supervision of a senior doctor, dentist, nurse or other health professional.

You may however decline to be involved in the formal training of medical, dental, nursing and other students without this adversely affecting your care and treatment. You must tell a senior doctor or nurse if you do not wish students to be involved in your care and you should write this on the consent form in the space for things that you do not wish to happen without your being given the chance to consider them first.

NOTES TO ALL HEALTH PRACTITIONERS
(DOCTORS, DENTISTS, NURSES, PROFESSIONS ALLIED TO MEDICINE)

A patient has an absolute legal right to grant or withhold consent prior to examination or treatment. Patients should be given sufficient information, in a way that they can understand, about the proposed treatment and the possible alternatives. Patients must be allowed to decide whether they will agree to the treatment and they may refuse or withdraw consent to the treatment at any time. The patient's consent to treatment should be recorded on this consent form (further guidance is given in the Trust Policy Statement).

NOTES TO PATIENTS

The health practitioner is here to help you. He or she will explain the proposed treatment and what the alternatives are. You can ask any questions and seek further information. You can refuse treatment.

You should be provided with sufficient information to allow you to come to a decision as to whether to consent to the treatment proposed. The type of information you should receive should include:

I. Nature of your condition & proposed procedures, including degree of urgency
II. Benefits to be reasonably accepted of the procedure
III. Nature & probability of material (= significant) risks involved, including consideration of ratio of risks and benefits
IV. Inability of the practitioner to predict results
V. Irreversibility of the procedure, if that is the case
VI. The likely result of not having the proposed treatment or procedure
VII. Alternatives available, including their risks and benefits

You may ask for a relative, a friend or a nurse to be present.

Training doctors, dentists, nurses and other health professionals is essential to the continuation of the health service and improving the quality of care. Your treatment may provide an important opportunity for such training, where necessary under the careful supervision of a senior doctor, dentist, nurse or other health professional.

You may however decline to be involved in the formal training of medical, dental, nursing and other students without this adversely affecting your care and treatment. You must tell a senior doctor or nurse if you do not wish students to be involved in your care and you should write this on the consent form in the space for things that you do not wish to happen without your being given the chance to consider them first.

Consultant or health professional responsible for your care

Name and job title: Dr. IAN MARRIS

Any special needs of the patient? (e.g. help with communication?)

A Name of proposed procedure or course of treatment

(include brief explanation if medical term not clear)
Please circle: Patient's **LEFT / RIGHT** side or **N/A**

(RIGHT) TRANSFORAMINAL L5/S1.
NERVE ROOT INJECTION

B Statement of health professional (details of treatment, risks and benefits)

1 With **appropriate knowledge of the proposed procedure**, I have explained the procedure to the patient. In particular, I have explained:

a) the intended benefits of the procedure. (please state)

PAIN RELIEF

b) the possible risks involved. I have discussed and listed below significant, unavoidable or frequently occuring risks including any risks that may be of specific concern to the patient:

BRUISE COMMON

COVID RISK UNKNOWN

c) what the benefits and risks of alternative treatments that might be offered for this patient (including option of no treatment):

d) any extra procedures that might become necessary during the procedure such as:
Blood transfusion ☐ or Other procedure (please state):

2 The following patient information leaflet has been provided:

_____ Version No.: _____

or I have offered the patient information about the procedure but this has been declined ☐
or no further written information ☐

3 This procedure will involve:
General and/or regional anaesthesia ☐ Local anaesthesia ☐ Sedation ☐ None ☐

Signed (Health professional): _____ Date: 6 Feb 21

Name (PRINT): MARCH Time (24hr): _____

Designation: _____ Contact/bleep no: _____

C Consent of patient/person with parental responsibility

Photography, Audio or Visual Recording

a) **I agree** to the use of any of the above type of recordings for the purpose of diagnosis and treatment. **YES / NO**

b) **I agree** to unidentified versions of any of the above recordings being used for audit and medical teaching in a healthcare setting. **YES / NO**

Medical Training
I agree to the involvement of medical and other students as part of their formal training.
YES / NO

Use of Tissue

a) **I agree** that tissue (including blood) removed as part of my routine care but not needed for my own diagnosis or treatment can be used and stored for BioResource which may include genetic analysis **YES / NO**
I have received the patient information sheet about the BioResource **YES / NO**

b) Where additional clinical information is needed for the purpose of ethically approved research, I agree that relevant sections of my medical record may be looked at and anonymised prior to release to researchers **YES / NO**

I have listed below any procedures that **I do not wish to be carried out without further discussion.**

_____

_____

_____

_____

I confirm that the risks, benefits and alternatives of this procedure have been discussed with me and that my questions have been answered to my satisfaction and understanding.

I have read and understood information given to me about the planned procedure.

I wish to proceed with the planned procedure.

I therefore give my consent to the procedure as described

OTHER MEDICINE CHARTS IN USE		PREVIOUS ADVERSE REACTIONS This section must be completed before any medicine is given.		Completed by (sign & print)	Date
Date	Type of Chart	None known ☐			
		Medicine / Agent	Description of reaction		
		Penicillin	swelling/rash	Reynolds	12/5/ES

- Write clearly in block capitals, using a black ballpoint pen
- Use approved names for medicines
- Never alter a prescription
- Route of administration

The only acceptable abbreviations are:

IV	- intravenous	SL	- sublingual	NG	- nasogastric
IM	- intramuscular	PR	- per rectum	ID	- intradermal
SC	- subcutaneous	PV	- per vagina	TOP	- topical
INHAL	- inhaled	NEB	- nebulised		

Never abbreviate ORAL or INTRATHECAL
Specify RIGHT or LEFT for eye and ear preparations

- Write the medicine dose clearly
  - The only acceptable abbreviations are:
    g - gram mg - milligram ml - millilitre
    all other doses must be written out in full eg. micrograms
  - Avoid decimal points eg. 100 micrograms (not 0.1mg). If unavoidable, write zero in front of the decimal point
  - Prescribe liquids by writing the dose in mg
  - For 'as required' medicines, state the symptoms to be relieved, the minimum time interval between doses and the maximum daily dose
  - Write units as 'units' not 'iu'

ONCE ONLY

Date	Time	Medicine (Approved Name)	Dose	Route	Prescriber - Sign + Print	Time Given	Given By

Specialty:	Gynaecology	**Consultant:**	Prof HD Critchley

Thank you very much for referring this 25 year old para 4 to Professor Critchley's clinic requesting sterilisation. As you are aware, she has been using Depo Provera up until the end of January of this year. However, this has now run out and she is not using any contraception at present. She has four children, the two eldest children live with her previous partner's mother. However, she feels certain her family is complete.

We discussed sterilisation. She is aware of the failure rate of 1:200 and the increased risk of ectopic pregnancy, the irreversible nature of the procedure and the risks of laparoscopy. We discussed alternative contraception - the Mirena, Implanon and vasectomy, however she is adamant that she wishes to be sterilised.

I have discussed her case with Professor Critchley, and she is happy in view of the fact that she has four children already to carry out laparoscopic sterilisation, and she has been placed on the waiting list for this. In the meantime I have discussed her contraception again with her today, and she will attend yourself for further Depo Provera.

Yours sincerely

Dr C. Black

Specialty:	Dermatology	**Consultant:**	Dr VR Doherty

Thank you for your urgent referral of this lady regarding a lesion on her left forearm. She had been aware of having a lesion since childhood and over a number of years she has had a history of recurring inflammation related to this lesion. The lesion becomes swollen, itchy and sometimes releases some pusy fluid.

She has no past history or risk factory of great note. She previously was a sunbed user.

On examination today she had a flesh coloured nodule on her arm, which would be in keeping with an area of prurigo.

Given her very clear history of the lesion fluctuating and being itchy, the likelihood of any form of malignancy would seem very low.

In the first instance I have suggested that she use a dressing and some Synalar cream over the area to reduce itching and reduce the risk of her continuing to scratch the area.

I have not arranged for her to come backwards and forwards to the clinic. We would obviously be happy to see her in the future in the event of any further concern.

With best wishes,

Yours sincerely

Dr Val R Doherty

I reviewed this 30 year old patient in Mr Ross' clinic. She had a lumbar radiculopathy in May 2010 and had an L4/5 microdiscectomy. Today in clinic she was mobilising with a walking stick but she tells me that her leg pains have improved significantly and she has normal sensation in the left leg, and almost normal sensation in the right leg. She had no problems with her bladder or bowel function and her she also feels her back pain is beginning to settle although she still needs a walking stick. I was delighted to see that she had improved. I have reassured her that she has had good recovery from the operation and have discharged her from clinic with no further follow up.

Yours sincerely,

Mr I Liaquat

I saw Charmaine in the clinic today. As you know she had a previous L4/5 microdiscectomy which resulted in some improvement of her right sided sciatica and complete resolution of her left sided sciatica.

However, over the last nine months she has had a recurrence of her right sided sciatica going down to her right ankle. In addition she has numbness in both feet although the pain is predominantly down to her ankle on the lateral edge of her right foot.

She is currently taking Dihydrocodeine, Paracetamol, Ibuprofen and Amitriptyline with intermittent Diazepam.

Her repeat MRI scan shows a well decompressed L5 root with a very small lateral prolapse at the L4/5 level but certainly much improved from pre-operatively.

I think that she may have some nerve root compression from this lateral component of the disc and I am going to arrange a right L5 nerve root injection. In addition, I would like her to see our pain specialists here because obviously she is struggling with getting appropriate analgesia and I don't think that further surgery is going to improve things significantly. The one addition which may be valuable would be that of a long acting Opiate instead of the Dihydrocodeine but I will leave that in your hands to decide upon. I will make arrangements for the other specialists to see her and will catch up with her next year.

Yours sincerely

I wonder if you would be kind enough to see this pleasant lady who has severe right sided sciatica. She has had a L4/5 discectomy and the scan looks much improved but her pain unfortunately is not significantly better although there was a period where things were improved.

You will see from my letter that she is on extensive medications and I have arranged a right L5 nerve root injection in case there is still a minor right sided compressive portion to her problems but I would be really grateful for your input.

I would be most grateful if this lady could have a right L5 nerve root injection.

She has had a L4/5 discectomy which improved her symptoms significantly and resolved her left sided symptoms. Unfortunately her symptoms have recurred, particularly on the right side and there is no major disc prolapse for a direct surgical approach. There is a small residual lateral disc on the right at L4/5 and I wonder if a right L5 nerve root injection may improve her symptoms.

Many thanks for your help.

I saw Charmaine Macdonald in the Pain Clinic today following referral from yourself. She has problems with left leg pain following an L4/5 discectomy. She has had an L5 nerve root injection in February and this produced some improvement in her symptoms.

I have prescribed her Pregabalin to see if this helps with the neuropathic symptoms at a dose of 75 mgs twice daily increasing to 300 mgs twice daily. I have also advised her to try Capsaicin 0.025% cream applied to the lower leg area. I plan to see her again in approximately three months' time.

I saw Charmaine in the Pain Clinic today. She has problems with neuropathic pain in her left leg following from a 4/5 discectomy. She describes some initial improvement from commencing Pregabalin however this also corresponded with the time when she had a nerve root injection so it is difficult to determine what produced the benefit. Unfortunately now her symptoms have returned. She currently takes Pregabalin at a dose of 300 mgs twice daily and I would be grateful if you could increase this to 300 mgs in the morning and 450 mgs at night. She tells me her mood is low, she feels frustrated and irritable and feels that the pain problem is taking over her life. In terms of improving her outlook and also as another inroad into her neuropathic pain, a trial of Duloxetine 60 mgs daily might prove helpful. I will book her in for a pulsed RF of her nerve root to see if we can achieve a more sustained effect in terms of pain reduction. Additionally she has not had any physiotherapy input for twelve months and this was practice-based. She would benefit from more specialised pain physiotherapy input and I will refer her to our Pain Clinic physiotherapists for this at the Astley Ainslie Hospital.

I would be grateful if you could assess this young woman who has problems with neuropathic pain in her left leg following an L4/5 discectomy. I have commenced her on various anti-neuropathic drugs but this has produced little so far in terms of improvement. Additionally I am planning to see her for a pulsed radiofrequency ablation of the nerve root to see if this proves helpful. She last had physiotherapy approximately twelve months ago through her GP but I feel would benefit from more specialised pain physiotherapy as she has unfortunately entered the cycle of low mood, frustration and sleep disturbance. I enclose a copy of the original clinic letter with some additional information.

Diagnosis
Left hand soft tissue injury left scaphoid. date of injury 26 January 2013.

Plan
Discharged from clinic, for physiotherapy.

This 33 year old lady sustained the above-named injury when she fell on her left hand. History includes back pain post-back surgery.

On examination tender over the scaphoid and anatomical snuffbox with pain on radial ulnar deviation. Complains of numbness in ulnar nerve distribution, though power is normal.

X-rays done today did not reveal any scaphoid fracture.

This lady has a soft tissue injury. Plan is for her to continue her wrist splints. To see the physiotherapist, and reassured her there is no fracture pain. Her pain has gradually subsided. We have not planned any formal follow up for her.

Patient:	Miss Charmaine McDonald Flat 4 5 Matthew Street Edinburgh EH16 4GZ	**UHPI:** **Date of Birth:**	600091165X 31/12/1979
Specialty:	Chronic Pain	**Consultant:**	Dr Craig A Grice (EDIN Clinic)

I reviewed Mrs McDonald in the Pain Clinic on 9th May 2013. She had a pulsed radiofrequency ablation at the L5 nerve root at the beginning of March 2013. I am pleased to say that she has had a 50% improvement in her pain overall and described increased mobility and activity levels.

She is currently taking Duloxetine 60mgs, Amitriptyline 75mgs, Pregabalin 300mgs in the morning and 450mgs at night and Dihydrocodeine slow release 90mgs twice daily. I have advised her to continue her activity levels and also continue with her physiotherapy-based exercises. She tells me that she also attended a weight loss programme and has lost some weight which will obviously help things overall. I plan to see her again in approximately 6 months time.

Yours sincerely

I reviewed Mrs McDonald in the Pain Clinic on 21st November 2013. I am pleased to say that she continues to have significant reduction in her pain levels. She is walking without a stick now and her activity and mobility levels have increased. I have reinforced the message for her to increase these further with regular exercise. I feel she should continue with her current medication as it stands, which is Duloxetine 60mgs; Amitriptyline 75mgs; Pregabalin 300mgs in the morning and 450mgs at night & Dihydrocodeine slow release 90mgs twice daily. She knows to contact me if she requires a further nerve root injection should this be required, but I will see her again routinely in 6 months time where we will continue to further reduce her medication.

Yours sincerely

Patient:	Miss Charmaine McDonald Flat 4 5 Matthew Street Edinburgh EH16 4GZ	**UHPI:** **Date of Birth:**	600091165X 31/12/1979
Specialty:	Chronic Pain	**Consultant:**	Dr Craig A Grice (EDIN Clinic)

I reviewed this lady in the pain clinic who has considerably improved since her initial referral. She had problems with low back and right leg pain secondary to nerve root irritation.

She complains of some worsening of symptoms in terms of the hot stabbing pains at the top of her right buttock and also some pins and needles in her right foot and occasional shooting pain down the right leg.

Since her last attendance she has stopped pregabalin and also considerably reduced her amitriptyline to 25 mgs at night.

She attends the gym on a regular basis and carries out her physiotherapy exercises on a daily basis.

My overall impression is this is probably just a normal variation in her nerve root symptoms and Charmaine herself feels it is not a significant deterioration in her clinical condition.

I would recommend restarting her on some pregabalin at a dose of 150 mgs at night in the first week, 75 mgs in the morning and 150 mgs at night for the second week and to continue with this for the next few months.

I have asked our clinical nurse specialist to see her in the medication review clinic to see how she is getting on with the change.

Yours sincerely

I saw Charmaine McDonald in my nurse-led Medication Review Clinic this morning. Charmaine continues on Dihydrocodeine long-acting 90 mgs twice daily and she has now stopped the Amitriptyline. At her last appointment here with Dr Grice he had suggested she could restart the Pregabalin, however Charmaine has not done this as she is now back at work and always found that the Pregabalin sedated her quite badly even at a small dosage. She has continued to do well. She has lost five and a half stone in weight and continues with exercises given to her by physios. She does continue to have shooting pains mainly in her right leg and would be quite keen to be considered for repeat radiofrequency injections. Dr Grice had performed these well over a year ago and she did have very good benefit. I will let Dr Grice know how Charmaine is getting on and he will possibly see her again for repeat injection and we will be in touch with Charmaine in due course.

Today I performed a right L5 nerve root injection using local anaesthetic and steroid. I also carried out some pulsed radiofrequency lesioning to the nerve root. The procedure was uneventful and she was discharged home. I will contact Charmaine in approximately one month's time to see how she is progressing.

Thank you for your letter regarding this patient. I am glad to hear that the L5 nerve root and the radiofrequency lesioning have helped. In terms of reducing dihydrocodeine a regime of reduction over several months by approximately 30 mgs per month would be my recommendation. In this situation it is better to do this slowly over several months. Other than that I have little else to offer.

Dear Doctor,

DIAGNOSIS
1. Ruptured haemorrhagic cyst

Your patient was reviewed in Gynaecology triage, RIE on 21/03/2024.

She presented with a 3 day history of sudden onset, sharp LIF pain, she denied any associated changes to her bowel or new urinary symptoms. She denied any fever, nausea or vomiting. There was no associated irregular PV bleeding or discharge.

She is P4+0, with 4 previous vaginal deliveries with a regular cycle (5/28-30)with no intermenstrual/ post coital bleeding. She has not had a smear test for over 20 years having had previous colposcopy for an abnormal smear.

She has a past medical history of chronic lower back pain and previous laparoscopic sterilisation.

Examination revealed a soft abdomen with mild LIF tenderness sonly, normal vagina and cervix and no adnexal masses with only mild adnexal tenderness on deep palpation. A smear test was taken.

INVESTIGATIONS
Bloods: NAD
Urine: NAD
Pelvic US: The anteverted uterus appears normal in shape size and position measuring 87x57x54mm. The endometrial cavity appears clear with an AP diameter of 13mm. The right ovary appears normal.

Within the left ovary there is a collapsing haemhorragic cyst this measures 19x21x21mm.
No further adnexal masses or free fluid seen.
Swabs: outstanding

She was discharged with strong worsening advice with no changes to her regular medications.

FOLLOW-UP
Discharge to care of GP

Should you require any further information please contact Gynae Triage, Simpsons Centre for Reproductive Health, RIE. (0131 242 2551)

Information in this letter has been discussed with the patient.

Dear Doctor,

Charmaine was reviewed in Gynaecology Triage on 15/05/25. She had been seen overnight in 210 and returned for a pelvic USS. She presented with LIF pain and PV bleeding. On exam she had a healthy cervix and very mild bleeding from the os, with no clots. She had a pelvic USS which showed new uterine fibroids. A pipelle biopsy was performed. Her bleeding had settled so she was discharged without any medications.

Subsequently her swabs came back positive for bacterial vaginosis. She preferred a stat dose of metronidazole to 5-day course and collected this from ward 210 a few days later.

Her pathology results will be followed up.

Many thanks for your ongoing care.

I am writing to you with the results of the biopsy recently taken from the lining of the womb. I am pleased to confirm it was all benign, which is very reassuring. I am glad the bleeding has settled and that you got on well with your course of antibiotics for the bacterial vaginosis. I wish you all the best for the future.

With kind regards,

Yours sincerely

Clinical details

Report
The appearances are virtually identical to those on the scan of 29.01.2010.

There is a small disc bulge at L3/4. It contains a high signal intensity zone in its posterior annulus and indents the dural sac. It does not compress nerve roots.

Large L4/5 disc bulge that is more prominent to the right of midline. It compresses the right L5 nerve root and causes minor compression of the left L5 nerve root.

Posterior disc bulge at L5/S1 that touches but does not compress the S1 roots.

Degenerative disc disease at L4/5/S1 including disc narrowing and dehydration and endplate changes

No evidence of disc prolapse or stenosis at other levels.

Normal conus and cauda equina.

Retroverted uterus. Large bladder.

Ref Via Mr Liquat.

Result

Clinical details

Report
The appearances are virtually identical to those on the scan of 29.01.2010.

There is a small disc bulge at L3/4. It contains a high signal intensity zone in its posterior annulus and indents the dural sac. It does not compress nerve roots.

Large L4/5 disc bulge that is more prominent to the right of midline. It compresses the right L5 nerve root and causes minor compression of the left L5 nerve root.

Posterior disc bulge at L5/S1 that touches but does not compress the S1 roots.

Degenerative disc disease at L4/5/S1 including disc narrowing and dehydration and endplate changes

No evidence of disc prolapse or stenosis at other levels.

Normal conus and cauda equina.

Retroverted uterus. Large bladder.

Ref Via Mr Liquat.
Pt to Attend PIU Wed 31/3 @ 10.45

Inpatient Discharge Summary

DIAGNOSIS: Lumbar radiculopathy (M51.1)
PROCEDURE: None
FOLLOW-UP: To be readmitted for surgery in due course

SUMMARY:
This 30 year old lady was referred to the neurosurgical department on 25th March 2010 and was reviewed in PIU on 31st March 2010. She has been suffering with low back pain and bilateral sciatica since November 2009. The pain is constant and on the right side it goes as far as the little toe and on the left side the pain radiates to the heel. The pain is worse in her back compared to her legs. It is not relieved or exacerbated by changing posture. Charmaine was also complaining of paraesthesia affecting both lower limbs and occasional post micturition dribbling for a few months.

The patient is smoker, had problems with depression in the past and has four children. She takes Cocodamol, Ibuprofen and Mirtazepine.

On examination straight leg raising was limited to approximately 40 degrees bilaterally because of severe back pain but the sciatic nerve stretch test was negative. Power, sensation, tone and reflexes were normal in both lower limbs.

She underwent two MRI scans of her lumbar spine, the first in January and the second in March 2010. The MRI images were virtually identical. At L4/5 level there is a disc bulge that compresses the right L5 nerve root and causes minor compression of the left L5 nerve root. There is a smaller posterior disc bulge at L5/S1 level that touches but does not compress the S1 roots. I explained to the patient she will most likely need to be put on the waiting list for L4/5 discectomy. I have discussed the patient with Mr Ross, Consultant in charge, who has agreed to place this lady's name on the waiting list for L4/5 discectomy.

Yours sincerely,

Mr N Stavrinos
Specialty Doctor in Neurosurgery

PAIN SCORE
- 0 NONE — Continue to assess pain with every set of observations
- 1-3 MILD — Continue to assess pain with every set of observations
- 4-5 MODERATE — Assess. Using guidelines, prescribe/give analgesia as appropriate for the patient. Review
- 6-10 SEVERE — Assess. Using guidelines, prescribe/give analgesia as appropriate for the patient. Review

NAUSEA SCORE
- 0 No Nausea
- 1 Nausea (consider anti-emetic)
- 2 Nausea/vomiting (administer anti-emetic)
- 3 Persistent nausea and/or vomiting (contact Doctor)

SEDATION SCORE
- 0 None, patient alert
- 1 Mild, occ drowsy, easy to rouse
- 2 Mod, frequently drowsy, easy to rouse
- 3 Severe, somnolent, difficult to rouse
- S Normal sleep, stirs to light touch
- U Unconscious

RECOVERY COMMENTS

Uneventful extubation in recovery.
moving all limbs well.

Wound dry

Pain in leg. morphine given with effect.

Tolerating oral fluids.

BPV - Spoke with Dr Robson. Instructed to give bag of Hartmans stat.

THIS IS AN INTEGRATED CARE PATHWAY (ICP).

- It incorporates the present guidelines & practice that most commonly occurs for patients presenting for this treatment.
- It is an ***Interdisciplinary*** tool – therefore any member of the multidisciplinary team can use it to monitor progress / record variances.
- It is intended for use throughout each 24-hour period.
- If a patient does not receive any of the care / investigations listed this needs to be recorded as a variance. Variances are to be expected, not all patients follow the same pathway.
- The idea behind the pathway is consistency of care, enhanced continuity and accurate recording of care / investigations. It will also allow care to be better evaluated.

PLEASE NOTE:
A Care Pathway is intended to act as a guide to treatment and an aid to documenting a patient's progress. Clinicians are free to exercise their own professional judgements as appropriate. **However, any alteration to the practice identified within this ICP should be noted as a Variance.**

GUIDELINES FOR ICP USE:

Once staff have completed an entry on the signature sheet (located on page 2) only a set of initials is required to be used throughout this document. This will be taken as confirmation that that aspect of care has been completed.

For more detail about treatment: please refer to the relevant guidelines and protocols.

SUMMARY

30 ♀ student with 6/12 history of back & bilateral leg pain radiating to thigh, calf & lateral sole of feet.

Occasional urinary urgency & perineal numbness.

MRI - L4/5 disc bulge compressing (L) L5 nerve root + small bulge L5/S1 not compressing S1 root.

DIAGNOSIS · DIFFERENTIAL DIAGNOSIS

L5 + ? S1 radiculopathies

INVESTIGATIONS and MANAGEMENT

Routine bloods + CRP.

Anaesthetic review.

Nicotine Patch.

APPENDIX 2: OSWESTRY DISABILITY INDEX 2.0 (Fairbanks et al)

OSWESTRY DISABILITY INDEX 2.0

Section 1: Pain Intensity

I can tolerate the pain I have without having to use pain killers. [0 points]

The pain is bad but I manage without taking pain killers. [1 point]

Pain killers give complete relief from pain . [2 points]

Pain killers give moderate relief from pain. [3 points]

Pain killers give very little relief from pain. [4 points]

Pain killers have no effect on the pain and I do not use them. [5 points]

Section 2: Personal Care

I can look after myself normally without causing extra pain. [0 points]

I can look after myself normally but it causes extra pain. [1 point]

It is painful to look after myself and I am slow and careful. [2 points]

I need some help but manage most of my personal care. [3 points]

I need help every day in most aspects of self care. [4 points]

I do not get dressed wash with difficulty and stay in bed. [5 points]

Section 3: Lifting

I can lift heavy weights without extra pain. [0 points]

I can lift heavy weights but it gives extra pain. [1 point]

Pain prevents me from lifting heavy weights off the floor but I can manage if they are conveniently positioned for example on a table. [2 points]

Pain prevents me from lifting heavy weights but I can manage light to medium weights if they are conveniently positioned. [3 points]

I can lift only very light weights. [4 points]

I cannot lift or carry anything at all. [5 points]

Section 4: Walking (bad question)

Pain does not prevent me walking any distance. [0 points]

Pain prevents me walking more than 1 mile. [1 point]

Pain prevents me walking more than 0.5 miles. [2 points]

Pain prevents me walking more than 0.25 miles. [3 points]

I can only walk using a stick or crutches. [4 points]

I am in bed most of the time and have to crawl to the toilet. [5 points]

Section 6: Standing (Remember, standing is NOT walking.)

I can stand as long as I want without extra pain. [0 points]

I can stand as long as I want but it gives me extra pain. [1 point]

Pain prevents me from standing for more than 1 hour. [2 points]

Pain prevents me from standing for more than 30 minutes. [3 points]

Pain prevents me from standing for more than 10 minutes. [4 points]

Pain prevents me from standing at all. [5 points]

Section 7: Sleeping

Pain does not prevent me from sleeping well. [0 points]

I can sleep well only by using tablets. [1 point]

Even when I take tablets I have less than 6 hours sleep. [2 points]

Even when I take tablets I have less than 4 hours sleep. [3 points]

Even when I take tablets I have less than 2 hours of sleep. [4 points]

Pain prevents me from sleeping at all. [5 points]

Section 8: Sex Life (by pain = for fear of causing pain)

My sex life is normal and causes no extra pain. [0 points]

My sex life is normal but causes some extra pain. [1 point]

My sex life is nearly normal but is very painful. [2 points]

My sex life is severely restricted by pain. [3 points]

My sex life is nearly absent because of pain. [4 points]

Pain prevents any sex life at all. [5 points]

Section 9: Social Life

My social life is normal and gives me no extra pain. [0 points]

My social life is normal but increases the degree of pain. [1 point]

Pain has no significant effect on my social life apart from limiting energetic interests such as dancing. [2 points]

Pain has restricted my social life and I do not go out as often. [3 points]

Pain has restricted my social life to my home. [4 points]

	I have no social life because of pain. [5 points]
Section 5: Sitting ("Favourite chair" includes a recliner.) I can sit in any chair as long as I like. [0 points] I can only sit in my favourite chair as long as I like. [1 point] Pain prevents me sitting more than 1 hour. [2 points] Pain prevents me from sitting more than 0.5 hours. [3 points] Pain prevents me from sitting more than 10 minutes. [4 points] Pain prevents me from sitting at all. [5 points]	**Section 10: Travelling** I can travel anywhere without extra pain. [0 points] I can travel anywhere but it gives me extra pain. [1 point] Pain is bad but I manage journeys over 2 hours. [2 points] Pain restricts me to journeys of less than 1 hour. [3 points] Pain restricts me to short necessary journeys under 30 minutes. [4 points] Pain prevents me from travelling except to the doctor or hospital. [5 points]

INTERPRETATION:

Now, simply add up your points for each section and plug it in to the following formula in order to calculate your level of disability: **point total / 50 X 100 = % disability (aka: 'point total' divided by '50' multiply by ' 100 = percent disability)**

For example: my Current level of disability, 11-11-04 is calculated as follows:
14 / 50 X 100 = 28%

ODI SCORING:

0% to 20%: minimal disability: The patient can cope with most living activities. Usually no treatment is indicated apart from advice on lifting sitting and exercise.

21%-40%: moderate disability: The patient experiences more pain and difficulty with sitting lifting and standing. Travel and social life are more difficult and they may be disabled from work. Personal care sexual activity and sleeping are not grossly affected and the patient can usually be managed by conservative means.

41%-60%: severe disability: Pain remains the main problem in this group but activities of daily living are affected. These patients require a detailed investigation.

61%-80%: crippled: Back pain impinges on all aspects of the patient's life. Positive intervention is required.

81%-100%: These patients are either bed-bound or exaggerating their symptoms.

REGULAR THERAPY

- **Write clearly in block capitals, using a black ballpoint pen**
- **Use approved names for medicines**
- **Never alter a prescription**
- **Route of administration**
  - The only acceptable abbreviations are:
    IV - intravenous SL - sublingual NG - nasogastric
    IM - intramuscular PR - per rectum ID - intradermal
    SC - subcutaneous PV - per vagina TOP - topical
    INHAL - inhaled NEB - nebulised
  - Never abbreviate ORAL or INTRATHECAL
  - Specify RIGHT or LEFT for eye and ear preparations

- **Write the medicine dose clearly**
  - The only acceptable abbreviations are:
    g - gram mg - milligram ml - millilitre
    all other doses must be written out in full e.g. micrograms
  - Avoid decimal points e.g. 100 micrograms (not 0.1 mg) If unavoidable, write zero in front of the decimal point
  - Prescribe liquids by writing the dose in mg
  - For 'as required' medicines, state the symptoms to be relieved, the minimum time interval between doses and the maximum daily dose

Date completed:– **Completed by:–**	

CODES FOR NON-ADMINISTRATION OF PRESCRIBED MEDICINE

If a dose is not administered as prescribed, initial and enter a code in the column with a circle drawn round the code according to the reason as shown below. **Inform the responsible doctor in the appropriate timescale.**

1. Patient refuses
2. Patient not present
3. Medicines not available – CHECK ORDERED
4. Asleep / drowsy
5. Administration route not available – CHECK FOR ALTERNATIVE
6. Vomiting / nausea
7. Time varied on doctor's instructions
8. Once only / as required medicine given
9. Dose withheld on doctor's instructions
10. Possible adverse reaction / side effect

ONCE ONLY

Date	Type of Chart

PREVIOUS ADVERSE DRUG REACTIONS

Medicine	Description of reaction
CO-AMOXICLAV	Rash + Nausea

Name: ..... D.O.B.: .....

REGULAR THERAPY

- **Write clearly in block capitals, using a black ballpoint pen**
- **Use approved names for medicines**
- **Never alter a prescription**
- **Route of administration**
  - The only acceptable abbreviations are:

IV - intravenous	SL - sublingual	NG - nasogastric
IM - intramuscular	PR - per rectum	ID - intradermal
SC - subcutaneous	PV - per vagina	TOP - topical
INHAL - inhaled	NEB - nebulised	

  Never abbreviate ORAL or INTRATHECAL
  Specify RIGHT or LEFT for eye and ear preparations

- **Write the medicine dose clearly**
  - The only acceptable abbreviations are:
    g - gram mg - milligram ml - millilitre
    all other doses must be written out in full e.g. micrograms
  - Avoid decimal points e.g. 100 micrograms (not 0.1 mg) If unavoidable, write zero in front of the decimal point
  - Prescribe liquids by writing the dose in mg
  - For 'as required' medicines, state the symptoms to be relieved, the minimum time interval between doses and the maximum daily dose

CONSENT FORM: Medical or Dental Investigation, Treatment or Operation

Hospital .....

Patient's Surname .....

Other Names .....

Unit Number .....

600091165X F 31/12/1979
McDonald, Charmaine M
69 Gilmerton Dykes Crescent,
Edinburgh,
Midlothian,
EH17 8JP
CHI 3112791401
70376 J Taylor

Sex (tick box) Male ❑ Female ❑ Date of Birth .....

(To be completed by the medical, dental, nursing or paramedical practitioner. See notes)

Type of operation, investigation or treatment for which written evidence of consent is considered appropriate.

L4/5 Microdiscectomy (R) Sided

I confirm that I have explained to the patient in terms which in my judgement are suited to his/her understanding (and/or to one of his/her parents or guardians), the proposed operation, investigation or treatment, including options available, and if relevant, the need for anaesthesia or sedation.

Relevant Written information given to the patient: ❑ Yes ❑ No

Signature ..... Date 20/5/10

Name and Status of Practitioner ..... BSB Cons

Re-confirmation of Consent on the day of admission:

Signature ..... Date .....

Name and Status of Practitioner .....

To the Patient (or Parent or Guardian if Appropriate)

1. **Please read this form and the notes overleaf very carefully.**
2. **If there is anything that you don't understand about the explanation or if you want more information, you should ask the practitioner before signing.**
3. **Please check that all the information on the form is correct. If it is and you understand the explanation, then sign the form.**

I am the ~~patient/parent/guardian~~ patient *(delete as necessary)*

I agree
- ✧ to what is proposed, which has been explained to me by the practitioner named above

I understand
- ✧ that anaesthesia (general/regional/local) or sedation will be needed
- ✧ that the procedure may not be done by the practitioner who has been treating me so far
- ✧ that any procedure in addition to the investigation or treatment described on this form will only be carried out if it is necessary and in my best interests and can be justified for medical reasons

I have told
- ✧ the practitioner about the procedures I have noted below* which I would wish not to be carried out without my having the opportunity to consider them first

NOTES TO ALL HEALTH PRACTITIONERS (DOCTORS, DENTISTS, NURSES, PROFESSIONS ALLIED TO MEDICINE)

A patient has an absolute legal right to grant or withhold consent prior to examination or treatment. Patients should be given sufficient information, in a way that they can understand, about the proposed treatment and the possible alternatives. Patients must be allowed to decide whether they will agree to the treatment and they may refuse or withdraw consent to the treatment at any time. The patient's consent to treatment should be recorded on this consent form (further guidance is given in the Trust Policy Statement).

NOTES TO PATIENTS

The health practitioner is here to help you. He or she will explain the proposed treatment and what the alternatives are. You can ask any questions and seek further information. You can refuse treatment.

You should be provided with sufficient information to allow you to come to a decision as to whether to consent to the treatment proposed. The type of information you should receive should include:

I. Nature of your condition & proposed procedures, including degree of urgency
II. Benefits to be reasonably accepted of the procedure
III. Nature & probability of material (= significant) risks involved, including consideration of ratio of risks and benefits
IV. Inability of the practitioner to predict results
V. Irreversibility of the procedure, if that is the case
VI. The likely result of not having the proposed treatment or procedure
VII. Alternatives available, including their risks and benefits

You may ask for a relative, a friend or a nurse to be present.

Training doctors, dentists, nurses and other health professionals is essential to the continuation of the health service and improving the quality of care. Your treatment may provide an important opportunity for such training, where necessary under the careful supervision of a senior doctor, dentist, nurse or other health professional.

You may however decline to be involved in the formal training of medical, dental, nursing and other students without this adversely affecting your care and treatment. You must tell a senior doctor or nurse if you do not wish students to be involved in your care and you should write this on the consent form in the space for things that you do not wish to happen without your being given the chance to consider them first.

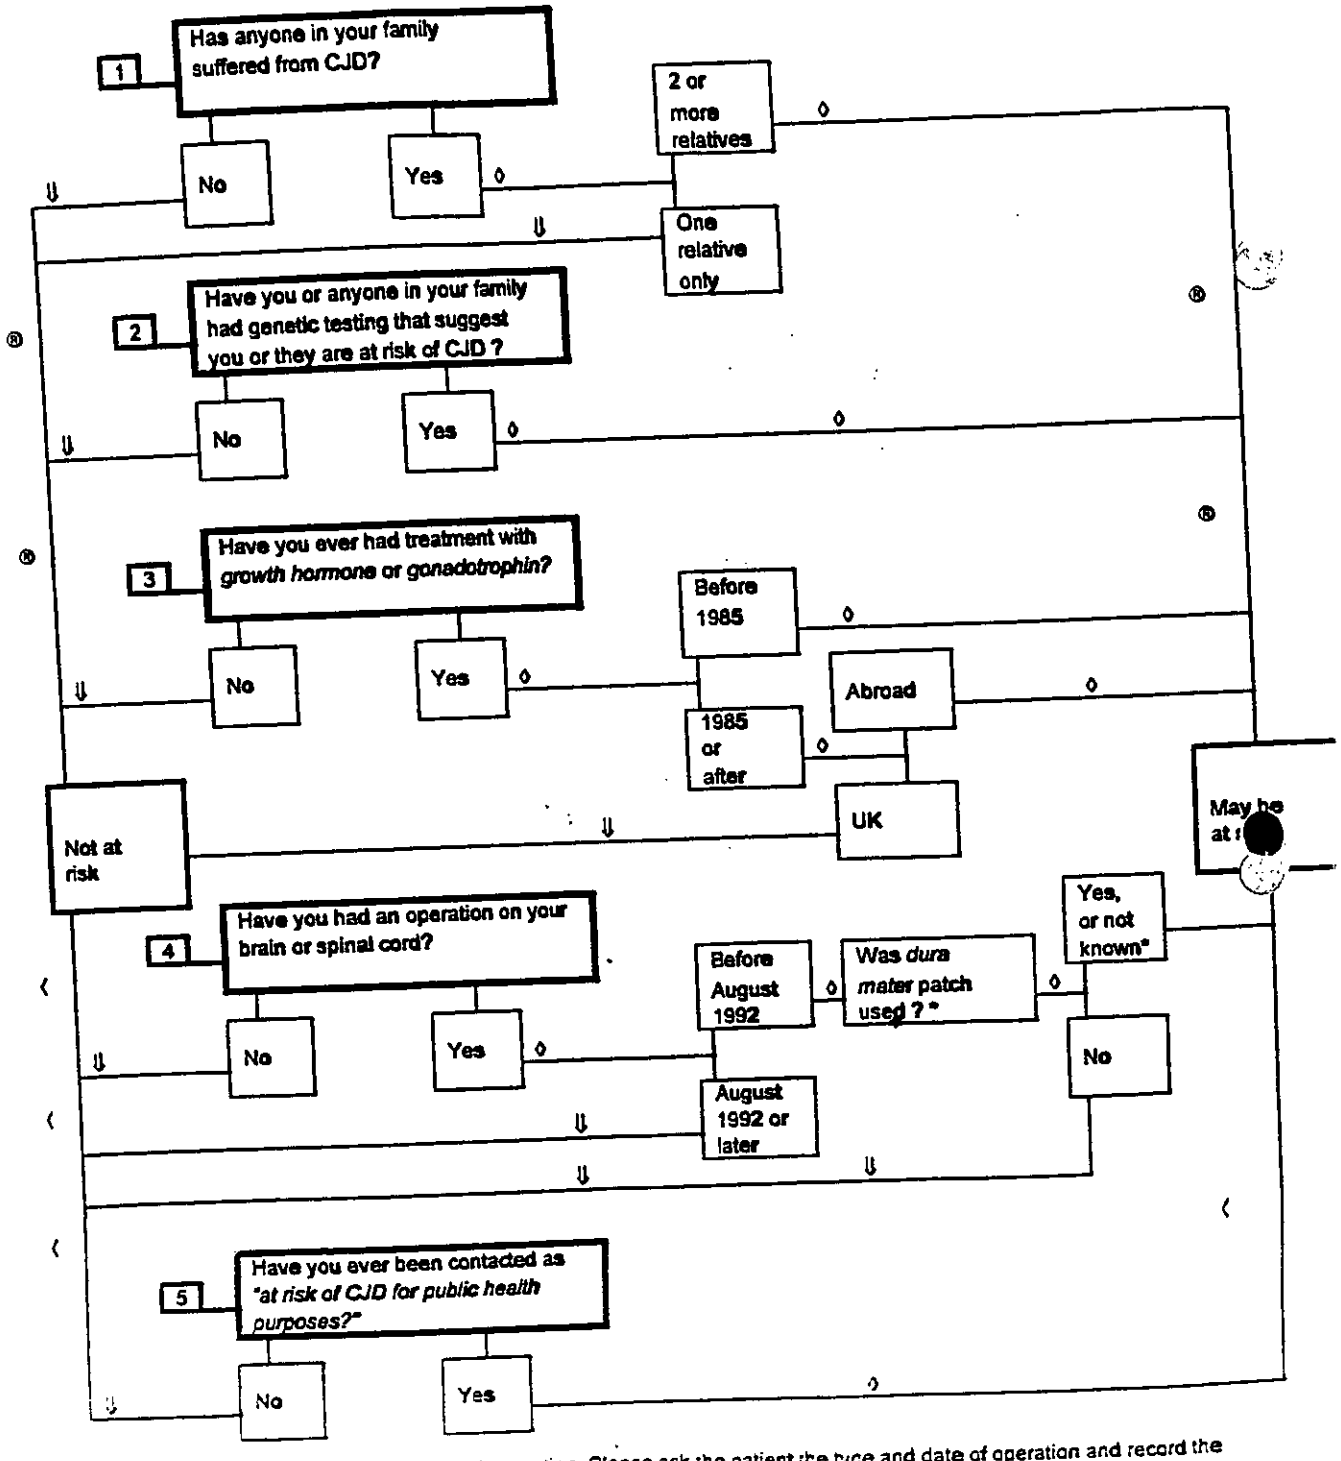
Hospital number:

	Question	Notes to clinician
1	Has anyone in your family suffered from CJD? NO	A patient should be considered to be at risk from familial forms of CJD if they have: • two or more blood relatives affected by CJD or other prion disease.
2	Have you or anyone in your family had genetic testing that suggest you, or they, are at risk of CJD ? NO	A patient should be considered to be at risk from familial forms of CJD if they have: • had genetic testing which has indicated that they are at significant risk of developing CJD or other prion disease. or: • a blood relative known to have a genetic mutation indicative of familial CJD
3	Have you ever received *growth hormone* or *gonadotrophin* treatment? If yes, do you know if this was derived from human pituitary glands? .....NO.....	Patients have been identified as potentially at risk of CJD if they have: • received hormone derived from human pituitary glands, e.g. *growth hormone* or *gonadotrophin*,. In the UK, the use of human-derived growth hormone was discontinued in 1985 but human-derived products may have continued to be used in other countries.
4	Did you have an operation on your brain or spinal cord before August 1992? NO	People who • underwent neuro-surgical procedures or operations for a tumour or cyst of the spine before August 1992 may have received a graft of *dura mater*, and should be treated as at risk (unless evidence can be provided that *dura mater* was not used).
5	Have you ever been contacted as *"at-risk of CJD for public health purposes?"* If yes, please specify. .....NO.....	The CJD Incidents Panel has identified a number of individuals who are potentially at risk of CJD or vCJD for public health purposes .....

Patient name:
Date of birth / CHI number:
Hospital number:

Please ask each of the 5 questions in the bold boxes, follow the flow chart and ring each the patient's answers which will lead to the box indicating risk, or otherwise. (Only approximately 1 in 10,000 patients will be classified as "maybe at risk")



The patient is unlikely to know the answer to this question. Please ask the patient the type and date of operation and record the answer. Neurosurgery will be able to offer an estimate of the likelihood that *dura mater* was used – (Dawn Lowe, Clinical Nurse Manager WGH xt 31202)

Inpatient Discharge Summary

DIAGNOSIS: Lumbar radiculopathy
PROCEDURE: L4 laminotomy and L4/5 right microdiscectomy and medial facetectomy on 20.05.10
FOLLOW-UP: Routine outpatient clinic

HISTORY:
This lady with low back pain and bilateral leg pain since November 2009 was admitted electively for the above procedure. The procedure was uneventful and the leg pain improved significantly postoperatively. Charmaine received early input from physiotherapy and she was discharged home on 25th May with arrangements in place for a follow up appointment at her local Physiotherapy Department. We will see this lady again in the clinic in due course.

Yours sincerely,

Mr N Stavrinos

Dear Dr Duncan

Discharge Drugs

Discharge Medication	Dose	Frequency	Duration	Additional Info
Dihydrocodeine M/R Tablets	90 MG	TWICE DAILY	Long Term	Patient's own at home

Dear Dr Duncan,

Further to this ladies immediate discharge letter she was admitted with a collapse and subsequent "shaking episode", routine bloods on admission were unremarkable as was a Chest X-ray.

These were not felt to represent seizures and she was noted to be having a stressful time prior to admission. She has not received any specific treatment during her admission and was discharged feeling well a couple of days later.

I notice that the urine cultures were positive for Enterococcus which is sensitive to Amoxicillin and Nitrofurantoin. This was sent on the 16th and is documented that she has had no urinary symptoms at the time of admission. Obviously this is now several weeks old and I suspect that it is not clinically relevant, however maybe useful in the future should she represent with urinary symptoms.

Kind regards

Yours sincerely

Dr Anne Jones
Medical Registrar

b) the possible risks involved. I have discussed and listed below significant, unavoidable or frequently occuring risks including any risks that may be of specific concern to the patient:

BRUISE

c) what the benefits and risks of alternative treatments that might be offered for this patient (including option of no treatment):

d) any extra procedures that might become necessary during the procedure such as:
Blood transfusion ☐ or Other procedure (please state):

2 The following patient information leaflet has been provided:

Version No.:

or I have offered the patient information about the procedure but this has been declined ☐
or no further written information ☐

3 This procedure will involve:
General and/or regional anaesthesia ☐ Local anaesthesia ☑ Sedation ☐ None ☐

Signed (Health professional): _____ Date: 22.5.23

Name (PRINT): _____ Time (24hr): _____

Designation: _____ Contact/bleep no: _____

C Consent of patient/person with parental responsibility

Photography, Audio or Visual Recording

a) **I agree** to the use of any of the above type of recordings for the purpose of diagnosis and treatment. **YES / NO**

b) **I agree** to unidentified versions of any of the above recordings being used for audit and medical teaching in a healthcare setting. **YES / NO**

Medical Training
I agree to the involvement of medical and other students as part of their formal training.
YES / NO

Use of Tissue

a) **I agree** that tissue (including blood) removed as part of my routine care but not needed for my own diagnosis or treatment can be used and stored for BioResource which may include genetic analysis **YES / NO**
I have received the patient information sheet about the BioResource **YES / NO**

b) Where additional clinical information is needed for the purpose of ethically approved research, I agree that relevant sections of my medical record may be looked at and anonymised prior to release to researchers **YES / NO**

I have listed below any procedures that **I do not wish to be carried out without further discussion.**

I confirm that the risks, benefits and alternatives of this procedure have been discussed with me and that my questions have been answered to my satisfaction and understanding.

I have read and understood information given to me about the planned procedure.

I wish to proceed with the planned procedure.

I therefore give my consent to the procedure as described

Inpatient/Outpatient Clinical Notes

Note Details	Clinical Notes
Inpatient Discharge Summary Episode/Ref: I0002170523 Dr Alan J Jaap 06/10/2008 Christina Hood	DIAGNOSIS: ,1. Overdose of Paracetamol and Sleepeeze, whilst intoxicated with alcohol and taken impulsively, but with true suicidal intent, suicidal ideation and actions precipitated by recent psychosocial stressors.,2. Harmful use of alcohol, Cocaine, and Amphetamines.,3. History of recurrent depression treated in Primary Care. ,,Specific treatment required: N Acetylcysteine therapy due to combination of moderate Paracetamol level and high risk of hepatic damage due to harmful use of alcohol. ,,Patient detained under the Mental Health Act: NO,,PSYCHIATRIC ASSESSMENT: Miss McDonald took an overdose of 32 x 500mg Paracetamol tablets and 20 Sleepeeze tablets yesterday evening; she was found by her friend with whom she had had an argument shortly before. She had drunk around 10 units of alcohol (beer) and self harmed to her right wrists, requiring sutures. She described clear suicidal intent at the time of the overdose, with intermittent thoughts of suicide in the last 2 weeks, these thoughts appear to be directly a result of multiple recent social stressors:,,· Break up with her partner of 2 years, as she had been having an affair.,· Stress of an imminent court case (27th October 2008) to consider access and visitation rights for the father of her older children (aged 11 and 12, who live with their paternal grandmother). ,· Conflict among family members.,,These factors have led to difficulty coping. She has 2 children, for whom she is the full time mother, aged 7 and 4, at home. She appears to be coping with this aspect of her life adequately. ,,PERSONAL & SOCIAL HISTORY: She is the oldest of 7 siblings, and was raised by her grandmother up to the age of 8, and then by her mother. Both she, her mother and her siblings, were the victim of physical violence from her mother s abusive partner between the ages of 8 and 14. She was placed in foster care from the age of 14 to 16. She describes being raped on her 15th birthday, and was reluctant to discuss further details of this. She became pregnant at the age of 15, and had her first child at 16, and her second at 17. Her partner at the time was abusive, and kidnapped and tortured her leading to the end of this relationship.,,She subsequently married, but her husband was alcoholic and violent at times. She has 2 children, aged 7 and 4, by this relationship. Her most recent relationship (which ended a few weeks ago) was for 2 years. She described how he was a good man, but I managed to fuck that up too . She describes variable alcohol intake, from 30 to 80 units per week, and harmful use of Speed Cannabis and Cocaine over many years. Her use of these substances has remained fairly static over several years, although her alcohol intake may have increased in recent weeks.,,MEDICAL & PSYCHIATRIC HISTORY: She has been treated for recurrent depression over several years, with a variety of SSRI s including Fluoxetine and Sertraline. She was unsure if they have had had any affect. Medical history includes pelvic inflammatory disease, sterilisation and previous overdose (several years ago).,,MENTAL STATE EXAMINATION: Appearance and behaviour young woman with neatly styled hair and clothes. She appeared tired with a black eye on the left (apparently an accident inflicted by a beer can), intermittent eye contact and mild psychomotor retardation. She smiled appropriately on one occasion, appeared angry at other times, and was dejected when talking of recent stressors. Speech decreased in volume, normal in rate, variation and tone. Mood subjectively I have been feeling like I m having a nervous breakdown the last couple of weeks just can t think straight . Regarding suicide attempt she said I can t even do that properly, can I.? . She added I ll have to face my children, my mum, my friends, I feel stupid . She was unsure whether she would reattempt suicide, but cited protective factors, namely her children and the social support from her mother and 2 friends. She was able to guarantee her short term safety. She is making some plans for, and can visualise, a future and intends to attend Court at the end of October. ,,Objectively reactivity was largely maintained, but she had a somewhat flattened affect. Thought and perception nil psychotic, cognition not assessed. Insight partial, she is aware that this suicide attempt may partly have been a cry for help but was unsure of this. In addition she was willing to access help from Mental Health Services in the future. ,,PLAN: ,,1. I will refer her urgently to the primary Care Mental Health Team based at Gracemount Surgery for assessment of:,§ Psychosocial support needs.,§ Need for further assessment plus or minus treatment of depression.,§ Further assessment of her ongoing suicide and self harm risk.,§ Possibly addressing her harmful use of alcohol, Cocaine and Speed.,,2. Advice on reducing her alcohol and drug misuse, although her motivation to stop appeared limited. ,3. I have also provided telephone numbers for Crisis Services.,4. Discharge once NAC therapy complete.,,,Yours sincerely,,,,,Dr Neelom Sharma,ST4 in Liaison Psychiatry,,Cc: The South South East Primary Care Team, New Gracemount Medical Centre, 24 Gracemount Drive, Edinburgh EH16 6RN,,

Inpatient Discharge Summary Episode/Ref: I0002493859 Mr Jerard Ross 06/04/2010 14:39 Jacqueline Mason	DIAGNOSIS: Lumbar radiculopathy (M51.1),PROCEDURE: None,FOLLOW-UP: To be readmitted for surgery in due course,,SUMMARY:,This 30 year old lady was referred to the neurosurgical department on 25th March 2010 and was reviewed in PIU on 31st March 2010. She has been suffering with low back pain and bilateral sciatica since November 2009. The pain is constant and on the right side it goes as far as the little toe and on the left side the pain radiates to the heel. The pain is worse in her back compared to her legs. It is not relieved or exacerbated by changing posture. Charmaine was also complaining of paraesthesia affecting both lower limbs and occasional post micturition dribbling for a few months. ,,The patient is smoker, had problems with depression in the past and has four children. She takes Cocodamol, Ibuprofen and Mirtazepine. ,,On examination straight leg raising was limited to approximately 40 degrees bilaterally because of severe back pain but the sciatic nerve stretch test was negative. Power, sensation, tone and reflexes were normal in both lower limbs. ,,She underwent two MRI scans of her lumbar spine, the first in January and the second in March 2010. The MRI images were virtually identical. At L4/5 level there is a disc bulge that compresses the right L5 nerve root and causes minor compression of the left L5 nerve root. There is a smaller posterior disc bulge at L5/S1 level that touches but does not compress the S1 roots. I explained to the patient she will most likely need to be put on the waiting list for L4/5 discectomy. I have discussed the patient with Mr Ross, Consultant in charge, who has agreed to place this lady's name on the waiting list for L4/5 discectomy. ,,Yours sincerely, ,,,,Mr N Stavrinos,Specialty Doctor in Neurosurgery,,

Inpatient Discharge Summary Episode/Ref: I0002524926 Mr Jerard Ross 15/06/2010 11:04 Jacqueline Mason	DIAGNOSIS: Lumbar radiculopathy,PROCEDURE: L4 laminotomy and L4/5 right microdiscectomy and medial facetectomy on 20.05.10,FOLLOW-UP: Routine outpatient clinic,,HISTORY:,This lady with low back pain and bilateral leg pain since November 2009 was admitted electively for the above procedure. The procedure was uneventful and the leg pain improved significantly postoperatively. Charmaine received early input from physiotherapy and she was discharged home on 25th May with arrangements in place for a follow up appointment at her local Physiotherapy Department. We will see this lady again in the clinic in due course. ,,Yours sincerely, ,,,,Mr N Stavrinos,Specialty Doctor in Neurosurgery,,,

Inpatient Discharge Summary Episode/Ref: I0003767368 Dr Ross FE Murphy 14/10/2015 11:17 Susan R McBride	Dear Dr Duncan,,,Further to this ladies immediate discharge letter she was admitted with a collapse and subsequent shaking episode, routine bloods on admission were unremarkable as was a Chest X-ray.,,These were not felt to represent seizures and she was noted to be having a stressful time prior to admission. She has not received any specific treatment during her admission and was discharged feeling well a couple of days later.,,I notice that the urine cultures were positive for Enterococcus which is sensitive to Amoxicillin and Nitrofurantoin. This was sent on the 16th and is documented that she has had no urinary symptoms at the time of admission. Obviously this is now several weeks old and I suspect that it is not clinically relevant, however maybe useful in the future should she represent with urinary symptoms.,,Kind regards,,Yours sincerely,,,Dr Anne Jones,Medical Registrar,,

Inpatient Discharge Summary Episode/Ref: I0000128365 Dr AM Paterson 12/03/1998	,Diagnosis: ?Presumed PID,,This young lady was referred to Ward 34 as an emergency via A&E two hours after being discharged from the surgical ward with presumed PID. On examination she was extremely tender supra-pubically. High vaginal and endocervical swabs were taken and she was admitted overnight. By the next day she was feeling a lot better and was therefore discharged on antibiotics that had been commenced whilst on the surgical ward. Her chlamydia swab has subsequently come back positive and she should therefore be receiving an appointment from GUM shortly.,,Yours sincerely,,,,,N. Smithson,Senior House Officer to Dr A Paterson.,,,

Inpatient Discharge Summary Episode/Ref: I0000128367 Dr HD MacPherson 21/06/1999	Charmaine was admitted as an Emergency to Ward 35 on 21 6 99. ,,She is a para 2+0 and attended with a weeks history of lower abdominal pain. She had had had some PV discharge and some mild dysuria. She has had no PV bleeding but also complained of deep and superficial dyspareunia. ,,Her LMP had been one week previously and she had had no nausea or vomiting. ,,She had had a similar pain to this before six months ago and had been admitted and given antibiotics for ? PID. ,,She is working as a Prostitute and currently takes Diazepam but denied any injecting of drugs. ,,On examination her abdomen was soft and tender in the lower abdomen. Speculum revealed a cervical polyp at 10 o'clock and a HVS and chlamydia swab were taken. Pregnancy test was negative. Full blood count revealed haemoglobin 131, white cell count 7.0 and platelets 218. MSU was negative.,,A diagnosis of likely PID was made and she was treated with Cefuroxin, Metronidazole and Azithromyacin. She settled over the next few days and was discharged home on a course of antibiotics. We do not plan to follow her up but the patient did state that she would quite like an HIV test. She was advised to attend GU Medicine for this. ,,,Yours sincerely,,,,Penny Burgess.,SHO to Dr MacPherson. ,,PB/tem/3112791012/ln.,14 July 1999.,,

CLINICAL INFORMATION

Reason for Referral:	? disc prolapse
Main Referral Text:	For attention of Mr Gerard Ross, Consultant NeurosurgeonDear Mr RossThis 31 year old lady underwent an L4/5 microdiscectomy in May 2010. She had been experiencing bilateral sciatica prior to her operation and has had no problems on the left side since surgery. On the right side she has had numbness affecting the thigh with paraesthesiae affecting the leg and her right leg has been giving way, resulting in falls. No bladder or bowel symptoms.There was lumbar tenderness with marked restriction of spinal flexion and very limited straight leg raising on the right side with 50 degrees on the left. Lower limb reflexes were intact. I am concerned that this lady may have some disc prolapse or some form of nerve root compression and I would be grateful if she could be reviewed at the clinic once more to decide whether, for example, a further MRI of her lumbar spine would be merited. I would be grateful if she could be seen soon.Many thanks.

CLINICAL INFORMATION

Reason for Referral: ? disc prolapse

Main Referral Text: For attention of Mr Gerard Ross, Consultant Neurosurgeon

Dear Mr Ross

This 31 year old lady underwent an L4/5 microdiscectomy in May 2010. She had been experiencing bilateral sciatica prior to her operation and has had no problems on the left side since surgery. On the right side she has had numbness affecting the thigh with paraesthesiae affecting the leg and her right leg has been giving way, resulting in falls. No bladder or bowel symptoms.

There was lumbar tenderness with marked restriction of spinal flexion and very limited straight leg raising on the right side with 50 degrees on the left. Lower limb reflexes were intact. I am concerned that this lady may have some disc prolapse or some form of nerve root compression and I would be grateful if she could be reviewed at the clinic once more to decide whether, for example, a further MRI of her lumbar spine would be merited. I would be grateful if she could be seen soon.

Many thanks.

CLINICAL INFORMATION

Reason for Referral: MRI Lumbar Spine

Main Referral Text: Lower back pain and sciatica. Has had a previous L4 laminotomy and L4/5 right right microdiscectomy in May 2010. She has noticed a deterioration in her lower back pain progressively and that the pain radiates to both lower limbs to the toes on the right foot and the knee on the left. Her last spinal MRI was on 27 July 2011 and a small disc protrusion was noticed at the right lateral recess at the L4/5. She has had some slight urinary frequency and urgency but no peri anal numbness. Lower leg reflexes intact. Straight leg raising 50 on the right and 80 on the left.

I would be most grateful if any progression of her disc protrusion, since her last MRI scan in 2011, could be excluded. Many thanks.

CLINICAL INFORMATION

Reason for Referral: MRI Lumbar Spine

Main Referral Text: Low back pain and sciatica. Please find attached the original referral. Unfortunately, this lady did not attend an appointment earlier this month for MRI spine as she has moved addressed and not informed the GP practice.

Original referral - previous L4 laminectomy and L4/5 right microdiscectomy in May 2010. She has noticed a deterioration in her lower back pain progressively and that the pain radiates to both lower limbs to the toes on the right foot and the knee on the left. Her last MRI spine was 27 July 2011 and a small disc protrusion was noticed at the right lateral recess at the L4/5. She has had some urinary frequency and urgency but no peri anal numbness. Lower leg reflexes intact. Straight leg raising 50 on the right and 80 on the left. I would be most grateful if any progression of her disc since her last MRI in 2011 could be excluded.

Please note that this lady is moving house soon. Please can you send her appointment to: Flat 4, 5 Matthew Street, Edinburgh EH16 4GZ.

Many thanks.

CLINICAL INFORMATION

Reason for Referral:	Worsening back pain
Main Referral Text:	I would be grateful if you could arrange to see Charmaine once more due to her worsening lower back pain. She had had a previous L4/5 microdiscectomy which had resulted in some improvement in the past but this has since got much worse. She had also received injections to her back which did help for a short time but her pain is currently much worse. She has requested another review by yourselves and I would be obliged if this could be done in due course. Many thanks for your help.

CLINICAL INFORMATION

Reason for Referral:	Chronic back pain.
Main Referral Text:	This lady has longstanding back pain and underwent a lumbar microdiscectomy in 2010. This gave her short lived relief but she soon developped pain again. She is on an unpleasant mixture of amitryptiline, DHC and pregabalin as well as the odd diazepam, NSAID. She had an L5 nerve root injection in 2015 which to allaccounts gave her good relief for some 15 months. For some reason, her analgesia has been escalated rather than referring her back for something that had a good effect. Could you do it again. Hopefully that will allow me to reduce her drug load consequently. She is relatively new to us and no summary has been done yet. Her PMH includes depression, loop excisions of the cervix and past self harm. Many thanks for seeing her again.

Investigations

Description	Result	Date
Is the patient currently seeing a psychologist, psychiatrist or CPN? :	No	
Description of pain (e.g. severity, pattern, patient experience) :	anaesthesia, stabbing	
What is your working diagnosis/explanation of the cause of pain? :	nerve compression and functional pain	
In your opinion, is the patient open to the idea of self management on pain? :	Yes	
Has this been discussed with the patient? :	No	
Is your patient coping with the DISTRESS caused by pain? :	Well	
Is your patient coping with DISABILITY caused by pain? :	Well	
What is your primary expectation of referral? :	Medical Management	
What is your patient's primary expectation of referral? :	Medical Management

CLINICAL INFORMATION

Reason for Referral:	large ganglion on dominant wrist
Main Referral Text:	Dear colleagues I would be grateful for you assessment of this lady hwo has a large ganglion on the palmar aspect of her left wrist and is left handed. She suffers from chronic pain but has rcnently started a part time job at Tescos. The ganlgion has been there for some time, but has recently become much bigger, measuring at least 2cm in diameter and considerably raised. She is complaining of pain radiating into her thumb, as well as proximally along her forearm. I thoguht I might be abe to give her some temporary relief byt draining some fluid form the ganglion, but my attempt was unsuccessful so I desisted. With many thanks for your help Jenny Bennison

CLINICAL INFORMATION

Reason for Referral: wishes further L5/S1 nerve root injection FAO Dr Marples

Main Referral Text:
Dear Dr Marples
this lady has had a very satisfactory result form her last injection in Sep 2017 (see letter attached) and wishes to have another as she feels it is wearting off somewhat now. She remains on high doses of anagesia, but thinks she may be ready to reduce after her next injection.
I wonder if it is possible for her to rrange these directly without us having to make a new referral each time?
many thanks
Jenny Bennison

CLINICAL INFORMATION

Reason for Referral:	further nerve root injection please
Main Referral Text:	This lady is well known to the clinic and has generally had good benefit form her injections. The last one, however, was less notceable in its effects. She is however managing to heold down her job, but is worried that things might worsen with colder weather in the winter, so I wondered if she could be seen again later in the autumn please for consideration of further injection. with many thanks Jenny Bennison

CLINICAL INFORMATION

Reason for Referral: Rrquests further injection for chronic back pain

Main Referral Text: This lady is well known to your service and last had an L%/S1 nerve root injection under X-rya control in February this year. As ever, results were goo, but she is beginning to experience a recurrence of her symptoms and hopes wshe will be able to have another of these before too long.

she continues to function very well, working full-time and doing regular yoga sessions. We have managed to get her off pregabalin altogether and her dhc dose is down to 120mg MR daily nond

many thanks

Jenny Bennison

CLINICAL INFORMATION

Reason for Referral:	chronic back pain
Main Referral Text:	This lady who has chronic back pain following a back injury has requested a re-referral to you. She had 2 L5/S1 nerve root injections with very good results in the past. Her last one was in 2020 and gave her great relief for a good 18 months and enabled her to reduce her DHC use significantly and is working full time now. The pain is getting more intense and asked for another nerve root injection. Could you do this for her please? Many thanks!

Investigations

Description	Result	Date
Is the patient currently seeing a psychologist, psychiatrist or CPN? :	No	
Description of pain (e.g. severity, pattern, patient experience) :	Chronic back pain	
What is your working diagnosis/explanation of the cause of pain? :	mechanical back pain	
In your opinion, is the patient open to the idea of self management on pain? :	Yes	
Has this been discussed with the patient? :	Yes	
Is your patient coping with the DISTRESS caused by pain? :	Well	
Is your patient coping with DISABILITY caused by pain? :	Well	
What is your primary expectation of referral? :	Medical Management

CLINICAL INFORMATION

Reason for Referral:	Recurrent knee pain. Our practice doesn't have a physio
Main Referral Text:	Right knee pain Happened 5 or 6 times over the past years. The flared ups normally last a couple of weeks. Has locked a couple of times. Not giving way. Current episode started last Thursday. No known trauma. At work - stands all shift. Inside of the knee hurts - clicks. Painful to walk on it. Has tried resting it. Outside is swollen. Saw physio once only – she wondered if it could be gout. This episode is not in keeping with gout. O/E: Tender and warm on palpation right lateral aspect of knee. Mild swelling. No tenderness on palpation medial knee. Ligaments intact. Full range of movement. Able to walk. Is using ibuprofen, dihydrocodeine and her lidocaine patches. Imp: Loose body. ?meniscal. Plan: Ice, Elevate. Hopefully will settle with time. Would like to see physio

CLINICAL INFORMATION

Reason for Referral: ? abdominal wall hernia

Main Referral Text:

Dear Doctor,

I would be grateful for your assessment of this 43yr old sterilised para 1 who presented with 2d of LIF pain which started whilst she was at work in supermarket customer services. She developed pain and a firm lump in the LIF. It was consistent pain and not collicky in nature and she had to resort to 2 x co-codomol to get comfortable. It eased off a little since it first started and she couldn't feel the hard lump by the time of her appointment today. Her stools have been a little loose since it started. She has no urinary symptoms and is approx 10d until her period is due. She says she doesn't do much heavy lifting at work, just a lot of standing.

On examination she was not acutely unwell. moving comfortably. abdo soft. tender over LIF. no abdo or L inguinal masses. BS active.

Your opinion as to whether are symptoms are caused by an abdo wall hernia would be much appreciated.

Yours sincerely,

Dr S MacCallum

CLINICAL INFORMATION

Reason for Referral: Another nerve root injection

Main Referral Text:

Dear Doctor,

Thanks for seeing and treating this 44yr old previously who has had L3-5 'removed' with secondary longstanding nerve pain. She presents today with a flare up of lower back pain with some R leg pain. She has been off medication for 1yr after having nerve root injection from hospital which has been really helpful. had just been managing with PML and a muscle rub. tries to keep moving. Now hard to walk or do anything much. possibly triggered by looking after 10mth old grandson - lifting and being busier.

bladder and bowels working ok. R leg mostly working ok. occasional giving way. no L leg pain.

She is looking for co-codomol and refer back to pain clinic for nerve root injection. TCA made her feel quite spaced out. not keen to manage with medication but feels needs something to help her just now.

I have strongly encouraged to reduce lifting grandson for now to allow flare to settle and given her some co-codomol as well as suggesting swimming, pool walking or aquafit to help her keep active. If she was eligible for another nerve root injection I think that could be very helpful for her.

Yours sincerely,
Dr S MacCallum

CLINICAL INFORMATION

Reason for Referral: FAO Spinal clinic please

Main Referral Text:

Dear Colleague,

I would be grateful for your assessment of this 44 year with a marked deterioration in her back pain over the last 3-4mth despite taking steps to reduce the amount she lifts her grandchild. She has pain across her lower back, particularly on the R which radiates with a dull, aching pain into her legs anteriorly and posteriorly as far as both knees. Her legs are feeling shaky and can give way after a few steps. She has no saddle anaesthesia, or loss of bladder or bowel control but is passing urine more frequently. She is reluctant to use opiates due to previous dependence. She remains as mobile and active as she can. She has had a previous L4/5 discectomy and had benefit from lumbar nerve root injection which she is the waiting list for from the chronic pain team.

On examination she looks uncomfortable and slowed up when moving, there is nil abnormal to see, and she is tender over her R sacrum and upper buttock with no heat, swelling or redness to the skin. There was no lumbar spine tenderness. She had good ROM with flexion, extension and lateral flexion. Her SLR was reasonable and she had no pain on internal and external rotation at the hip. there was no loss of sensation and her reflexes were normal at both knees

Given her bilateral symptoms, I wasn't sure if a repeat MRI was warranted. Your input is much appreciated.

Yours sincerely,
Dr S MacCallum

CLINICAL INFORMATION

Reason for Referral: Chronic Pelvic Pain

Main Referral Text:

Dear Colleagues

This 46 year old has a 12-18 month history of cyclical LIF pain often flared on opening bowels. She is a para 4+0 (all SVD's) and was sterilised 22 years ago a year after her fourth delivery. She had a ruptured ovarian cyst in 2024 on the left and admission in spring of 2025 with a recurrence of her pain, USS showed no cyst recurrence but presence of small fibroids and was told these may be causing her pain, at this time she was treated for BV, PID swabs -ve. Since this admission her pain has been worsening. She continues to have regular periods 24-28 cycle with 5 days of bleeding. There has been no new discharge or intermenstrual bleeding and she is not currently sexually active. She is currently on HRT (evorel sequi patches) for mood and for feeling 'slowed' with some improvement. Examination was unremarkable with no LIF masses palpable.

She has a background of chronic back pain for which she takes regular co-codamol and does not want to consider TCA's as an add on. She has been encouraged to consider the Mirena coil as the progestogen component fo her HRT in the hop that this may improve her pain and I have referred for a further USS, but she is keen to explore other pain management options for her pelvic pain and I am referring her to general gynae to see if these can be considered.

With thanks

REFERRING PRACTITIONER DETAILS

Name:	Dr Nathan Sharp (GMC: 7545575)
Practice:	Niddrie Medical Practice (70198)
Phone:	Voice : 0131 652 2004

Practice address

Craigmillar Medical Centre
106 Niddrie Mains Road
Edinburgh
EH16 4DT

CLINICAL INFORMATION

Reason for Referral: Chronic Pelvic Pain - USS showing Multiple Fibroids

Main Referral Text:

Dear Colleagues

This 46 y/o has a BG of chronic back pain and is known to Dr Marples in his pain clinic. She had a ruptured left ovarian cyst 2 years ago and since then has had increasing left lower quadrant pain impacting her day to day function, stopping her from working and is present daily. She has regular periods (every 24-28 days with 3-4 days of light to moderate bleeding), she does not report an increase in pain level at the time of her menstruation. She is a para 4+0 was sterilised 22 years ago a year or so after the delivery of her fourth child. Additionally she is on HRT (evorel sequei) for anxiety, fatigue and concentration symptoms suspected to be contributed to by the perimenopause.

As part of the work up for her pelvic pain she had a recent USS which ahs shown multiple uterine fibroids increasing in size (largest only 3x2x3cm however) and number from previous scans but no cyst recurrence.

Her pain is currently severe and not controlled on taking Ibuprofen 600mg TDS and QDS 2x 30/500 co-codamol (she has declined a TCA or other neuromodulator for fear of addiction). Given her pain I was wondering if you would consider seeing her as an outpatient I would be surprised if this was all coming from her fibroids but if this was contributing could her HRT be increasing their growth? her history is also not markedly in keeping with endometriosis (denies PR symps and no cyclical element) but regardless will discuss with her the Mirena coil and how it may be of benefit both from pain and HRT perspective. I am also unsure if can refer directly to this service or if she needs seen first by a gynaecologist but she has done well from a back pain perspective with chronic pain team input and I am wondering if she would be a good candidate for the EXPECT pelvic pain service. I have marked as urgent given the pain severity nd imapct

With thanks

Pre-existing conditions (High & Medium Priority)

Description	Modifier	Extension	Start Date	Date Recorded
Fibroids			16/03/2026	16/03/2026
Ovarian cyst NOS		- ruptured haemorrhagic cyst, left ovary	21/03/2024	21/03/2024
Pre-diabetes			28/03/2022	28/03/2022
Injection given		right L 5/S1 trasforamial erve root injection under x-ray control done at pain clinic	03/02/2020	03/02/2020

Past procedures (High and Medium Priority)

Procedure	Comment	Modifier	Date Performed	Date Recorded
